An alternative would be a non-random length dipole resonant on several
swl bands without the need for an antenna tuner. See...

http://www.universal-radio.com/catalog/sw_ant/3377.html

I used to have the sloper version of the above. Worked great.

But did you hear the GPS status report? At 0:44 UTC, WWVH played
that, but it was about 20% slow! The propagation report at 0:45 was
on the right speed. (I'd have expected that to be on a computer by
now, I guess they still use analog tape..).

> Horrors! Heresy! Why is this station greeting dx'ers who won't show up
> on their ratings book. Are they mad?

It is really hard to keep talent from wanting to mention distant listeners, and it does add a "bigness" if not overdone. Essentially, it is a fallback to decades past when there were fewer stations in more rual areas and folks had to listen to distant signals.

WHO, like regional signals such as WMT, WNAX, KFYR and KFGO, used to be huge billing stations based on thier agricultural coverage. As the owner operated family farm dwindled, and farmers could get weather and commodity prices on pagers and cell phones, agribusiness advertising has fallen about 90% from the 60's.

So you are hearing the end of an era on one of the few 1-A stations that has enormous groundwave coverage (due to conductivity in the prairie states). Few other stations do this or care. And, I believe, WHO was always the smallest of the 1-A clear channels in terms of listenership and revenues.

Remember, there are only a handful of stations with as much protection as WHO. 640, 650, 660, 670, 700, 720, 750, 760, 770, 780, 820, 830, 840, 870, 880,890, 1020, 1030, 1040, 1100, 1120, 1160, 1180, 1200 and 1210 are all there are vs. nearly 5000 AMs that can not provide regular, reliable skywave today.

> encouraging them.

If I am not mistaken, the IA state fair takes place within the groundwave coverage area of WHO, and a tour to visit the maritimes would be directed at WHO listeners who want to travel to new places, not to listeners in the Maritimes (where WHO can rarely be heard, even by DXers with excellent equipment).

It is nice that they get support. I had an SW license years ago and truned
it in as there was no way I could afford to keep it running.

Actually, at this point we are talking about the selling of radio in
general.

My experience is that local listeners are FM listeners, unless they
are sports or talk radio. Yes, KOA does very well, but they have a
niche.

> your whole point is bvery confusing. And no Denver FM covers down
> to New Mexico.

Raton Pass. Look it up. I know my state, sir.

Actually, I do know that. (Better tell Reg Edwards... but I
digress...) ...I also know that AM will fill the holes that FM
stations can't.

But FM, last time I checked, outperformed AM. (No doubt, measuring
the local market only...)

>

>
> It is telling that you had to go back 50 years for one of your examples.

Actually, I picked ones that I 1) personally knew about and 2) would
be common and unambiguous. For example, I didn't include the various
clear sodas -- Pepsi Ice? -- because I don't know if that was a test
market thing that bombed or a full-fledged rollout that bombed.

Yet marketing-driven items can, do and will fail. New Coke is the
perfect example of everything being done "right" by marketing
principles and it all went wrong.

>
> But, even if they do get a listener or tow at night outside the Cicny MSA,

In other words, what they do doesn't reflect reality. Your "listner
or tow [sic]" is probably more like 10 here, 20 here, 5 there, adding
up to the hundreds to thousands.

>
> You are trying to quantify on a grand scale something that does not matter:
> night DX AM lisatening.

It doesn't even necessarily have to be night listening, and I do not
view the listener of MW BCB who does so purely for the program content
as "DX." Especially when it doesn't have to be that far. Growing up
in Cleveland, my parents' station was WJR, Detroit and mine was CKLW,
Detroit/Windsor.

> You can go through the Arbitron diaries for east
> Overshoe (every US county is rated at least once a year) and you will not
> find that WLW gets ratings.

Because the listener count doesn't cross a certain threshold. The
problem is, though, that there are a *lot* of East Overshoes out
there. I'll say it again: No one is asking you to advertise East
Overshoe Laundramat; the idea is to be aware of the sales in the local
market that are created by non-local buyers.

> So, statistically, it is not a factor even if in
> reality one or tow people listen occasionally.

Statistically, your odds of winning the Lottery are 0. The odds of
someone winning the lottery, however, are quite high. But you are
saying that because the odds of any individual winning is 0, the odds
of someone winning must also be 0. It's a statistical fallacy.

>
> When you have, for example, 1.6 million listening to KFI in the LA market,

> make a material change in eithe KFI or the people who hear ads on KFI.

But that 3 or 4 might be much higher than that, but are pre-filtered
by Arbitron. The only "material change" that your advertisers care

about is someone who makes a sale. The guy who owns a Porche in
Needles certainly isn't going to Fred's Garage in Needles to get it
serviced -- he'll go to where it can be done, in LA. And your Porche
dealer advertising there might get his interest piqued.

> And, in most places in the Southwest, Mexican staiton interference has made

Perhaps -- that's a believable explanation. However, CKLW, targetting
the American audience, had to contend with PJB being a flamethrower on
that same frequency ALSO targetting an american audience. Usually
CKLW won out in the northern states, but I recall one evening of freak
atmospherics where CKLW was overwhelmed by PJB in Cleveland.

The questions they could have asked were, "Have you lost telephone
service in the last year?" or "How many times have you needed to
contact qwest in the past 12 months for loss of telephone service?"
or "Was your telephone service restored within 3 days?" or "Was your
telephone service restored with only one service call placed?"

Feelings aren't measurable in such a survey. The above numbers are.

> LA ad rates on major staitons are in the $1000 to $2000 per spot range. In

(sigh) here we go again. You don't sell ads to a local Riverside /
San Bernadino location; you sell (and track) information regarding an
LA business which may also be of practical use outside of LA. Not to
Riverside, but *anyone* outside of LA. The example I come up with
again and again would be J&R advertising on WABC. J&R is a New York
City store with a national clientele. You should make use of that
fact. (J&R isn't the only one in the known universe with these
features.)

> > Don't feel too bad, though, you have company: Clear Channel thinks

>

That's why listeners hold Clear Channel in such high esteem? I recall
reading late last year how people have been flocking in droves to NPR,
looking for something -- *anything* -- worth listening to. When
you've chased your listener base to NPR, you've accomplished
something.

Oh, I know, Clear Channel will continue to thrive for a while, since
people *tolerate* -- not enjoy -- their product.

Look: You want a local audience? Use a local medium, like FM. We
should have done what Canada did and opened up a new, different band
solely dedicated to digital broadcasting without butchering up the two
BCBs we have. But we didn't. And now, people who complain will be
ignored because they aren't local listeners. But those people who
complain are real, just like your non-local listener base is real.
And you will lose them, along with the 10 people who don't complain
and just tune out.

I like the ROM memory feature the best. I can find China Propaganda Intl.
quickly!
The AN-LP2 is a pleasure to use since it is "tuned" by the SW07 unlike the
AN-LP1.
No more forgeting to dial-in the band.

I find the ergonomics of the SW100 better than the SW07.
I like the robust build of the SW100 and its James Bond 007 look and size.
"Don't leave Langley without it!" - indeed.

Of course, the speaker on the 7600GR is superior to either of the above and
the 7600 buttons are a releif to use after a session on the tiny SW07 or
SW100 keyboards.
BUT, I dislike using the side slide switches for ssb and sych detector. The
analog ssb "clairifier" is tedious in my opinion although effective. I
guess I have grown to like digital tuning ssb in steps on the front keypad.
But if I wish to seriously(?) listen to hams or utility voice stations than
the analog ssb tune is better. I'm just spoiled by a real VFO on my Icoms.

> I like the compact size of the SW07, but it's a rare occasion
> that I find its performance appreciably better than that of the SW7600G
> or GR.

The SW07's & SW100's Sych Detector is better than the 7600GR.
Comparing the performance while using the AN-LP1(2) on all three radios I
give the performance edge to the SW07 & SW100 over the 7600GR. The
combination of improved synch detector and slightly more sensitivity on the
SW07 & SW100 edges out the 7600GR. Although these differences are certainly
not staggering they are noticeable.

The 7600GR, SW100, SW07 each have their own strengths and weaknesses.
All of them minor. They each fit a niche. I enjoy operating all of them
along with my SW-55 and
big boy Icom rigs.

Needless to say I have enough portables. So I am currently contemplating a
software defined radio or that new German made DRM radio expected to come
out later this year. My Icoms are becoming aged.

Now, back to Pyongyang radio . . . the Bolshevik Anarchists are here!

Just as an aside, when I was 19 and living in Casper, WY, there was no local station that I could stand to listen to for more than a few minutes at a time. I worked for the local CATV company as an installer. Their trucks had no radios in them, so I was stuck with bringing my own. What I could afford was an old off brand 6 transistor pocket radio that I could leave on the dashboard as I drove around. My station of choice as I went about my workday? KOA. Loud and clear. Great daytime coverage, that.

> general.

Since FMs seldom get any coverage outside their own metro are, let alone ratings, the point is moot.

Only when there are two metros that touch each other and are very close do you see this at all, and most is A, not FM.

A good example is the Miami FMs... (whatever city in the MSA they "belong to") where most have a tiny share of listening in West Palm Beach, a separate market per Arbitron. The shares are so small they are unmarketable at any price, since they do not represent very many people and are all to the southern side of the market.

Similarly, the Riverside / San Berdoo market gets coverage by some LA stations part way into the market geography. Since the IE is a shadow market and has relatively few stations, a number of the bigger LA FMs show up, as do a couple of AMS (only two or three LA AMs are listenable there) as the IE is on the "backside" of the mountain where many of the biggest LA FMs are grandfathered with superpower (some as much as 100 kw at 5,000 feet AMSL). A real exception.

This is why there are less than 400 stations in the whole USA that have ratings outside their home market. There are only about 25 cases where a station has ratings that are above "half way up the ranker" anywhere in the USA. So, we are discussing only a handful, at best, of stations that have competitive listening levels outside the home market.

>
> My experience is that local listeners are FM listeners, unless they
> are sports or talk radio. Yes, KOA does very well, but they have a
> niche.

Nationally, about 40% of Americans use AM, and about 85% use FM. In some markets, AM usage is higher, and in others, lower. An example of high AM usage is San Francisco, where only 3 stations fully cover the metro, all AM, and no FM does due to terrain. On the other hand, in Washington, DC, AM

usage is much lower due to the horrible signals in the market... even the all news station is on FM there.

AMs that are successful are either in the news/talk/sports arena, or in the ethnic/religion/specialty arena. To be one of the first, you must have a monster signal. To be one of the others, you must be gospel, teaching & preaching, in a language like Russian, Korean or Kreyol (generally not Spanish) or be a brand extension, like Radio Disney.

>
>> your whole point is very confusing. And no Denver FM covers down
>> to New Mexico.
>
> Raton Pass. Look it up. I know my state, sir.

Picky. No Denver FM has a city grade signal (70 dbu) that gets south of Larkspur. None has a 60 dbu that gets more than 2 to 3 miles to the north of Monument. None even has a 54 (protected) contour that gets to Colorado Springs. Just like I can occasionally DX on inversions San Diego FM stations in Burbank or get a couple of Phoenix stations on FM in Prescott, there are no Denver FMs that get anywhere close to NM except on rare and occasional skip... in fact, all the Denver frequencies are duplicated with closer operations than Denver at nearly any frequency. At minimum they have powerful adjacents very close by.

And FM covers identically day and night, while most AMs have vastly reduced night coverage.

>
> But FM, last time I checked, outperformed AM. (No doubt, measuring
> the local market only...)

All radio ratings measure all listening, including satellite and internet streams. Were any distant signals to have any significance, they would show in the ratings. They do not. The fact is, FM has more listeners in the average market and has since FM passed AM in listening share in 1978. At present, the shares are around 80% FM and 20% AM nationally, with exceptions, all dependent on how good local signals are in the local market.

Again, the reason is that FM covers today's sprawling metros better than 99.5% of AMs (meaning all but maybe 30 AMs in metros do not cover their market day and night well enough to be pleasant listening). Due to quality, AMs have gone to talk, but due to coverage, most have been pushed to the bottom of the stack.

It was a novelty flavor. These are like the green shakes at McDonalds, done for a while for novelty and brief sales, and then discontinued. Selling sodas in disposable rather than reusable bottles has made this viable and it is done all the time.

> or tow [sic]" is probably more like 10 here, 20 here, 5 there, adding
> up to the hundreds to thousands.

First, there are only a few stations that even get, consistently, outside their own markets. And we are talking about maybe a few thousand listeners outside the normal groundwave coverage for AM and none for FM. Let's take KFI in LA for a moment... an AM on the best 1-A channel in the USA. If it gets total listening at night of 200,000 persons in the LA market, and picks up another 5,000 on skywave listening outside the groundwave coverage, that is not enough to be significant. It is less than 2% increase, which is smaller than the margin of error of the whole survey.

Advertisers buy by the market, so that will not change. Advertisers do not buy stations that are not in the top few in the demographic they are looking for, so the minor stations will not get bought anyway (that is why they are ethnic, religious or whatever anyhow).

I gave you a list of stations that have the potential to get a signal reliably into areas outside their local groundwave coverage. You can add a few I-B stations like KWKH, KFBK, KGO, WMVP, etc to the list of ones that do get some, directional, skywave coverage, but after a handful of those, there are NO stations in the US capable of getting skywave without frequent interference, etc, to many listeners. The number of stations is so small, and the listening levels so low that no advertiser is going to look at this as anything except a tiny bonus to their existing buy providing the station is even on the buy due tolocal ratings.

> in Cleveland, my parents' station was WJR, Detroit and mine was CKLW,
> Detroit/Windsor.

The CKLW ratings were, for a while, good in Cleveland because the CHR stations there were on 1420 and 1260, both horrible AMs in suburban coverage, both to the east (neither night covers well even to Lyndhurst) and to the West as well. And in the time CKLW was a factor, FM was not. As soon as the FCC forced FM to develop, CKLW died in Cleveland, Sandusky, Toledo, etc.

CKLW was not "Detroit / Windsor" It was a Windsor station always, and used "The Motor City" as a euphemistic ID point.
>
>> You can go through the Arbitron diaries for east
>> Overshoe (every US county is rated at least once a year) and you will not
>> find that WLW gets ratings.
>
> Because the listener count doesn't cross a certain threshold.

The threshold is intended to make the results reliable statistically. One or two mentions could be form someone who vacationed a day or two out of town. Arbitron looks for a pattern of consistent, measurable listening within the market. If you add up the "outside groundwave" mentions you get nothing. I just did for KFI in PHX and Las Vegas and came up with two diaries in Phoenix and none in Las Vegas. Since each diary is representing approximately 1000 persons, that means that there are maybe a couple of thousand people who listened to KFI in the most populated areas that are skywave accessible... compared to way over a million total listeners in the market.

This is just not enough for any advertiser to care about. It does not give measurable impact outside the market, and goes nowhere in satisfying the needs in the other two markets.

> The
> problem is, though, that there are a *lot* of East Overshoes out
> there. I'll say it again: No one is asking you to advertise East
> Overshoe Laundramat; the idea is to be aware of the sales in the local
> market that are created by non-local buyers.

And nearly every East Overshoe has local stations. Since advertisers seldom buy ads on AM at night, and radio at night itself is not much used by advertisers, there is no gain for advertisers to use speculative, unsubstantiated data when they usually by with very complex reach and frequency matrix based systems that determine buys on cost per point in the target demo. Agencies are not going to rewrite their buying software toaccomodate a few listeners to a few 1 A AMs that get a couple of occasional skywave listeners.

> of someone winning must also be 0. It's a statistical fallacy.

The metrics for ad buys are based on real listening in the home market. the software makes no compensation for out of market coverage. This is just not going to happen, and introducing a fluctuating variable hurts radio overall as it makes people doubt the medium. Radio is bought by market at the station level. Even network or syndicated radio is bought by the total of the individual markets, even in RADAR (an Arbitron network product).

There is no filtering. The diary mentions are there to see. I just looked at them for two markets. the fact is, there are practically none of this type of listening mentions.

> The only "material change" that your advertisers care

The guy with the Porsche in Needles already knows where to take it. Most radio advertising is for goods and services that are available in every market of any size in the US. We are talking Wal-Mart, Bed Bath and Beyond, Exxon stations, Heinz catsup, coke and Pepsi, Allstate agents, Ford dealers. People who live in Needles who shop rodeo Drive already know where it is. We are talking mass market, and the only way to reach most consumers via radio is by local stations.

Actually, TWR on 800 was directional at South America at night. In fact,
form 10 PM to 4 AM EST it was in Portuguese for Brazil. It did not aim at
the USA at all. I have been there and owned a station on 805 in Ecuador that
got hit every night by the directional beam of TWR.

> Usually
> CKLW won out in the northern states, but I recall one evening of freak
> atmospherics where CKLW was overwhelmed by PJB in Cleveland.

I remember a 10 kw Venezuelan overriding WKYC on 1100 in Shaker Heights one
night. Atmospherics do this on occasion. It is not normal.

And CKLW when it had ratings was in an era when AM was bought differently
and when AM was dominant to the extent of being about 95% of all listening.
>>
>> Except that we do extensive field research on a monumental level.

No, you will never see it. But the fat that there are 40 or so companies
doing radio research for stations should indicate they know a lot about
their listeners.

I have no idea what they were surveying, but it could have been anything. If
they want a service satisfaction survey, they will do it. If they want to
ask about interest in a new service, they will not ask about existing ones
or about satisfaction.

> features.)

Again, advertisers with an interest outside of the local market buy advertising in the other markets they care about locally. They do not use shadow stations to do this, as that is hit and miss, especially on geography. It is just the way buyers do business, and radio can not change this. Since it benefits so few stations, there is no incentive.

For a while, we subscribed to the IE ratings, and tried to use the add on bonus numbers to sell with to make our stations more attractive. No way. All we got was a couple of hundred thousand in extra cost for the book, and no added sales. "We do not buy Riverside as part of LA for Radio... we buy it separately." It was not even good as a tie breaker to get an edge on a station with less than our Riverside delivery.

Since advertisers do not care, and can not be persuaded and there are so few affected markets and stations, this is a non-issue. Even if it made sense, thousands of advertisers and agencies are not going to change just to pick up a few extra listeners from a handful of stations. There is no incentive.

Actually, NPR ratings are downtrending. And most listeners have no idea of what Clear Channel is... they either like or dislike a specific station.

We did not have them to begin with on 13,300 of the US radio stations. Those that do do not care, so there is no loss.

You describe a close to the ground vertical loop antenna. I expect that at most you would need a 2:1 BALUN but the right answer might be 1:1 with the antenna that close to the ground. The loop is balanced and the coax is not so a BALUN is used here.

The loop is a complete antenna unlike the single wire antenna, which still needs a counter poise to complete an RF circuit. The counterpoise or RF return for the signal wire is the ground stake. Generally an optimal situation would be a voltage type transformer as a UNUN so the single wire and ground would be the primary and the coax on the secondary. The single wire is not balanced and neither is the coax so UNUN is used.

The loop as a complete antenna does not need the ground as a counterpoise. Useful construction tip would be to bury the coax or if that is not convenient then use clamp on ferrite for a RF choke to stop noise from the radio end of the coax on the outer shield from getting to the loop antenna then into the radio input. The clamp on ferrite would be a current type 1:1 BALUN.

WBCQ and WWCR seem to be making a go of it. Ever consider taking another
stab at a short wave station?

Basically (theoretically) an antenna made for transmit is just as
suitable for receive. This is called reciprocity.

This concept falls apart two ways in practicality:
1. The transmit situation has to handle power the receive situation does
not so for transmit the antenna elements need to be "beefier."
2. A less than full size antenna made resonant may work very well for
transmit but for receive not as well. Less than full size for receive
lowers the antenna efficiency.

The concept here is that on receive size matters so a dipole antenna
made for the lowest frequency band you want to receive will be a
multiple wavelength antenna on higher frequencies. The only rub here is
that it will not work well on even harmonics so be sure to pick a size
that ends up as an odd electrical harmonic length on the higher bands.

The license I owned was for a Tropical Band facility linked to HCSP1, 595
kHz, which I moved form San Pedro de Amagua&#65533;a, Pichincha, Ecuador in 1967.
After debating what to do with with the SW facility, we decided to put the
transmitter in a landfill after stripping it of parts, and turn the license
in.

If I had to deal with the kind of clients that are on WWCR and WBCQ, I would
rather quit and study for the priesthood.

Well that's just the way it is for electrically short wires. What you
missing here is the wire is half the antenna and the energy it picks up
is common mode and not just a function resonate length.

> >You compare it against a dipole and the dipole should show gain over

> not even a pro. :/ Are you suggesting I would be a better SWLer if
> I changed to random wires? That'll be the day... :/ LOL...

Well based on my reading of amateur news groups there is ham antenna
theory and then the theory the world actually operates on.

As you say LOL...

Laugh all you want. I'll just keep pointing out that the news group is
for short wave listening not ham radio. That the simplest antenna is a
Marconi type single wire antenna and if a listener wants to make an
antenna better than that he would expect a payoff in the way of stronger
received signals so one too weak before could now be heard, better
signal to noise or maybe directionality for various reasons. Please
consider your audience before posting or just keep on Trolling.

Your a good example of why I no longer read the amateur news groups and
am not a ham operator. Why would I want to go out of my way to talk to
someone like you.

Kind of odd to tune up a transmitter for this long. The frequency is
where the sync locked to the carrier.

That's a pretty funny response. I had a good laugh.

I would like to think (dream) that a commercial type short wave station
of some type would have a chance of being financially sustainable
offering programming not so repulsive to you.

Hey rtc,

Forgot to say *THANKS!!!!* for the link. Please forgive the omission. Soon as I get a little ahead, have to breadboard a Xtal radio, just like the old days.

The first time I put on those cans and heard two stations (at the same time) then tuning in others....And hearing Los Angeles at night in-between other stations....It was a blast.

Again....THANKS!

Eric

Budget control indeed. How was it used? That would be a peculiar
choice for product placement as the FR250, S350, and S350DL are all
more expensive and better-looking.

When I post whether a new thread or in this case a reply I try to be
informative as this is not like email where a reply would go directly to
you.

Hopefully other people reading the thread get a better idea of
what will work better for them. Besides there is no way for me to know
what you know or what experience you have except for what you explicitly
write and I have to guess the rest.

A level of knowledge a person has is an interesting thing in itself. Some people are aware of the reciprocity concept and leave it at that but you can always look at things in a deeper way that modify or even appear to reverse a rule.

My first radio was a crystal radio put together by my father because at
4 or 5 years old I'd have messed it up but I could operate it. I was
smart enough at the time to recognize the fact that I did not have to
wind it up or put batteries in it so it would operate as any other toy
I had needed something added to make it work. I got the concept that it
worked entirely off the energy it picked up from the antenna. It was
magical then and it is still magical to me now. Understanding how it
works takes nothing away from how marvelous a thing a crystal radio is
to me.

Crystal radios - batteries not included.

Most transmitting antennas use wire about the same size as what's
found in receiving-only antennas, 14 or 16 guage, maybe 12 guage for
full legal power.

>2. A less than full size antenna made resonant may work very well for

I seriously doubt you could hear the difference between a full size
antenna at frequency, and one slightly shorter for space
considerations.

Ever calculate antenna resistance at HF for those gauges? What is the
expected loss for some band you worked on?

What is legal power for hams on HF? 1500 watts? And is that continuous
power or PEP?

> >2. A less than full size antenna made resonant may work very well for
> >transmit but for receive not as well. Less than full size for receive

>
> I seriously doubt you could hear the difference between a full size
> antenna at frequency, and one slightly shorter for space
> considerations.

On receive the antenna efficiency is related to is size by means of radiation resistance. Antenna efficiency is directly dependent on the combination of radiation and antenna element resistance (DC+AC).

This affects the received signal power just like it does for transmit but like I said on transmit you can use materials with higher dielectric constants and reactive components to launch an EM wave efficiently. However, on receive you can't affect the environment around the antenna in the same fashion as the antenna itself therefor what I stated stands unless you can refute it.

The key here in the non-reciprocity of antenna performance is the fact that "you can't affect the environment around the antenna in the same fashion as the antenna itself." The environment around the antenna has an impedance value not affected by the antenna but antenna size directly correlates to radiation resistance.

Think about it. If you were right then everyone would be using a whip antenna. Why bother to build full size antennas?

That is not skywave coverage, as Brenda Ann mentioned. Today, with computer noise, ignition noise, dimmers, and all manner of other items, the daytime coverage that was useful in the 60's is significantly reduced by RFI.

Oh, in 1964 Casper had 3 AM stations, two of which were class IV's and one was a daytimer. Today, it has 4 AMs, one a 50 kw station, and 11 FMs, 6 of which are 100,000 watters. There is relatively no need for listening to distant signals, especially since the 50 kw station carries most of the same programs as KOA in Denver.

Absolutely. All generalizations are false, including this one. Those
listeners along I-25 are transients traveling to and from cities like
Denver. Pueblo does diddly along there, but Denver booms in.

> No Denver FM has a city grade signal (70 dbu) that gets south of
> Larkspur.

70dBu is a pretty serious signal. While that might be the ideal, you
might find that even today's receivers can do well with less.

> None has a 60 dbu that gets more than 2 to 3 miles to the north of
> Monument. None even has a 54 (protected) contour that gets to Colorado
> Springs.

Monument Hill casts a great big shadow over the Springs, but you
continue south for another 50 miles and there's Denver again.

My personal experience differs. But that's okay -- next time I'm down
that way, I'll just tell myself I'm hallucinating the entire time, or
that it's amazing that there's some tropo happening *every time I'm in
that area.*

It was a Windsor station, but it always announced as Detroit / Windsor. You may want to visit some of the many historical pages on CKLW before you make any claims as to what it did when.

As for WHK and WIXY, they had their listeners. WHK targeted a different market -- country -- and WIXY wasn't as polished as CKLW but was vaguely similar in playlist-type. FM was certainly a factor at that time -- mid 70s -- but the target audience of CKLW and WIXY didn't have the money for FM receivers to get WMMS, WGCL, and WWWM. (At that time, WCLV was transmitting in quadrophonic and WWWM used Dolby FM. FM was a player, but for an entirely different level of income.)

No. Brenda Ann shared her experiences; I've described mine. Even you talk about having to discourage on-air talent from acknowledging someone from out of *your* definition of the market.

> Arbitron looks for a pattern of consistent, measurable listening within the
> market. If you add up the "outside groundwave" mentions you get nothing.

"We've adjusted the model to not show any listeners in low-density regions, and now it tells us definitively that no one is there,

anyway." Nice.

>
> And nearly every East Overshoe has local stations.

Sure. This East Overshoe has one station that broadcasts the local
church services; that one broadcasts the farm report info; the other
is run as a labor of love.

But they have no useful information. The East Overshoe *I* live in
has no local stations. None. Nada. The previous owners of my house,
non-techies by any measure, had some substantial FM antennas on the
house to get their stations. The neighbors do, too.

You can argue in a circle for hours, but you'll still be where you
started. "The market is defined as *here*, and any sales outside of
it don't count. We count 0 sales out of our defined market, so
there's no out-of-market sales."

> This is just not
> going to happen, and introducing a fluctuating variable hurts radio overall

> night. Atmospherics do this on occasion. It is not normal.

Of course not. That was my point. CKLW's target was the northern
U.S. They covered it, well and consistently.

WABC seemed to have an antenna pattern change that put their coverage
west and south for evening/night broadcasting. They were as reliable
as sunrise.

>
> And CKLW when it had ratings was in an era when AM was bought differently

IIRC, it was after Qwest bought US-west and found out that they
inherited all the record fines and customer dissatisfaction. I don't
know for sure. But the questions were irrelevent, truly. I took the
survey and laughed about it for a long time.

In other words, the radio industry has trained its regular advertisers
well, so you're not only thinking inside the box, you managed to nail
it shut from the inside. Congrats.

MK,

So you use the same Amateur Radio Antenna
for the 160m and 80m Bands as you do for the
6m and 2m Bands.
http://en.wikipedia.org/wiki/Amateur_radio

160-Meter Amateur Band = 1.815 to 1.89 MHz
80-Meter Amateur Band = 3.5 to 3.8 MHz
6-Meter Amateur Band = 50-54 MHz
2-Meter Amateur Band = 144-148 MHz

MK # 1 - " An antenna is an antenna is an antenna. "

But A Piece of Wire - Now That's Electrical ! :o)

MK #2 - "Do you think when I switch from a SWL
to a ham band, I need to switch antenna types? "

MK - As an Amateur radio Opperator - If you were using
a 20-Meter Dipole Antenna to Talk Coast-to-Coast
http://www.chem.hawaii.edu/uham/20.html
-or- a SkyWire {NVIS} Loop Antenna for your local-area "Net" Work
http://groups.google.com/group/rec.radio.shortwave/msg/c8c8553f4137bb58
http://groups.google.com/group/rec.radio.shortwave/msg/291803362ae6952f

1852. Re: 5170.43khz carrier 2pm to 3pm pst sf bay area

Newsgroup: rec.radio.shortwave
Date: 2006-03-13 08:53:38 UTC
From: miso@sushi.com
Message-ID: <1142240018.706511.271420@i39g2000cwa.googlegroups.com>
Source record: 67241

Yes, I checked sideband, and there were no sidebands. I know that
sometimes a data signal sent in sideband appears like a carrier if the
radio is in AM, so I always check the signal in the various
demodulation modes.

It was fading in and out, so I'm sure it was not generated locally.

1853. Step Aside for the Bent-Quarter-Doublet Antenna with a 4:1 Balun and Coax Cable Feed-in-Line

Newsgroup: rec.radio.shortwave
Date: 2006-03-13 09:39:18 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1142242758.148627.292570@v46g2000cwv.googlegroups.com>
Source record: 67242

For One and All - IMHO :

The Dipole or Doublet works best for the Shortwave Listeners
(SWLs) general all around all-directions and all-frequency needs :

WHEN - One of the two equal Wire Antenna Elements {Arms}
is Bent-in-Half and Down Vertically to the ground at one end only.

* The Dipole or Doublet is fed from the Center either with
Twin-Lead / Ladder-Line or a 1:1 of 4:1 Balun and Coax Cable.
- - - My choice for a Shortwave Listener (SWL) would be the
4:1 Balun and Coax Cable Feed-in-Line to the Radio / Receiver.

* The Straight-Arm of the Dipole or Doublet is Rigged like
a normal Dipole or Doublet Antenna.

* The Bent-Arm of the Dipole or Doublet is Rigged like an
Inverted "L" that is fed from the Top-Far-End.

* The Bent-Arm is Measured and and Half the Length
is Horizontal and the other Half of the Length is Vertical.
to within One Foot of the ground surface.
Note - For a Half-Wave (1/2 WL) Dipole this means that the
Rigging Height of the Doublet's Horizontal Arms is about a
1/8 WL above ground level.

* * The Horizontal Arm Sections are 1:2

* * The Vertical Up-Leg Section to the Horizontal Arm Sections are 1:3.

Conclusion - The Bent-Quarter-Doublet Antenna with a
4:1 Balun and Coax Cable Feed-in-Line can be a very
effective Shortwave Listening (SWL) Antenna :

WHERE - Three Mounting Points are available for
Rigging the Doublet Antenna.

IN WHAT EVER - Space is Available for the Doublet Antenna
{Random Wire Dipole type Antenna} to be Rigged.

doublet-or-nothing - iane ~ RHF

11 FM's??? It's a city of barely 51,000 as of 2004... what do these stations use for a market? When I last lived there (which was 1977 by the way) there were 3 AM stations, KTWO has always been a flamethrower, I can't remember for sure whether they were 50KW at the time or not, but I do know that their nighttime signal was always at least S7 or S8 anywhere in Oregon. Another was a daytimer country station on 12-something, and the third was KATI on 1400, a top 40 station. There was one FM, KAWY, sister station to KATI. I think there may have been an FM that made it into Casper out of Rawlins.. I prefered KOA to all of those (except weeknights when KTWO ran CBS Radio Mystery Theater).

Add to that, at the time, there was on TV station, KTWO, which carried programs from all three major networks. Those lucky enough to have cable got Denver channels and Ch. 5 out of Cheyenne (big deal).

Funny thing, Natrona County, the county of which Casper is the seat, has long been the most populus in the state, nearly half again that of Laramie County, where Cheyenne seats..

Still stupifies me that they could support that many FM outlets, especially when a large number of people in the area are itinerant workers at farms and oilfields.

I sort of miss the town, it has a certain cowboy charm to it..

>> So the same can be said for a 1/2 wave dipole.

>Fine then everything is relative.

If you say so... A benchmark should be a known quantity,
if it's going to be of any real use to more than one person.

> The gain of a length of wire will not vary much depending on how it's
> fed. Only the length really matters. Of course, different methods of
> feeding vary as far as system efficiency. In the case of 1/2 wave or
> smaller wires, the efficiency of the feed system is about the only
> thing that matters much among the various versions of such.

>Well that's just the way it is for electrically short wires. What you
>missing here is the wire is half the antenna and the energy it picks up
>is common mode and not just a function resonate length.

Sure, it's only half the antenna if you feed it against ground.
But I don't run those types of antennas.

> or instead be listed as dbi, which is a theoretical value. The only
> difference between dbd and dbi is about 2.1 db. You are just shifting
> your reference.

>Yes a dipole is a classic reference antenna. This is not an amateur news
group.

Again, I never said it was. A dipole is still a classic reference
antenna
even here on this group. I don't change theory when I change groups.

> > A random wire is the basic antenna here.

> Sure, it may be for some, but I'm sure not all are content to stay
> with one antenna their whole life. I'm just as much as SWL as you
> are, and my "basic" antenna is a 1/2 wave dipole. I've been SWLing

> 8th grade. Didn't get legal until 77. When did you start SWLing? If
> it's longer than 42 years, I'll give you a free cookie.

>Please consider your audience before posting or keep on Trolling you
>jerk.

I'm very damn well aware of what group I'm posting on. Troll? Jerk?
You piss and whine about my short post to RHF where I ask about
his wanting opinions, and you say that I'm offensive in that post,

which
is most certainly not the truth. But you sit on this thread and call me
a troll and a jerk, just because what I say chaps your ass in some
way. You need to take some of your own advice.
I'll give you something to really whine about, you twinkled toed
peckergrip.. You are one prime time asshole, you know that don't
you? And your buddy RHF ain't too far behind it seems.

>Well based on my reading of amateur news groups there is ham antenna
>theory and then the theory the world actually operates on.

You must not read too well then. Either that or the "other" groups
you refer to must not be too up on antenna theory. Again, there is only

one set of antenna theory. There are not ham versions, SWL versions,
etc..

>As you say LOL...

Damn right. You and RHF crack me up. You two think you own
this frigging group don't you. This group is not just "SWLing for
newbies". As far as I know, even more advanced SWLers can hang
out here. Or do you have some kind of problem with that? I
suspect you probably do, being as you think you own this group.

>Laugh all you want. I'll just keep pointing out that the news group is
>for short wave listening not ham radio.

And I'll keep pointing out that I've never made any mention of amateur
radio. Only you, or RHF. Anyone that can read, can see that is true.
Why would I talk about ham radio to a bunch of non hams? You need to
get a grip.

>That the simplest antenna is a
>Marconi type single wire antenna and if a listener wants to make an
>antenna better than that he would expect a payoff in the way of stronger
>received signals so one too weak before could now be heard, better
>signal to noise or maybe directionality for various reasons. Please
>consider your audience before posting or just keep on Trolling.

I'm well aware of what a Marconi is. And I'm well aware of why I
prefer not to use them for any purpose. Have you read any of my
posts where I hold a gun to the head of all these SWL's, and
force them to use a dipole, or any other antenna? I could
give a flying flip what you , RHF, or anyone else around here
use. But I will surely tell all what *I* prefer to use. If you don't
like it, don't let the door slap you in the ass on the way out.
I'm not going anywhere, and if youAnd RHF keep spouting your whiny
horsecrap in my direction, I'm going to be here every frigging day
of the week. Just to bug the crap out of you. I'll live for it. Trust
me.

>Your a good example of why I no longer read the amateur news groups and
>am not a ham operator. Why would I want to go out of my way to talk to
>someone like you.

Who cares. I'm sure I probably wouldn't want to talk to a tightass
dipshit
like you anyway. I've said it once. I'll say it again, you are one
prime
time asshole. I've tried to cut you slack and be fairly pleasant to
you over the last few months, if not ignore you altogether.
But I can see that is not going to work.
So...Fuck you. Put me in your kill file, you twinkle toed wanker.
Sheeeshh...What a whiny ass prick you are.

> choice for product placement as the FR250, S350, and S350DL are all
> more expensive and better-looking.

It was used to give a sound over of election results. It was probably
used because it "looks millitary".

The story is of slightly less than 49,000 people who survive the destruction
of 12 planets (called the 12 colonies) on a collection of ships. Battlestar
Galactica is like a submarine inside. It was designed to be "low tech",
because the enemy is a race of robots who take control of computerised
systems.

This is always played in contrast to the civilian ships. Except for a
few cargo ships, most of them where high end spaceliners. Except for
the upper officers, everyone on the battlestar sleeps in bunks, uses
co-ed showers and toilets, etc.

Think of 2001 action with "Run Silent, Run Deep" sets.

Geoff.

1863. Small Vertical {Omni} Active Shortwave Receiving Antenna and Free-Standing "Grounded" Metal Mast {Top-Rail} Mounting

Newsgroup: rec.radio.shortwave
Date: 2006-03-13 11:57:39 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1142251059.169479.167820@j33g2000cwa.googlegroups.com>
Source record: 67252

For One and All,

Note - Thank You David for the reminder
and the opportunity to post on this Topic. ~ RHF

First - Use a 21-Foot piece of Top-Rail with about
3-Feet in the Ground as the Free-Standing Vertical
Support for this Antenna.
- Use a Post-Hole Digger to dig a 3-Foot Deep 6"-8"
Post Hole in Ground at the Base Location of the
Top-Rail..
- Drive a Ground Rod into the Ground with-in the
Post Hole with about 12" sticking-out above ground.
- Take a Black Plastic Lawn Leaf Trash Bag and wrap
it 6-7 Times around the bottom 3-4 Feet of the Top-Rail.
- Place the Bag-Covered end of the Top-Rail in the Post
Hole and Rig-it-Vertical.
- Fill the Post Hole with Concrete and let it set for 2-3 Days.
- Carefully remove the Top-Rail from the Concrete Anchor
and remove the Plastic Bag from the Top-Rail and Hole.
Note - The Top-Rail should fit snuggly in the Hole in
the Concrete Anchor.

Second - On-the-Ground :

Mount a 102-108 Inch CB (10m) Whip Antenna
at the top of the piece of Top-Rail.
(CB-Ham type Mounting Hardware)

Mount the Out-Side Amplifier Module next-to or
just-below the Whip Antenna.

Connect the Whip to the Module.

Run your Coax Cable / Power Line from the
Module along the piece of Top-Rail.

Third - Rigging-the-Mast : {Top-Rail}

Place the Top-Rail into the Hole in the Concrete Anchor.

Connect the Ground Rod to the Mast {Top-Rail}
a few inches above ground level.

Fourth - Connect the Coax Cable / Power Lead
to the Active Antenna Control Box and Radio.

FWIW - These three Small Vertical {Omni} Active
Shortwave Receiving Antenna lend themselves to
this type of longer Vertical Antenna Modification
and Free-Standing "Grounded" Metal Mast {Top-Rail}
Mounting :

>MK - Gee - First the Stage # 1 - Technical Assault -and-
>Now the Stage # 2 - Bad Attitude and Bad Language Assault.

Thats right. I have a hard time tolerating assholes that think
they own the newsgroup, and think they should be able to
determine the content of it's posters. Telewhine started the
scrap telling me I'm a troll, and a jerk, just because he
doesn't like some of my theories. I don't take crap off anyone.
Actually, I think he's got a purty mouth. :(

>mk - wow ! - you are a real amateur operator ;-) ~ RHF
>[MK - I Am Glad We Had This Conversation :<]

You wouldn't know a real amateur if it bit you in the ass.
The real problem here, is telewhine, and maybe you also,
have some kind of problem with hams. I guess one must
have bent him over and drove him home at some point in the
past.
I consider this a personal problem, and none of my concern.
I rarely talk about ham radio on this group, and you should
know it, being you seem to live here about 24 hours a day.

For One and All,

Maybe it is really designed for people who want to hear themselves or better yet their neighbors electrical appliances working and going on-and-off and off-and-on :o)

But then again it is Made-in-Japan and may be it is designed to pick-up that Beautiful Buzz for all those Really Big Neon Signs :o)

BUILD-YOUR-OWN : Apartment / Condo Balcony Coax Cable "Snake" Antenna

* I think that if I took a 35-Foot piece of Coax Cable

* Removed Six-Foot of the Outer-Shield from one end (The Antenna End) and enposed the Inner Insulation and Center Conductor as the Wire Antenna Element.

* Then installed a PL-259 Plug on the Radio-End.

* Next place a first Snap-on-Ferrite Core about One-Foot from the PL-259 Plug

* Followed by a second Snap-on-Ferrite Core at about One-Inch from the point on the Coax Cable where the Outer-Shield was remove over the Last-Inch of the Outer-Shield.

* Rig the Wire Antenna Element on the Balcony.

* Route the Caox Cable inside to the Radio / Receiver.

* Connect the PL-259 to the Radio / Receiver inside the Apartment / Condo.

That this would be as good {IMHO} as this new Apex Radio 303WA 'passive' Receiving Antenna and I could Save about $100 USD.

Interstates are elevated, and mostly clear of obstructions by nature. The
fact is, there is not a listenable signal to any Denver station much south
of Monument, except for sporadic places where height gives a path into
distant locations. The chances of any significant listening occurring when
the signal comes and goes and is unlistenable on average radios is nil.
>

Nearly all reported listening to FMs occurs inside the 64 dbu contour.
Research by third parties as well as Arbitron itself where diaries are
compared to coverage maps confirms this is a pattern that has held true for
decades.

You may put up with DX-quality signals, but the average listener does not.
This is why AM skywave is not much listened to any more: the quality is
ratty and the reception is inconsistent.
>
>> None has a 60 dbu that gets more than 2 to 3 miles to the north of

Who the heck is going to be checking every 10 or 15 minutes to see if a
Denver stations is DXable? Only someone with an obsession, as regular
listeners just let the seek button pick a better signal with the same sort
of programming and are done with it.
>

You are DXing, and putting up with come-and-go signals. Listeners are not DXers. If the signal is not perfect, they don't listen.

> By your filtered numbers. Which I simply do not accept as an accurate
> reflection of reality. Use them all you want for your narrow view,
> but I believe your methodology is *fundamentally* flawed.

My numbers, again are not filtered. They are not even "mine." They are Arbitron numbers. Arbitron diaries instruct each participant to write down everything they listen to, day by day, for a week. They do not say, "only local staitons" or anything else. Just, "hat did you hear on the radio." If anyone listened to distant stations in any measured market, it gets picked up. As I mentioned, 2 people out of 3000 sampled in Phoenix had listened to KFI in the last 12-week survey period. Since that is not enough listening to project into the usinverse, it is not in the published printed reportes, but is in the electroinc reports that stations and ad agencies get.

Everything is measured. But if there is no behaviour of the kind you want to see, it is not the fault of Arbitron. It is the fact that people just do not listen to out of market stations any more.

In another response, I mentioned that Casper has, now, 11 stations. There is no need to put up with bad signals or to wait until after sunset to listen to the radio. Nearly everything you could want is on the air there. No need to be a DXer to get the music or talk you want.

My whole point is that there are several factors that have changed since the days when families gatered 'round the radio at night to hear The Lone Ranger on a staion sometimes hundreds of miles away. First, there are vastly more stations. Second, evenings are no longer prime time; 6 AM to 7 M 9 is. And, third, most listening is to FM which seldom gets any usable signal out of each station's home market, unless it is in the fringes of an adjacent market not far removed.

>
> It was a Windsor station, but it always announced as Detroit /
> Windsor. You may want to visit some of the many historical pages on
> CKLW before you make any claims as to what it did when.

since I am mentioned on the CKLW tribute site as a contributor, I think I know a bit about the staiton. It's glory years were from the time it became a "Drake" station in the mid-60's until the early 70's. By then, the FMs in detroit, like WDRQ in 1972, had nocked it off and it was on a decline. As

CHR FMs came on in Toledo, Cleveland, etc, it died a quick death in those
places, too.
>
> As for WHK and WIXY, they had their listeners. WHK targeted a
> different market -- country --

WHK was THE Top 40 well into the 60's,a nd then was in a battle with WIXY
until the FMs camy. WGRC (the General Cinema staitons) and WNCR killed both.
CKLW was an afterthought in the 70's in Cleveland.

> and WIXY wasn't as polished as CKLW but
> was vaguely similar in playlist-type.

the palylistes were pretty much identical, and the style was pretty much
identical, save the looser personality of WIXY.

> FM was certainly a factor at
> that time -- mid 70s -- but the target audience of CKLW and WIXY
> didn't have the money for FM receivers to get WMMS, WGCL, and WWWM.

By the early 70's, there was no price premium to get FM in most cases. By
1975, FM had more listening in Cleveland than Am, due in part to the
horrible AM signals on all but one of the local stations

> (At that time, WCLV was transmitting in quadrophonic and WWWM used
> Dolby FM. FM was a player, but for an entirely different level of
> income.)

Wrong. FM CHRs were going #1 all over the USA between 1972 and 1974. Even in
places like Birmingham, AL, FM CHRs beat the established AM VHR and often
drove it to a new format. Nearly every AM CHR was losing before 1975.

Having announcers chatter about anything the local audience cares nothing
about is bad radio. Inside jokes are another one. Announcers may feel
excited about a call from out of the area, but the listenership does not
care about any listener except themselves. Boring.
>

There is no adjustment. Arbitron must, to keep its accreditation, use accepted statistical practices. In statistics and polling, data which is not projectable onto a universe is not usable. So there has to be a minimum level of listening for a station to show up in the printed Arbitrron list. still, all subscribers (radio and agencies) get the data that shows that KFI got a share of 0.0 in Phoenix on a cume of 2,300 persons. The fact is, that is so little that no advertiser or station would ever care... when the #1 station in Phoenix has 100 or 200 times that listening reach.

You know, I trust, that advertisers only buy the very top stations in their target demographics? No aqdvertiser buys all 50 stations licensed in the Phoenix Metro... just a few generally do. So no advertiser is going to pay LA prices to reach Phoenix.

>> And nearly every East Overshoe has local stations.

> there's no out-of-market sales."

No, the markets are defined by the OMB, and are based on the old trading zone concept. Arbitron matches them, usually exactly, but somethimes in accordance with the coverage of the significant radio staitons in each market zone. This is because this is what advertisers want, and radio pays to have Arbitron deliver data to advertisers and agencies that they can use.

Radio does not drivce advertisers, advertisers drive radio. They play the song, we dance. In this case, the DX song never gets palyed.

> to your advertisers. At least, it is after *you* are done with
> them...

Adding a few insifnificant listeners outside the local metro is not worht anyone's time to consider. Add the fact that this data changes book to book and it is just considered a curiosity and regarded as extraneous by ad buyers who are under a mandate to buy media by the market.

>> I remember a 10 kw Venezuelan overriding WKYC on 1100 in Shaker Heights
>> one
>> night. Atmospherics do this on occasion. It is not normal.
>
> Of course not. That was my point. CKLW's target was the northern
> U.S. They covered it, well and consistently.

CKLW's target was Detroit. It got a fringe benefit in Toledo, Sandusky, etc. Remember, it is directional to protect what was XELO in Cd. Juarez, Mexico, so the signal mostly went up and east. Most revenue was daytime, even back then, and was mostly for detroit (there were other canadians around Thunder Bay, ON, and Montreal, PQ, on 800 so this thing hardly coverd the northern US as it was directional mostly to the north.
>
> WABC seemed to have an antenna pattern change that put their coverage
> west and south for evening/night broadcasting. They were as reliable
> as sunrise.

WABC has never been directional. It is one of the original 1 A clear channels. In the 60's, under Rick Sklar, they showed up in ratings as far off as 300 to 400 miles away from NY. Of course, many early Top 40's were widely listened to over as many as several states because not all cities and towns with radio stations had a top 40, as the fomar was perceived as being teen intensive and not appealing to many smaller market direct retail advertisers. .
>
>>
>> And CKLW when it had ratings was in an era when AM was bought differently
>
> ...and the "new, improved" method you espouse is soo much better,
> right?

Nothing will change the fact that when CKLW changed to top 40 FM was an insignificant player and there were 40% fewer AMs than there are today. Using Cleveland as an example, in 1960 the market had 6 viable signals (850, 1100, 1220, 1260, 1300 and 1420) and two marginal ones, 1490 and 1540. Of the viable onnes, three if not 4 had severe signal limitations incovering the market, and two more had smaller areas of missed coverage. Today, the market has 30 stations competing, two thirds of which are viable. There is no need for outside Am signals which only penetrate by night when radio is of limited consumer appeal.

>> Again, advertisers with an interest outside of the local market buy

No, they mostly use direct mailing lists, and ads in specialty magazines
like hifi and stereo mags, comuputer mags and such. they only use limited
radio in thier home town, as they are both a mail order house and a local
retailer depending on walk in business.

> it shut from the inside. Congrats.

Radio is less than 10% of the total advertising pie. Radio can not train
advertisers to do anything. Advertisers tell radio what they want, and radio
provides it. Advertisers don't want to reach people over 55? Radio does not
design programming for 55+. Radio serves advertisers. Hell, general Electric
has annual revenues that are, for one company, greater than the total gross
income of the entire US radio industry. Advertisers make the ground rules,
and always have.

NPR has had erosion nationally over th elast two to three years. (ratings are quarterly, so your question indicates your fundamental ignorance of how radio works), although a couple of stations are up where the local programming that complements the national NPR stuff has been very effective. NPR stations are in the top two or three in DC and SF, but not even in the top 20 in LA, for example.

She says, "great daytime coverag, that." There is no normal and regular
daytime AM skywave. Therefore, she was listeing to groundwave.

My point is, "why?" The nose on a fringe AM vs. the same programming on the local AM news talker (which has the same owner) makes the deep fringe daytime signal irrelevant as there are nearly a dozen choices in Casper,a ll local, that sound better than KOA.

I can get KDWN from Las Vegas in Glendale, CA. A bit noisy, and I can hear my neighbor's aquarium heater go on and off, among other things. I can get it, but I would not want to listen to it. Heck, I can get Kota Kinabalu on 1475 nearly every morning... but I do not listen to it... I hear it.

Today, if the seek button does not stop on a signal, people do not listen to it.

Not according to their corporate spokesmen, wih whom we have been dealing.

> Los Angeles is the biggest manufacturing center in the country and lots of upscale folks with no degrees. <

Yes, but many of their stores in LA were established prior to adoption of their college degree policy.

I agree, it's a corny policy, but Trader Joe's is run by a rather corny bunch of individuals.

Well, I could have built my 80 meter dipole out of copper pipe, but
the neighbors might have objected -- I used 18 guage stranded, which
is fine for my 100 watts, and would probably handle legal power, too.

For my 20 meter inverted L, I used #26 stranded. It's hooked to a
mightly 3.5 watt qrp rig.
>

>What is legal power for hams on HF? 1500 watts?

1500, and I believe it's continuous, but you can check the FCC site if
you wish.

Well, they're more broad-banded, for one thing.

Once again, less-than-half-wave antennas, properly tweaked, are as
loud to my ears as half-wave antennas. I know I'm right because I'm
talking about what I hear.

As far as whip antennas go, actully, a lot of hams do pretty good on
75 meters with highly tweaked 6- or 8-foot whips on their cars.

Remember that Spanish from Central America, Spain and Cuba all differ.

Best course of action is to attend a non-credit jc class or something like that. There are no shortage of Spanish classes available.

Could someone explain this to me: From what I've seen with mobile passive whips, even of the longer variety, the issue of resonance seems always to be a limiting factor in band applicability.

What makes this whip suitable for such a vast frequency range (30 kHz to 30 MHz)? Some coil or another?

How would it be any more suitable for SW than, say, the 12 foot whip that MFJ offers?

I think of Wally George's red, white and blue suits as ''corny''. I
characterize TJ's alleged siting criteria as bizarre. You'd think
that the $66k a year income would perk their little pointy ears:

(My Zip Code)
population male 15,307
population female 15,006
median age 32.91
college graduates 22%
white collar 75%
blue collar 25%
no. of households 9,564
no. of family households 7,032
average family size 3.64
median household income $66,413
average household income $69,159

You get no argument from me - but apparently, what they are looking for
is some kind of "cultural" factor that is defined by having that
degree. They feel that, without the degree, a populace is far less
likely to frequent their stores. They figure that blue collar folk
want standard fare meat-and-taters, while the collegiate crowd go for
the "unique offerings" of TJ's.

In any case, our comparably sized community of $600,000 homes wasn't
good enough for them.

> > elections (just ask Ross Perot).
>
> better still ask John Kerry

Although I have (or at least had) lots to say -- mostly negative --
about Chuck Harder's nationalism, for the purposes of this post, that
is beside the point.
The point I've made over and over again (dating back to Chuck's
accident in May 1999) is that, for lack of a better metaphor, the Chuck
Harder era -- which began in late 1991 and persisted until early 1995
-- is long gone. I'm talking about the pervasive anti-government anger
and disgruntlement that existed back then, especially on the Right. OK,
there's lots of talk about the same thing today, but (again, to employ
an old, worn aphorism) that's comparing apples and oranges.
Today, whatever "anger" or "disgruntlement" exists centers around the
Iraq and Afghanistan wars, which (in my opinion) are being completely
distorted by a Bush-hating MSM (mainstream media). There is not this
overarching, Timothy McVeigh-style anti-government hatred that we
unfortunately had to deal with in the early 1990's, the period when,
not surprisingly, Chuck Harder saw his biggest successes and largest
radio audiences.
Look at the numbers: In 1992, on average, only 15 percent of voters
surveyed thought the U.S. on "on the right track." Today, that number
is in the low 30's -- not good, but not catastrophic either.
Today, we have the so-called "Minutemen," trying to keep illegal
immigrants from sneaking across the border. Compare these folks to the
citizen militias of the early '90's, who were trying to overthrow the
U.S. government (again, not surprisingly, Chuck supported the CM's back
then). The Minutemen are trying to help the government; the militias
were trying to destroy it.
Oh, I forgot to mention crime. In the early 1990's, it was out of
control, with about 2,000 homicides per year in New York City and
almost 500 in Washington, D.C. Today, those tragic figures are down
dramatically (under 600 in the Big Apple, under 200 in D.C.).
Runaway crime was, to many angry voters, a symbol of American decline
and an uncaring, elitist, "New World Order" globalist government
unwilling to do anything about it except trot out Dane Quayl [sic] and
his goofy tirades against Murphy Brown.
That was the environment that nurtured and grew the likes of Chuck
Harder. It's gone now, but, like your appendix, Chuck Harder somehow
hangs on.

I guess Chuck just likes hearing himself on the radio, and gets a rise out of talking to influential conservatives (Cliff May, David Silverstein, Jed Babbin, Peter Peterson, Josh Block, Kenneth Timmerman, etc.). In a way, I can relate to that. Hell, I'd probably feel the same way Chuck does, were I in his position.
But -- and I've said this over and over and over again -- it's time for Chuck Harder to smell the coffee and do the right thing and retire (there I go again with those worn-out sayings). Let someone else more in tune with the times take over. It's only fair.

Source record: 67291

Hello:

Am about to start stringing some coax from an outside Receive-Only antenna's Balun up to
my study where the receiver is.

The easiest thing for me is to run it alongside an existing (looks like coax, but am not sure) wire
that Comcast has strung for my broadband service to the PC. Actually to their always on modem which is then
connected to the PC.

Was wondering about coax to coax noise transfer into the receiving antennas coax from being right alongside
this Comcast stuff.

Think there's any reason for concern ?

If so, worth the trouble to find a new route for the receiving antenna's coax ?

Thanks,
Bob

The TIS on 1610 is licensed and interfering with it isn't legal. But I don't think anything will happen without a complaint. You could first complain to whichever Honda dealer is closest. If they aren't responsive and real nice, you could then complain to the FCC and IDOT.

I can't estimate the amusement to annoyance ratio on this one.

What you dont hear is the stuff the caller said that was tape delayed. He most
likely said some swear words or threatening words that were not aired due to
tape delay. Oreilly did the right thing by letting the legal dept handle it and
not reacting back himself.

Dear Bob,

The first and easiest thing to do is to try it running alongside the Comcast cable. I suspect that you will get some noise but it's possible that you won't. If you do find that this route doesn't work well you can then look into finding another route for you wire. Make sure you're using good quality shielded coax. Hopefully it will work for you.

Best of luck,

Joe

The two cables running parallel together will cause them to couple
electromagnetically. There are a few way to minimize the coupling
between them.
1. Run them at right angles to each other.
2. Increase the space between them.

It is more likely that you will have a problem when the induced RF
current on the outer braid gets to the end of the radio receiver coax
and couples to the antenna then into the receiver input. It is less
likely that the cable TV cable noise will penetrate the radio receiver
coax.

< Snip >

What you are advocating is to tie several elements at the antenna
output point together. What can happen is that power from one element
can end up going down another element instead of the coax to the radio
input. The trick here is to cause one elements to be high impedance
when another is at resonance so the relative physical and electrical
lengths of the elements must be taken into consideration.

This has been an interesting thread. One thought touched on in it has
been the idea that the radio advertising market may have been outcome
based to some extent.

I was surveyed once by a local rock FM station that had a top 40 format.
The wanted to know what music format I listened too. Classical music was
not one of the choices. Talk radio was not one of the choices either.
They wanted to know what mix of rock music I favored of older music from
the 80s and 90s and current hits. I told them I was tired of hearing the
old hits and dont ever want to hear them again. The new music was more
interesting but not my preference. She wanted to argue with me about
what I did listened too. The question moved on to if I was to listen to
KXXX what mix would I prefer. Good example of outcome based marketing
dont you think. I didnt fit into their listening survey so they would
make me fit. I just hang up the phone went they call now.

When the antenna is at resonance it will pick up more energy from a
passing EM wave than when it is not at resonance at a receive condition.

On transmit it will not radiate as well either but worse is the fact
that the transmit energy reflects back at the transmitter and the finals
have to dissipate the extra energy.

For receive efficiency you want the antenna to be full size or larger
for the frequency of operation.

Whip antennas need a counterpoise to work well. For a car mounted whip
the ground return is the car body. For a roof mount its horizontal
radials. For a portable it is the circuitry in the box and maybe you
holding it.

I expect a CB base antenna would work better than this unit. A CB base
antenna would cost a lot less. You could do even better just hanging up
a horizontal wire.

Interesting. I have a fence on 2 sides of my property. Previously, I ran a longwire along the two sides (right angle). The end closer to my house was fed directly to my second floor receiver (no transformer or coax). This was used primarily for LW and MW, but served as a secondary antenna for HF (primary is Cliff Donley's 33 foot folded dipole in my roof).

I want to replace the flimsy longwire and the 'fence loop' looks promising. Could you (the group) comment on the use of this setup for LW, MW, and HF (each leg is about 85 feet long) with regard to the loops vertical polarization, and whether bending the loop at the right-angle would add or detract from its performance.

While you're pondering, how about a vertical 'conical loop'?

I know my PC creates a lot of hash that is unkind to a sw radio if
it's within 4 feet or so. I don't know if that hash would show up on
the broadband cable. You might get a portable sw radio and hold it
against the cable, where you plan to bring your antenna feed in. If
you don't hear anything extra, you're probably okay. (You could also
try switching your cable modem on and off to verify any noise your
radio picks up.)

There is lots of bad research in all fields. the fact that the station identified itself is a good clue... introducing the name of the client creates respondent bias that is capable of ruining the responses.

> Classical music was
> not one of the choices. Talk radio was not one of the choices either.

It sounds like they were, very badly, trying to qualify respondents for a phone call out music test. In such cases, only certain combinations of stations are of interest, and screening does occur. This sounds like they did not know how to do this right.

> She wanted to argue with me about
> what I did listened too. The question moved on to if I was to listen to
> KXXX what mix would I prefer. Good example of outcome based marketing
> dont you think. I didnt fit into their listening survey so they would
> make me fit. I just hang up the phone went they call now.

Generally, this only works if they play you mix samples, as there has to be a common ground to evaluate all responses against. Usually, a variety of "pods" representing a mix will be played, and the respondent scores them on a scale.

> While you're pondering, how about a vertical 'conical loop'?

85 foot a side would be a 340 foot loop with a 1 wavelength of 2.95
MHz. When the loop receives at 1 wavelength and more than one
wavelength the receive pattern is in and out of the loop plane so a
horizontal loop would look straight up. Most DX signals tend toward the
horizon so this does not work as well. This type of antenna seems to
work better during the dark hours for me and not as good during the
daytime.

Conical verticals also tend to look up. These are used in the HARP
project to receive signals during tests. I don't know of anyone using
this type for SW listening. It would be interesting to try it.

Thanks for responding to this I'm learning a lot about broadcast
marketing. This radio station that called was one of these 40 or so
rotating hits FM stations and they wanted people at work to listen to
them all day long in the background. That's the idea anyway.

Even if it was music I wanted to listen to that is not a long enough
list of songs for me. Rotating 40 tunes of a few minutes of each means
you go through the list something like every couple of hours so during
the workday you would hearing the whole list several times a day. Since

this list changes slowly over time it would be way to repetitive for me. I can't fathom why people would want to listen to such a short list day after day. This would be torture for me to listen to after a few days even if I liked all the tunes to begin with.

Are broadcasting stations going to longer lists of tunes now that people have appliances like IPOD's that can store many albums of music?

Oh, I don't know. Never counted them all up but I think there are 250 + on the
list. However, many are now off the air.

Even out of my 220 verified I think 25-30 are now off the air.

I've heard 236 on the list.

1951. MW propogation and weather

Newsgroup: rec.radio.shortwave
Date: 2006-03-13 23:04:08 UTC
From: shoppa@trailing-edge.com
Message-ID: <1142291047.998280.129660@u72g2000cwu.googlegroups.com>
Source record: 67340

Last night on the AM broadcast band, the stations up and down the East Coast that traditionally boom in were not so strong.

The Canadian station on 740 which is usually all there is had some obvious competition from stations in the SW... Texas/Oklahoma? Also the stations from upstate New York which normally boom in had other signals fading in and out against them.

And WGN which is not all that reliably received here in Washington DC was booming in real strong.

Is this possibly related to the strong weather that has been moving through the midwest (and is due to hit here on the E Coast tonight)? Or is it just a sign of the end of Winter MW propogation?

Tim.

That's quite a list. You must have a bunch of NASWA awards.

You have been at this a long time. Have any interest in being on the
NASWA committee?

Good question. This is not a simple issue.

An iPod has "my favorite songs" on it. A radio station tries to have
"everyone's favorite songs" on it. So, to get consensus songs, the list is
shorter because I may love what you hate!

The younger the listener, the shorter the list. I do see stations appealing
to adults trying to add variety, but nothing like 1000 song iPod
collections.

Hello:

Is it safe to use the typical GE RTV silicones against a Polyethylene (PE)
coax outer jacket ?

I know the RTV's use some type of acid (acetic ?) to cure the stuff, and I
was wondering if
anyone might have any first hand experience if there is any kind of
interaction with a coax outer jacket ?

Thanks,
Bob

[Crude translation]

LW/MW/SW wide range antenna AN-12
15,750 Yen in desired retail price
(15,000 Yen in tax removal price)

- The FET Rf.??? adoption active antenna which is superior in disturbance
quality
- Covering 3 zones of the short wave, medium frequency and long wave
- You install even in the veranda and the like of the apartment, possible
small size and the lightweight separate design. Splashproof construction
- Effective antenna coupler attachment to also the radio and the radio
cassette which do not have the antenna terminal

Power source: DC9V (optional single 3 type dry cell battery ?6/external
power source jack rating DC9V)
Frequency range: 0.15-30MHz (LW/MW/SW), 1.6-30MHz (SW)
Output impedance: 50-75 Ohm
Coaxial cable: 12m

< Antenna controller section >
Size: Width 80? height 31? depth 140mm
Mass: 340g (the dry cell battery it includes)

< Antenna module and antenna holder section >
Size: Width 89? height 660? depth 135mm (when the antenna is folded)
Mass: Approximately 1kg (the coaxial cable it includes)

Accessory: Connecting cord (mini- plug <- -> coupler)
Antenna coupler ANC-2
Connecting cord RK-69A (mini- plug <- -> mini- plug)

There is/was a strong cold front running from the SW (Kansas?) up towards the NE (Michigan?) so I would guess that the cold front caused some type of ducting? The temperature differences on either side of this particular frontal boundary is/are quite large.

Although ducting of this type, as I understand, is a phenomenon which more commonly occurs on UHF/VHF frequencies.
Perhaps someone with more knowledge/experience will chime in with their comments in regards to MW frequencies and approaching cold fronts.

Good question-- my state (Minnesota) was on the northern edge of that storm path, and the storm has passed well to our east now. I'll do some checking around on the MW broadcast band after it gets dark here (around 6:50 local time) and report back if I can't hear the usual stalwarts from the Midwest and South, or if I hear stations that usually don't come in to my area.

1964. Transfer Impedance(LONG)

Newsgroup: rec.radio.shortwave
Date: 2006-03-14 00:51:51 UTC
From: r2000swler@hotmail.com
Message-ID: <1142297511.347656.106490@e56g2000cwe.googlegroups.com>
Source record: 67404

Telemon I was going to Email this info but your addy
is bogus. I wanted to inform you of my test results
and to give you the few additional refferences I located.

A few comments are at the end.

To everyone else:
I won't be responding as I have grave concerns over the
new cyber stalking laws and really have less then no desire
to get into arguements with how relevent this is to SWL.
Take from it whatever you can use and ignore the rest.
The r2000swl and r2000swler at hotmail and at yahoo
accounts are dead.

I will be greatly shocked if I ever post again.
Too much risk and way too little reward.

In an ideal universe signals outside of a coax would not
effect those inside the coax. Sadly coax is not perfect,
and outside signals can and do intrude to the inside.
The name for this effect is "transfer impedance".
I will abreviate it to "TI" to save space. TI is real and
in some situations can cause all sorts of problems.
I posted on this topic back in Dec 05 and have been
trying to find more info and gain a better understanding.
TI is a measure of "shield effectiveness"
I will start with a quote from my Dec 05 post:
"From Fluke:
<http://www.flukenetworks.com/us/

"Transfer Impedance - For a specified cable length, transfer
impedance relates to a current on one surface of a shield to
the voltage drop generated by this current on the opposite surface
of the shield. Transfer impedance is used to determine shield
effectiveness against both ingress and egress of interfering
signals. Shields with lower transfer impedance are more effective
than shields with higher transfer impedance."

Blue Jean Cables has a good simple article with chart.
<http://www.bluejeanscable.com/articles/shielding.htm>

Beldon has more info at:
<http://www.belden-wire.com/Catalog/TechInfo/TechTransfer.htm>"

Another Belden source:
www.magma.ca/~emccons/docs/beldenTiAndSe.pdf

Some patent discriptions for improved coax:
<http://www.freepatentsonline.com/4477693.html>
<http://www.freepatentsonline.com/4187396.html>
<http://www.freepatentsonline.com/4414689.html>

One way it it is tested:
<www.nema.org/stds/wc61.cfm>

A patent that shows one way to measure TI:
<http://www.delphion.com/cgi-bin/viewpat.cmd/US06230105__?MODE=fstv&OUT_FORMAT=pdf>

(My test setup is pathetic in comparision)

>From <http://www.ct-magazine.com/archives/ct/0599/ct0599l.htm>
"Transfer impedance

Drop cables are shielded cables with combination foil/braid
shields designed to operate in two electromagnetic environments
-one is the desired RF inside the cable, and the other is the
ambient over-the-air environment. Transfer impedance, Zt, is a
means of characterizing how well the shielding works, or how
electromagnetic energy transfers through the shield.

Transfer impedance relates the current flowing on the outside
shield surface (such as the common mode interference signal)
to the internal voltage it develops on the other side of the shield.
Figure 1 shows how the center conductor is susceptible to the
voltage on the inside of the shield produced by common-mode
current on the shield's outer surface. This voltage is the result
of a diffusion current through the shield."

A good overview of the subject:
<www.scte.org/documents/pdf/ANSISCTE782003IPSTP011.pdf>

A PDF with real math that discribes TI.
<www.its.bldrdoc.gov/pub/ntia-rpt/01-382/appendix_b.pdf>

My own tests consisted of a RF "white" noise source, buffered
into a 24:1 step down transfomrer that I coupled to the cable under
test in a test jig that was 12' long and with 10' of coax(or , triax,
balanced pair, heliax etc) held in place with a 10' injection loop

that was spaced 1/2" from the test cable over the 10' test length.

My set up is very crude but even with my meager level of
instrumentation
I have found that common coax will allow significant engrees.
The most important thing isn't to try to find a perfect coax, but to
play
attention to the way we route coax. Running receive coax feedlines
in parallel with "noisy" cables or wires is a real bad idea. Keep
receive coax at least 5 feet from CATV, power, or telephone
lines. Cross noise cables at right angles. For significant noise
injection to occur with "normal" noise signal levels requires
the cables to be routed "close" and for more then a "few" inches.
"Normal", "Close" and "few" are relative.

"Close" as in a foot an means a length of inches can cause problems.

Think inverse square law.

TI is mainly going to be an issue with those who have "long",
say over 50M(150') coax runs, or who have noisy cable drops
fairly close to your coax. In most instances TI is only an issue
after you have solved all the other noise problems. Noise is
MUCH more likely to be directly radiated to your antenna or to
"creep" up the outside of your coax shield, get into the the antenna
and then be a problem. The same steps used to keep signals from
creeping up the shield and reaching the antenna will also reduce TI.

The most important step in stopping TI is to prevent or reduce
common mode currents on the coax outer shield. It is usefull
to understand the shield is really 2 conductors. The ouside and
the inside are seperate conductors. Common mode currents on
the outside can be coupled to the inside and if and/or when that
happens noise is added to the desired signal.

The use of feritte "beads" on coax(or the techniques shown
by Bryant at <http://www.dxing.info/equipment/coax_leadin_bryant.pdf>)
can greatly reduce the risk of common mode noise coupling
through the shield and adding noise, or creeping up the coax..

I found that in addition to beads, different feedlines can offer
much greater isolation. Mini heliax, hard line(as used by CATV),
Triax and twinax all have much lower levels of TI then coax.

While double or quad braid coaxes tend to be better, single braid
with a good foil can be much better for the 1~30MHz arena.

I could not inject any noise into heliax or hardline.

I had some TI allowing RFI from my 20" VGA monitor to get
into my system. The feeline ran "real close" to the monitor,
a very strong RFI source. By rearanging my shack so the monitor
and PC are well away from the feedline and patch bay I was able

to reduce the RFI to a level I can only detect with lengthy audio
FFT runs to see what I can no longer hear.

I hope this helps others to avoid some problems I have fought
for the over 25 years. While I really knew better, I had operated
like coax was a perfect faraday shield. That illusion stopped
me from resolving some minor RFI issues that proved impossible
to fix until I understood how the RFI was getting into my system.
RF can get through the shield to cause problems. Under "most"
conditions and at most locations I suspect it is a minor, at worst,
problem. The noisefloor on HF is so high that the minimal noise
added by TI, at most locations, will be undectable. It is something
to keep in mind, and a good reson to pick the route of receive coax
with some care and attention to TI, but to not switch to hardline
or heliax to solve "problems" that aren't there. In my opinion feritte
"beads" have great utility for many, maybe most SWL antenna
feedlines. The fact that they will help to reduce TI is nice, but not
thier
most usefull aspect. I think that noise conducted up the outside of the

shield getting into to the antenna is the bigger and more common
source of RFI. And ferrite can greatly reduce that noise level.

I was moved to post this after reading the post about "Coax to
coax noise transfer" and accepted that I had something that might
help someone. Hint: Try to find another route for you coax. Broadband
has lots of noise in HF and this could be a big problem. Do a test
before comitting to this route. Place your coax parallel to the
Comcast broadband line and terminate the coax with 50 (or 75)
ohms and see if you have any noise. I suspect you won't. I would
be very concerned about the comcast cable putting noise on your
shield that gets directly into the antenna. The use of feritte and a
~9:1UNUN to couple/"match" the coax from the antenna can help
isolate the coax, and any noise it might carry, from the antenna.

>From my experiences it is much better to avoid noise then to fight to
reduce it.

I warned you all that this was long!

Heck, I don't know. It just seemed to me that since you progressed to the point of practically QSL'ing the whole world over a decade or two you might be involved in that group. I was just wondering about it.

In any event, you are certainly very accomplished in verifying what you heard. Shows you have the interest, accuracy, and the patience to follow through on a long-term goal. Congratulations on all those awards!

I wish there were more people with your interest posting in the news group. John Figliozzi used to post here and maybe some other people I haven't recognized may have but not recently. Recently a lot of crap has been posted to the news group. Usually this happens when schools out but these days it's all the time. This is not a problem for me but it is my contention that the vast amount crap posted dissuades reasonable people from posting relevant news because they dont want to deal with the unreasonable people flaming them.

I do not normally see average people walking up and starting conversations with the homeless so why should I expect normal people to post in this news group with the large volume of blatantly nut case posts?

If it's up to Sony's old standard of quality for such things, I suppose $150 isn't too bad a price.

My only involvement with NASWA is submitting a logging now and then, and contributing to the QSL Column when something comes in. I've been a member of NASWA since 1982 and I owe all my success to the members of NASWA and to Glenn Hauser and those who contribute to his various venues. I stand on the shoulders of giants.

Nothing obvious in the solar data to explain it.

Maybe the whether makes changes in ground conductivity that results in
the reception change.

Do weather changes affect the ionosphere in the lower layers that are
responsible for night time propagation?

For temporary use black electrical tape. For permanent used the self
sticking sealing tape from Radio Shack and other outlets.

I rather doubt it as the D layer (lowest of the ionosphere) begins about 30
miles up.

I've wondered the same thing. If we're technically at "solar minimum" in terms of solar activity, and yet our reports show something of a change in reception/propagation, I have to wonder how much geophysical events effect MW propagation.

As an aside, Southern Minnesota (where I live) just got slammed with a late winter storm, so I'm very curious as to how (or if) the storm might've affected what I will hear tonight.

I'm going to turn on the radio right now, and "see" what I can hear... if there is a departure from my usual MW reception at this time of year, I'll report back.

The regular Silicone RTV that contains acetic acid will disolve your copper or tinned braid or even center conductor in a month but will probably not harm the jacket

They make an acid free version of the silicone RTV thats good for direct waterproofing of copper and connectors. Coat your connectors with this after assembly then tape it and it lasts for years!

http://www.dxengineering.com/Parts.asp?ID=88&PLID=119&SecID=90&DeptID=23&PartNo=DXE-RTV598335

It can be found in some automotive parts stores as well...sure beats black tape and pretty much anything from Radio shack

Its also referenced in a lot of Motorolla and Harris equipment white pages....It's really great stuff!

I got my HD radio this evening. A few thoughts:

- I can't tell the difference between HD and regular FM. They both sound good but I can't tell one from the other.

- There are four HD stations in Nashville:

WLAC-AM 1510:
WPLN-FM 90.3:
WVNS-FM 102.5:
WNRQ 105.9:

- Couldn't test AM, as UPS didn't deliver the radio until 6:15. "FCC sunset" for Nashville in March is 6:00 so WLAC-HD was off the air.

- WVNS' analog audio sounds *better* than the HD -- the HD was "hissing its F's" which the analog doesn't do. No other station has this problem, so I suspect it's a processing issue at the station. WVNS has a translator on 102.1 which is *not* relaying the HD. (not that I expected it would)

- At my location (18 miles from the nearest HD station and about 27 miles from two of the three) the provided 18" wire antenna is not adequate for any HD reception. I hooked the set to my TV antenna. I suspect the built-in AM antenna wouldn't provide any reception either but the set comes with an external loop which probably will. I'll find out tomorrow!

- WNRQ-HD drops out for about 5 seconds about every 30-60 seconds. Neither WPLN nor WVNS does this. WVNS is a lot closer, but WPLN is on the same tower as WNRQ - and runs about 20% *less* power. Tested only on HD2 though I'd be surprised if this problem doesn't affect both channels.

- At least in theory, the HD exciter is supposed to contain a delay line that delays the analog audio to match the delay through the digital coding process. It appears that no station around here has got it completely right. (but they're all pretty close) It is possible this is due to varying delays in *receivers* though; the Receptor HD appears to delay the audio of *analog* stations. (might it have DSP for analog signals??)

- It takes roughly 5 seconds for the radio to lock in to a HD signal. If you've tuned to a HD simulcast of an analog signal, you'll hear the analog audio during the lockin period.

Maybe for potting a circuit board, not for keeping water out of a
connection. Use putty and tape.

This. Is. Not. DX.

50 miles is not DX.

100 miles is not DX.

Get out of your box and breathe some fresh air, fergawdsakes. You
have an overly simplified model of the world and it doesn't fit
reality. From what you say in this thread I would suggest you do
substantial harm to those stations unlucky enough to hire you.

But then, consultants are known for doing that in my field, too.

> You are DXing, and putting up with come-and-go signals. Listeners are not
> DXers. If the signal is not perfect, they don't listen.

These are steady, strong, clean signals.

If you were really concerned about clean signals, you'd be screaming
at receiver manufacturers to clean up capture ratios so that the
multipath doesn't garble them to hell and gone.

Oh, you work with running AM into the ground... never mind...

I'm talking about the 70s. WHK was country in the senventies. I
can't remember a time when it wasn't -- not that there wasn't such a
time, but it was before my time.

> There is no adjustment. Arbitron must, to keep its accreditation, use
> accepted statistical practices.

Accepted and accredited by whom? If you are measuring listener
density by zip code, of *course* you aren't going to see an impact
outside of the local area.

But you cover an enormous amount of territory broadly. All those ones
and twos add up. ...and you throw them out by setting the initial
conditions so poorly.

You want to know the listener density by zip code, and so you get
numbers that are utterly misleading about the overall listener
community.

> In statistics and polling, data which is not
> projectable onto a universe is not usable. So there has to be a minimum
> level of listening for a station to show up in the printed Arbitrron list.
> still, all subscribers (radio and agencies) get the data that shows that KFI
> got a share of 0.0 in Phoenix on a cume of 2,300 persons.

Who cares? You aren't selling to Phoenix. You're selling to your
listening community. LA first and foremost, everyone second. If you
can sell to someone who can use LA companies for something -- by mail
order, by phone order, by web page, by whatever -- you still *sell*.

> The fact is, that
> is so little that no advertiser or station would ever care... when the #1
> station in Phoenix has 100 or 200 times that listening reach.

But you. Shouldn't. Target. Phoenix. I don't give a crap what
Phoenix thinks. I *do* give a crap about what my listening

demographic thinks, be they in Phoenix or at some desert intersection.
If they buy what you advertise, then you are making money.

>
> You know, I trust, that advertisers only buy the very top stations in their
> target demographics?

But you are measuring geographics, not demographics. By that
standard, the dense high-rises are better targets than suburbia.

>
> You already stated you are inside the Denver metro. You have dozens and
> dozens of local stations. Including KFI.

No, I'm not, and I didn't state that. I'm outside of Denver Metro.
I'm in Ft. Collins -- Greeley by your numbers. Yet anything beyond
grocery shopping I do in Denver and Boulder because the selection and
quality is better. I think I've stopped in Greeley maybe twice. I
made my first purchase of substance in Ft. Collins two weeks ago.

But... whatever. I'm sitting herre arguing with a calculator, for
gawdssake. You just keep pretending the world fits your model -- you
can't even get it out of your head long enough to *think* for a
second.

You will be the doom of over the air broadcasting. Check back in 10
years; we'll see how the health of the industry has changed in the
last decade.

Thanks for your research and thoughts on this subject.

Generically transfer impedance refers a EM wave in this case traveling from one medium, air outside the cable to the inside of the coax where the dielectric constant of the inner insulator is the other medium but specifically since the topic is coax cable it also refers to the outer shield effectiveness.

No shielding is perfect and has an attenuation value associated with it. Normally the attenuation value is large enough compared to the signal in the coax that it is practically considered infinite but apparently not with strong external interference sources around and very small internal signals from the antenna in micro-volts. Here is does not take much leakage to mess with a few micro-volts.

Look like the first problem NEMA had to solve was coming up with a repeatable standard. The problem with the appears to have been controlling the mode of propagation of the external EM wave energy as this kept changing on them over frequency. The net result was unrepeatable results. The standard became another pipe, which with the coax cable kept inside and out side EM energy in TEM mode. Once this was adopted the results became repeatable.

Here is an example of a fixture:
<http://www.dcmindustries.com/products/TI-3000.htm>

Now before anyone get to excited about this development this is a specific standardized method of comparing cables and uses a specific mode of energy to accomplish this comparative measurement. This is not absolute as the cable can be placed in a different environment and will not have the same effective shielding.

Yup, this is a good link on the subject, I looked at this months ago. I don't remember if I found it myself or maybe you pointed it iut in the past.

> Beldon has more info at:
> <http://www.belden-wire.com/Catalog/TechInfo/TechTransfer.htm>

Take a look at the sample report at the bottom of the DCM page
<http://www.dcmindustries.com/products/TI3000brochure.pdf>

No huge surprise here at the plot (red trace) showing the shielding becoming less effective the lower you go in frequency. Any coax you use will not shield as well at lower frequencies. They don't say what kind

of cable is used in this example but around 1 MHz its about 8 ohms so if you have the strong AM station around as you complained about I see how the coax would not be as effective against it as another source at a higher frequency. The shield is only so thick and the skin depth increases with lower frequency.

In any event on the Belden link the plots of those coax cables ends at 5 MHz but you can see the value of the transfer impedance going up into the single digit ohm range so it looks comparable to the DCM example.

The problem with your crude test setup is keeping the EM energy outside the test coax (your noise source) is that the mode of coupling will change over frequency and change your results. Not only that but changes in the room around it will change your results. This is the first problem the standards committee had to solve.

Yes, your advice to limit the coupling to a nearby CATV cable to the radio receiving coax is all related to mutual inductive coupling.

I learned two things from you bringing up this subject on the news group. At AMBCB frequencies coax shielding is an order of magnitude worse than I ever expected. Number two is a reason ferrites along a long run of coax can help against intrusion of a AMBCB signal. Previously I thought that ferrites on the cable ends would be effective but in the middle of a run not helpful.

But note that as soon as you are above a few MHz the shield on most decent coax looks like a short and not much will get through it with an attenuation factor in the 90 to 110 dB range. The surprise for me was the drop in effectiveness in the AMBCB range. I can now see that extra shielding could be warranted if you have a AMBCB station interfering with your reception.

Sounds like a long lock time. Maybe it is a 5 second buffer time?

I've heard them before, but I've never tried QSL-ing
them. Are they picky about reception reports?

I just re-read the Belden page and want to point out these concluding
statements " To determine how these two regions interact with one
another, you need to know how an electromagnetic signal in one region -
with its associated voltages and current - couples to the other. The
transfer impedance gives this relationship."

The whole exercise on this page refers to a specific coupling mode where
the transfer impedance does put a value on that particular relationship
and it is valid for that mode but that coupling mode may or may not

exist in a real world situation so they follow up with "Currently, no ambient models are sophisticated enough to be used for broadband system applications. However, simplified models can be used to help analyze, if not quantify, interference problems." Yeah it does that.

It's possible that the presence of strong ionization in the atmosphere
caused by violent winds could steer or even absorb or wipe out signals.
Also, the earth's magnetic field is becoming weaker and erratic. The field
is going to affect how signals propogate, and if the field changes because
of the solar wind, that will also affect it.

All life all holiness come from you O Lord

From my quick-read of the article it seems he was referring to Drake
being responsible for the synch ..... and yes, Phil could be losing
objectivity, but if so let's hope it's temporary.

there are lots of pompous windbags on radio

again what is you point?

that Bill does n't have a lawyer. I have 3 lawyers I don't give em much bussness, but i have em around and a estbalished relationship with em

one for federal security DHS sorts of stuff since i sometimes work under contract with em, one for the trustee related issues and one that handle various local matters for me

Of Bill Oriely has a lawyer or a legal dept. hed be fool in today media world not to have at least one

The lower ionosphere goes as low as 50 km to the top of the
stratosphere where it's possible the jet stream could affect it. Our
weather in the troposphere can't though.

My compass is still working so the earths magnetic field is still OK.

Greetings RHF& All!
I appreciate the posts and ideas here. I have a 102" whip out in my building that I have been trying to figure out what to do with it. I can't afford the MFJ-1024 or anything like it. I have the Radio Shack amplified indoor active antenna. Would it be worth my while to place the 102" whip on top of the rail as you suggest and use the ground and run my coax into the Radio Shack indoor amplified antenna? Would this perform any better than say a long wire antenna or a loop connected to my active antenna indoors?
I can see that the active antennas you linked to were of much better quality and features than the RS antenna. Tell me what you think.
Thanks ahead of time! Jon in South Carolina.

I have a "special" version of the CCrane quickcharger for sale. it has
battery holders for D cells only since the multi size holders melted. works
fine for D cells only.
look here for more info:
http://www.ccrane.com/more-categories/batteries-chargers/quickcharger-battery-charger.aspx

my price is $12 plus shipping per your desired method, paypal accepted

my email is maghakian@comcast.net

> to expect that out of this thread.

Interstates are elevated, and that is why the FCC will not allow field
strength to be measured there. In fact, reception on perfectly tuned FM
antennas in cars on interstates is totally atypical. Ask any broadcast
engineer.

For many FMs, it is. For a Class IV AM it is.
>
> 100 miles is not DX.

For an FM,, it is. For most AMs it is.

Yeah, I make them tops in ratings and billing.
>
> But then, consultants are known for doing that in my field, too.

Last station I consulted went #1 in less than a month in a market of 17 million, where there are over 100 other radio staitons. It is #1 today, after 6 years. Another, in US market 13, was #1 for the entire 20 years I advised it, an Arbitron record for a Top 50 market FM.

>> You are DXing, and putting up with come-and-go signals. Listeners are not
>> DXers. If the signal is not perfect, they don't listen.
>
> These are steady, strong, clean signals.

I have run Langley Rice maps on the main Denver FMs, like KBCO, and there is no reliable signal capable of being heard on all kinds of radios south of Monument. Period. there may be small places where reflections occur, but that is not listenable for the average person. For this reason, the Denver staitons do not show up in the ratings at that distance, and the FCC can duplicate the main channel or the adjacents in such areas.
>
> If you were really concerned about clean signals, you'd be screaming

If this was possible, it would be done. HD solves this, anyway.
>
> Oh, you work with running AM into the ground... never mind...

Yeah, right. the AM I did in that same market 13 went form a 1.8 share to #2 in the market in a little under 2 years.
>>

> can't remember a time when it wasn't -- not that there wasn't such a
> time, but it was before my time.

WHK, after being sold by the Vails (Plain Dealer) to John Kluge, ws one of the more famous Top 40's in the USA. "Color Channel 14" was #1 in Cleveland until the mid-60's when WIXY captured the crown. WHK did not go country until FM had killed AM for Top 40... it was driven out by FMs.
>
>
>> There is no adjustment. Arbitron must, to keep its accreditation, use

>
> Accepted and accredited by whom?

Media Ratings Council, set up as an aftermath of a congressional investigation in the 60's into media ratings. It consists of noted statisticians and representatives of national advertisers and agencies with credentials in media research. The audit, done by a team, takes over a month every year.

>If you are measuring listener
> density by zip code, of *course* you aren't going to see an impact
> outside of the local area.

Each person counts once, whereever they live. This is a proportional sample
at the population and discreet demographic level.
>
> But you cover an enormous amount of territory broadly. All those ones
> and twos add up. ...and you throw them out by setting the initial
> conditions so poorly.

In the entire Southwest, the skywave listeners of KFI do not reach 10% of
the local, LA and Orange County listening at night, and are less than 2% of
total listening. Since a poll like Arbitron has greater margin of error than
2%, that data is meaningless and no advertiser cares.

Please try to get it: advertisers dictate. They have zero interest in out of
market Am night signals as they do not advertise at night and do not buy
markets from afar anyway.
>
> You want to know the listener density by zip code, and so you get
> numbers that are utterly misleading about the overall listener
> community.

No, we look at listeners by MSA. Metro LA. Metro Las Vegas, Metro Phoenix,
etc.

>> In statistics and polling, data which is not
>> projectable onto a universe is not usable. So there has to be a minimum
>> level of listening for a station to show up in the printed Arbitrron

> If they buy what you advertise, then you are making money.

No, we make money from selling ads to advertisers. Advertisers do not advertise for out of LA on LA staitons, or out of Phoenix on Phoenix stations. They buy each market locally, andonly the high rated stations.
>
>>
>> You know, I trust, that advertisers only buy the very top stations in
>> their
>> target demographics?
>
> But you are measuring geographics, not demographics. By that
> standard, the dense high-rises are better targets than suburbia.

No, markets are measured by a proportional sample inside the counties that make up the market. An effort is made to sample within the market in proportion to population by zone, too, in many markets.
>
>>
>> You already stated you are inside the Denver metro. You have dozens and
>> dozens of local stations. Including KFI.
>
> No, I'm not, and I didn't state that. I'm outside of Denver Metro.

> grocery shopping I do in Denver and Boulder because the selection and
> quality is better. I think I've stopped in Greeley maybe twice. I
> made my first purchase of substance in Ft. Collins two weeks ago.

You are so unique no advertiser will care about you as you do not behave in a predictable way. Advertising on mass media is bought against masses of listeners or viewers or readers. All advertisers know that reach is never 100% and they don't care as buys become inefficient when a reach of over about 70% to 75% is attempted.
>
> But... whatever. I'm sitting herre arguing with a calculator, for
> gawdssake. You just keep pretending the world fits your model -- you
> can't even get it out of your head long enough to *think* for a

I KNOW how advertisers buy, and know how to keep buyers happy, which is by providing large, local audiences all over the USA.
>
> You will be the doom of over the air broadcasting. Check back in 10
> years; we'll see how the health of the industry has changed in the
> last decade.

Well, I doubt it. In fact, last year I was given an award for putting the first FM in northern South America on the air when no stations were on the band for 1000 miles in any direction. The award calls me a "pioneer" and "visionary." What have you done except snipe?

2004. Re: Small Vertical {Omni} Active Shortwave Receiving Antenna and Free-Standing "Grounded" Metal Mast {Top-Rail} Mounting

MK - So 'you' now Claim that 'you' Get Off . . .
Having Someone Hump 'your' Legs / / / / /

Sorry the Topic Here is "Shortwave Radio" and
the "Alt.Sex.Get_Off.Leg_Humping" Group has
a completely different URL and Charter.

My Subject was : Small Vertical {Omni} Active Shortwave
Receiving Antenna and Free-Standing "Grounded" Metal
Mast {Top-Rail} Mounting - - - May not thrill you but it may
provide 'the answer' to a Shortwave Listener (SWL) who
only has a small lot or neighborhood restrictions that limit
his Shortwave Listening (SWL) Antenna Opinions. The SWL
is considering a small Vertical Active Antenna as their
primary Shortwave Listening Antenna.
- - - The SWL's Question - How Do I Mount It ?
What was posted was one option on How-To-Mount a
small Vertical Active Antenna for Shortwave Listening.

MK - Check-Out - REC.RADIO.AMATEUR.ANTENNA
If you are really interested in Amateur Radio {Ham} Antennas
then the "Rec.Radio.Amateur.Antenna" NewsGroup may be
a better Forum to express your views and their Focus is
Amateur Radio Antennas and believe me they do get very
Knowledgeable and Technical in their posting.

MK,

Why Don't 'you' Try Answering the Questions Asked ?
- - - vice - - -
Going-Off and advoiding the facts and issues at hand ?

MK - So 'you' are the type of Amateur Operator
who uses one Antenna on All-Bands ?

MK - Your 20-Meter Band 4-Element Yagi might be
Great on the Amateur 20 Meter Band and be 'ok' on
the 22 and 19 Meter Shortwave Bands - But honestly
would 'you' use it on the 60-49-41-31 Meter Shortwave
Bands ? ? ?

For the Shortwave Listener an Inverted "L" Antenna that
was 25 Feet High by 50 Feet Long would be a better
General All-Band SWL Listening Antenna then your Yagi.
Vertical-Up-Leg for 31-Meters = 1/4 WL @ 24.5 Feet
Horizontal-Out-Arm for 60-Meters = 1/4 WL @ 47.7 Feet
Total Length of the Wire Antenna Element 72.2 Feet
= = = One Antenna : Built-It & Rig-It = Enjoy-It :o)
[An 'average' size SWL Antenna that can "Fit" InTo
the Urban Backyard.]

For the Shortwave Listener wanting something a little
Bigger then an Inverted "L" Antenna that was 32 Feet
High by 71 Feet Long would be a little better General
All-Band SWL Listening Antenna - If they had the Space
and the Ability-to-Rig the Antenna Wire that High .
Vertical-Up-Leg for 41-Meters = 1/4 WL @ 31.8 Feet
Horizontal-Out-Arm for 90-Meters = 1/4 WL @ 70.9 Feet
Total Length of the Wire Antenna Element 102.7 Feet
= = = One Antenna : Built-It & Rig-It = Enjoy-It :o)
[A 'larger' size SWL Antenna that can "Fit" InTo
the Urban Backyard.]

Alas, many Shortwave Listeners can only have an
Inverted "L" Antenna that is a little smaller and 15
Feet High by 30 Feet Long would be the best that
they could do for a General All-Band SWL Listening
Antenna - Since that have very limited space and
can only Rig oh-so-high.
Vertical-Up-Leg for 19-Meters = 1/4 WL @ 15.1 Feet
Horizontal-Out-Arm for 41-Meters = 1/4 WL @ 31.8 Feet

Total Length of the Wire Antenna Element 46.9 Feet
= = = One Antenna : Built-It & Rig-It = Enjoy-It :o)
[A 'small' size SWL Antenna that can "Fit" InTo
the smaller Urban Backyard.]
Note - The Par EF-SWL Antenna lends itself to this
'small' Inverted "L" Antenna Rigging and it is only 45
Feet Long and includes the Wire Antenna Element
and Matching Transformer - Just add Ground Rod
plus Coax Cable and you are ready to Rig-It and
Enjoy Listing to your Radios.
http://www.universal-radio.com/catalog/sw_ant/2205.html

MK - For the Shortwave Listener (SWL) the 'classic'
Shortwave Antenna was the so-called Longwire Antenna.

CLASSIC - SHORTWAVE LONGWIRE ANTENNA {KIT}
A simple 50-100 Foot long piece of Bare Copper Wire
plus a 30-50 Foot long piece of Insualted Copper Wire
add a 5-15 Foot long piece of Solid Copper Ground Wire
and a Cold Water Pipe Ground Strap. Add-in a few
Insulators. With the 'complete' One Page of Instructions
including a Diagram and Parts List.

Now That Is A "CLASSIC" When It Comes To Shortwave
Listening (SWL) Antennas and Shortwave Radios for the
last 75-100 Years.

Hey MK - It Is Such A "Classic" that RadioShack
still offers one for sale today :

* Outdoor Antenna Kit for Shortwave Radios
RadioShack Catalog # 278-758

> Sounds like a long lock time. Maybe it is a 5 second buffer time?

Probably.

BTW, it's now 6:45am and WLAC-HD is on the air. It's also nearly
impossible to receive.

That is in part the radio's fault. The power supply radiates a strong
hash on 1510KHz. (ironically, it sounds a lot like HD sidebands!)

When the hash is nulled, the set does receive WLAC-HD. Unlike FM, AM HD
does sound different from analog. Not better, just different. Mostly,
it's a frequency-response thing and I think that's probably the way WLAC
and/or Boston Acoustics have things set up - I don't think it's inherent
in the HD system.

I am however noticing compression artifacts. I'm generally fairly
immune to artifacts. (I have no problems with MP3 files; on digital TV,
people can point out artifacts and I still can't see them!) So I
suspect those who *are* sensitive to these are going to find HD AM
rather difficult to listen to.

The set is fairly sensitive in detecting the fact that an AM station
has HD. The HD light was blinking on Chicago stations WSCR, WGN,
WBBM, and WRLL, and on Louisville's WHAS. It never came close to
decoding any of these though. A bit before decoding WLAC it picked up
and displayed the call letters.

Bottom line is that HD Radio is not going to catch on in the outer
suburbs, because it's nearly impossible to receive on the antennas most
listeners are using, and most listeners are not going to percieve any
improvement over analog.

My understanding is that Drake designed the synch detector in the Sat
800, and I'm told that the E1 uses the same synch detector. If this is
correct, then Drake is the designer of the E1's synch detector.

However, something is indeed weird here. Do a search on the word "Eton"
in the text of this review. You'll find absolutely zero occurrences of
it. On the other hand, search on "Drake" and you'll find four
occurrences of it. Someone could read this review and never know that
Eton had the least involvement with the E1. They'd think it was Drake
from beginning to end.

Terry and Telamon,
Your posts and links are very informative and I appreciate you guys posting this type of information.

Telamon your previous comments on impedance and reactance is also very much appreciated. I'm still confused on why impedance is not frequency dependent, but I'm working on it.

Terry I don't quite understand your fear to posting, but I hope you find a way around it and continue to contribute to this group. I'm sure they appreciate it as I do.

> MW propagation.

Well, there are obvious winter/summer and day/night effects. In fact
the warm front preceding the storm system produced temperatures in the
mid-80's here, in what is still technically winter! Does that mean that
my expectations of "summer" vs "winter" MW propogation should change
when the temperature goes up and down?

And I've wondered if solar activity/storms etc. affects weather and
storm patterns on earth. I have some anecdotal experience (gees, that
was a big solar event, and hey we had bad thunderstorms last night
too!) but I don't believe just that. Somebody somewhere must've done a
more global study.

Tim.

Impedance and frequency are related.

Impedance depends on resistance and reactance. Reactance is
determined by frequency.

2024. CRUCC 2.1 - Car Radio Universal Code Calculator © 2.1

CRUCC 2.1 - Car Radio Universal Code Calculator © 2.1 new
with USB Dongle Protection, supports Remote Updates (RU)

!!!! EUROVOX !!!! algorithm is added to this new version of CRUCC 2.1

This software calculates car audio factory original security codes from
radio serial numbers, master codes, hardware jumpers (diods,links) for
audio devices from various car audio manufacturers: ALPINE, BECKER,
BLAUPUNKT, CLARION, DELPHI, ETRONICS, EUROVOX, FUJITSU-TEN, GRUNDIG,
MATSUSxITA, NAKAMICHI, PHILIPS, PIONEER, VISTEON and OEM models.

CRUCC 2.1 includes compact radio database, to make easy identification
of calculation algorithms by unit type...

Elevated above grade. Drive I-70 from Denver to Grand Junction and
tell me how "elevated" it is. Or drive I-25 from Wyoming to New
Mexico and tell me how "elevated" it is. 15 feet above grade, fine.
But down in valleys wherever possible to avoid climbing mountains.

Those "atypical" receivers are your biggest market, because that's
where people would be listening.

>
> I have run Langley Rice maps on the main Denver FMs, like KBCO, and there is

My radio says differently. When push comes to shove, I'll believe the
car radio over a coverage map.

> >
> > If you were really concerned about clean signals, you'd be screaming
> > at receiver manufacturers to clean up capture ratios so that the
> > multipath doesn't garble them to hell and gone.
>
> If this was possible, it would be done. HD solves this, anyway.

HD solves nothing. HD will make signals unlistenable while analog
will continue to be listenable.

And fixing the capture ratio is not only possible, it was done. My 30 year old low-end Rotel has a capture ratio of 1.0 dB. But receiver manufacturerers would rather save $0.15 per unit because they listen to people like you who say that such things don't matter in a local market... and on and on and on it goes.

This is why DXers -- real DXers, not someone driving the interstate -- like 60's vintage car radios. The problems were solved, but some consultant told them they didn't have to worry about quality because the radios would be used only for local market.

>
> In the entire Southwest, the skywave listeners of KFI do not reach 10% of

Did I not suggest that they might make between 5 and 10% of the total at night somewhere up there? I'm sure I did.

>and are less than 2% of
> total listening. Since a poll like Arbitron has greater margin of error than
> 2%, that data is meaningless and no advertiser cares.

That's true.

> Please try to get it: advertisers dictate.

Yes. They dictate based on a loaded methodology. If I was locked in a windowless box my whole life and everyone told me the sky was green, I would believe the sky was green, too. But whatever I believe, whatever assumptions I operate under, doen't change the fact that the sky is blue.

>
> No, we look at listeners by MSA. Metro LA. Metro Las Vegas, Metro Phoenix,

> > made my first purchase of substance in Ft. Collins two weeks ago.
>
> You are so unique no advertiser will care about you as you do not behave in
> a predictable way.

Not really. I'm pretty typical of my community in that way. There is very little selection and/or quality in any of the nearby "cities," so people go to real cities like Denver and Boulder to get what they need.

If they buy groceries, it isn't a big deal, generally, although our selection is poor. Washing machines can be bought.

Audio equipment, a good meal, quality furniture, auto repair and service, entertainment -- music, sports, stage performances -- all require you to go to Denver to get it.

So we go. All of us.

There is no "Ft. Collins Avalance" hocky team, or "Ft. Collins Rockies" baseball team. Nor should there be. They draw plenty of people from this nowhere place in your world, and they are smart enough to know it.

> I KNOW how advertisers buy, and know how to keep buyers happy, which is by
> providing large, local audiences all over the USA.

They buy based on the best information they can get.

I am suggesting that your information is fundamentally flawed, and you are insisting it is not only good enough, it is perfect. It is not.

That would drive me nuts. I am very aware of artifacts, especially
from aliasing. The digital NPR feed sometimes drives me nuts with all
the aliasing artifacts in some of the programs.

> frequency dependent, but I'm working on it.

< Snip >

An antenna or transmission path has a characteristic impedance based on its physical characteristics. This is a property different from reactance, which is a response to some frequency. Example would be a folded dipole compared to a dipole. The characteristic impedance of the dipole is about 72 ohms but the folded dipole is four times this at 288 ohms due to a division of current paths in that design. This is an effect also seen in transformers where the impedance ratio value is the turns ratio squared.

A single wire Marconi type can be thought of as a transmission line where the two conductors are the wire and the earth under it as the other conductor. Based on this the RF current in the wire will see a characteristic impedance as determined by the wire diameter and the distance from ground with air as the dielectric between them.

Larger diameter wire for the same distance will cause the wire to assume a lower impedance and the closer the wire is to the ground the impedance would also be lower.

Whatever the characteristic impedance of the wire is if you stimulate it with energy at some frequency it will react to that energy with a combination of the characteristic impedance and added to that a value of impedance based on the electrical length of the wire. The reactance of the the wire would be the combination of the characteristic impedance and the reflected energy together.

The consequence of the aforementioned situation is the reactance of the wire will swing from very small values to very large values through the characteristic impedance value of the wire and basically you will also get this same response from classical Hertizan antenna types. The characteristic impedance of the wire will be measured with a zero reactance value.

When you stimulate an antenna at a resonance point then the energy you put into it is not being bucked by a reflected wave of energy coming back at it at some phase combination of forward and backward energy and so the antenna looks like a resistive load where this resistance is a combination of the conductor losses in the antenna elements and the radiation resistance of the antenna.

The characteristic impedance is measured when the antenna appears to be a resistive load with no reactance added or subtracted from that value is another way to look at it. Another way of saying this is all the energy goes into the antenna, which appears to be just a resistor of some value.

I wrote this a couple of different ways, being redundant of purpose. Does this make sense to you now?

I was just joking. Yes the magnetic pole is drifting and lately the
field strength is weakening over time.

I've wondered at what sort of involvement Drake had in the E1. Size issues aside, the many similarities between the Sat 800 and the SW8 are so undeniable; there's little doubt that Drake technology went into the Sat 800. Such similarities, however, do not extend to any such degree with the E1, although the sync detector on the E1 is about as good as I've encountered. Larry Van Horn wrote in his E1 review for Monitoring Times that "a call to Walter Hess, the technical support manager at Eton, confirmed that Drake did have a major hand in the electronics of this unit."

Yes, but would the Secret Service stops the cops from questioning you
for 14 hours?

Dick Cheney Hunting Vest Night Scheduled for March 17th
http://www.lasvegaswranglers.com/wranglers.aspx?pid=106&pressid=258
FOR IMMEDIATE RELEASE:
Monday, March 13, 2006
Josh Fisher

Las Vegas NV -

Bright orange hunting vests with the slogan "DON'T SHOOT, I'M
HUMAN" will be given to the first 1,000 fans that attend the Las
Vegas Wranglers game on Friday, March 17. The vest will also feature a
Wranglers' logo.

The Las Vegas Wranglers, a professional hockey team that has already
secured an ECHL playoff spot, will play host to the Alaska Aces at the
Orleans Arena at 7:05 with doors opening at 6:00 pm.

"We thought it might be fun to announce the event for Friday
night's game, but not actually hand them out until the next day,"
said Wranglers vice president and COO Billy Johnson. "But that's a
subtlety in punch line that might not sit well with paying customers
for Friday's game."

In addition to the Dick Cheney vests, the team will wear green St.
Patrick's Day uniforms that will be auctioned to fans during the game
with a portion of the proceeds to assist in Wranglers' supported
charities.

The Las Vegas Wranglers play at the Orleans Arena in Las Vegas and is
an affiliate of the NHL's Calgary Flames.

Yea like you have tried it for yourself idiot....I have taken RF connectors apart after 18 years of temps of 105+ down to -20 and lots of rain...ice and snow and found em to be as good as the day they were installed. Out of hundreds I've sealed this way I've never had one to leak...And I'm not going to mention the hundreds of thousands that were sealed this way on CATV connectors for the last 20 years in this little town (Chicago) and never turned up a water soaked one yet.

Why do you put down stuff you know nothing about you drug riddled chunk of shit?

That so called putty/tape stuff you talk about is crap according to people that put up and install antenna's for a living and thousands of amateur radio operators as well.That putty from 3M is good for electrical work inside the house...house wiring to be exact....but not antenna conections that sway in the breeze ...if the connection moves at all it opens the putty and lets water in . Think about it dipshit??!!

Fuck off retard...Your just full of bad advice arent you?!!

Gosh. I had no idea we had a Cable Guy in our midst.

Out here we use Snap N Seal connectors for TV cable. I've never heard
of using Permatex on RF connectors. I must've had a sheltered 40
year career in broadcast electronics.

BTW, you use the putty under a standard wrap of 33+. This is only for
mid-air splices or other straight-line connection. A ''bulkhead''
connection should always be in an enclosure.

Telaman,
Perhaps the fault in my understanding is that there is more than one type of impedance talked about here and in other posts. Perhaps the speaker is talking about one and the listener is listening for the other. In the above paragraph you mention characteristic impedance and impedance based on electrical length. I conclude from your post here that the characteristic impedance always remains the same unless some physical changes are made to the components, antenna or feed-line. Whereas the other impedance (it would be nice if it also had a unique name rather than just other impedance) which is based on electrical length is therefore based on frequency. The introduction of frequency introduces reactance which affects the other impedance, but the characteristic impedance remains the same.

If that is the case (please correct if not) then the following should be true:

If I have an antenna with a characteristic impedance of, say, 600-ohms, and I have a coaxial feedline with a characteristic impedance of 50-ohms, the two are missmatched and I should use a balun (unun?) with a ratio of 600-ohms to 50-ohms to properly connect the two components. At this time I now have this antenna properly connected to this feedline, and as yet no frequency issues have been addressed. Is this correct? If yes, then it could be said that a balun (unun) matches these two physical devices without frequency of operation considerations. True?

I'm not being argumentative, I'm asking. I have a loop antenna whose characteristic impedance I do not know. I want to determine its characteristic impedance. I also want to match it to my receiver (50-ohm nominal input) the best that I can. I ask myself if I need a matching device? These are the issues that I am working on and before I try to tackle the answer, I first want to understand the theory.

Thank you.
Al KA5JGV

BBCWS 5975 very noisy during Delano tx 0300 UTC. Curiously, the Montsinery tx at 0200 is fine. Radio Havana on 6060 was full of static last night too. I switched to 9590 but that was too weak. 6000 was abruptly off at 0500, even though it's supposed to continue until 0700.

I have an AN-1 antenna. I see no difference appearance-wise between the AN-1 and the AN-12 pictured on the Sony website. The picture on the Sony website shows the mounting apparatus in assembled form, whereas the Universal website shows all of the various components in pre-assembled form.

While I've never bothered measuring the AN-1 in millimeters, the specs seem to be the same as the AN-12: frequency coverage (including the two frequency range settings), the same "ANC-2"-designated coupler, same power requirements (including the provision for 6xAA powering).

I guess the question is, did Sony take the old AN-1 and modify it in some way and produce some new model? If so, might we see it in the States? I had thought Sony was pulling out of the shortwave market.

Well, I'd say so, since I never found the AN-1 a particularly stellar performer on LW or MW. Nonetheless, there is a switch on the front of the control box for two frequency ranges:

0.15-30MHz (LW/MW/SW) and 1.6-30MHz (SW)

But, to be fair, the AN-1, while providing somewhat modest gain on the SW bands, was a decent match for portables (where overload would be a concern); the ability to mount it out of doors gave it an advantage not to be found with the now-popular indoor active loop antennas (AN-LP1 and that Kaito/Degen one) designed for portables.

Not sure, it would be interesting trying to find out though.

I wonder if Tomas Hood has done any studies on this? He has an excellent SW propagation page at http://prop.hfradio.org/ . It even features forums for discussion of the subject, although I have not had time to really delve into it.

Yes you are right about the fact that I am talking about two different
things.
1. The "characteristic impedance" of a device.
2. The "impedance" to RF at some arbitrary frequency.

People are used to thinking of #2 as a complex equivalent number of AC
resistance to be calculated in circuit analysis problem.

Antennas are a little different as we must consider all the
ramifications of the actual physical construction of the device.

In basic circuit analysis capacitors, inductors and resistors that make
up a circuit are looked at as simplistic lumped elements. Calculating
impedance to an AC signal implicitly means the circuit resistance to
current flow must consider a frequency to compute a value.

A better simulation of a circuit will consider the parasitics of the
elements and the characteristics of the paths between them, including
the electrical distance between them and through them for a more
accurate answer at higher frequency operation but again the nature of
coming to an equivalent value of impedance to a RF signal numerically
requires the frequency be a part of the resistance to current flow.

Antennas are transducers in a physical sense taking a local RF current
loop and translating it into an EM wave through space. Other language
would call this a near field to far field conversion.

The antenna electrical and physical characteristics require that you
look at more than just taking the view of circuit analysis affecting
the local current loop or near field. The physical properties must also
address the near field becoming the far field so the description of the
antenna as an RF circuit must also be more complex. The antenna can not
be seen as just a impedance number at some frequency because that would
not address its implicit purpose or utility.

Since an antenna is designed to be operated at some frequency the
calculation of impedance is known or considered as integral to the
meaning of the appearance of the value an antenna would present as a
resistive load with no reactive component. This value is a combination
of the conductor loses in the antenna itself, local current loop or near
field and is in combination with the radiation resistance, EM field
around the antenna or far field.

Many paragraphs to come to the fact that antenna impedance implicitly
uses a known frequency to compute the resistive value of the antenna as
a load. A corollary here that is that when you mean to use the antenna
at some frequency you adjust the electrical lengths accordingly so the
antenna ends up being that characteristic impedance value where you
intend to operate it so now the impedance value becomes a number
irrespective of frequency because it is implicitly considered. Circular
definitions at their best.

This is all part of actually using an antenna. You start with a design, adjust the elements to be resonant in frequency you intend to use it. Changing the operating frequency means that you change the electrical length again to what is appropriate so you can see the frequency of operation does not matter and that the antenna has a "characteristic impedance value" when speaking about that design in a generic sense because you make the adjustments to it in actuality.

Answering your question above if the antenna was a balance type where the coax is inherently unbalanced then you would use the BALUN to transform the 50 ohm impedance of the transmission line path to the 600 ohm resistive load of the antenna. BAL-UN is a term meaning BALanced to UNbalanced for an impedance transforming device. If you used an inherently unbalanced single wire to the coax then you would use an UNUN. UN-UN means UNbalanced to UNbalanced.

2097. T2FD antenna opinions solicited

Newsgroup: rec.radio.shortwave
Date: 2006-03-15 02:54:34 UTC
From: N9NEO <yzordderrex@verizon.net>
Message-ID: <1142391274.758209.324850@j52g2000cwj.googlegroups.com>
Source record: 67386

I will hang T2FD in attic this weekend and have question about slope vs bandwith. Well here is same post I just made to yahoo group. I have some big dipoles for 75m and 160m, but I don't think they work so good for SWL. I also have a very difficult time to climb up on roof especially when cold. I'm a fraidy cat with heights(but no prob to jump with a chute). This may be just an interm antenna till WX gets better.

"Last time I was up in the attic about a year ago it looked like I had about 12 foot of headroom. I was figuring I would put up a T2FD about the full length 45 feet of attic and I could get a decent slope. I was up there Saturday and now it looks like it's about 8 foot of headroom. I figure at the rate it's shrinking I better hurry up and get the thing up while I can still stand up in the attic.

So dilemma is length of antenna vs the slope. I can get a 20 degree slope with a 23 foot antenna for about 14mc bottom end or a 30 degree slope with a 16 foot antenna for a 20mc bottom end. I am more interested in SWL than ham bands. Antenna/attic is orientated along a line parallel to 135/315 degrees."

I am looking for a comparison of the two potential installations.

Thanks & regards,
Bob
N9NEO

Is this a T2FD which you made (or are making) yourself, or is it from
RF Systems or B&W? I'm guessing home made since you talk about
changing the length.

I've used an RF Systems 45 foot T2FD at two different location with two
different angles because of the supports I had to work with, one maybe
20 degrees and the other at only 10 degrees!

Can't say that I noticed a difference. If anything, I'd say that I
pulled in more of the really low-power stations from Africa, South
America, Asia and the Pacific (omnidirectional) with it sloped at only
10 degrees all over the frequency range, from 60 meters to 19 meters
(never got anything that I'd consider low-power in the 16 meter band).
I did notice that I was able to DX in the 90 meter band only when the
angle was 20 degrees. Propogation always plays a huge part in whether
or not you receive a signal, but these results were pretty consistant.

I also believe that a big part in the exceptional signal-to-noise ratio was the use of a Transi-Trap and a ground rod, even though the set-up at 10 degrees had a pretty poor excuse for a rod (2 foot brass tube I found at some hardware store, don't even know what it was supposed to be used for).

I'd say use the full 45 feet with no slope.

BTW, where do you live? Its getting close to Spring everywhere here in the States. Maybe six more weeks and you could set up your antenna outside in relative warmth, if you're a Yankee like me :-)

Greetings Yodar! I forgot to mention that I also have the Ten Tec active antenna and for me it does not work quite as well as the Radio Shack version. I have seen the Ramsey kit online but have not really studied it. Part of what I am wondering about is what are the advantages of having an outdoor active antenna verses an indoor active antenna. Thanks for the suggestion! Have a great week! Jon in South Carolina.

Great catch! And a great QSL to add to your outstanding collection.

Speaing of AIR, my wife's grandfather used to be an AIR anchor back in the 1950's. While with AIR, he started the program "Jaimala": a music program for the faujis (army personnel). The program is still on the air on AIR's Vividh Bharati program line-up. I believe 10330 kHz is the only shortwave frequency on which VB programming is aired...no idea if Jaimala makes it onto AIR's time-slots for that frequency.

At any rate, it's always a pleasure to receive AIR. It would be nice if other South Asian broadcasters (e.g. Radio Pakistan, Bangladesh Betar) were more easily heard in the U.S.

Not much for me to write today as I'm about to head to the Yarra River and enjoy the opening night of The Commonwealth Games here in Melbourne, Australia.

Today I post on a number of international newsgroups, as well as posting on aus.radio.broadcast, so G'day to anyone that may be reading this from outside Australia.

March 15 is a special day because I get to remember this day, 17 years ago, as the first day I crossed the international dateline and landed in the United States of America, first in Honolulu, then in Los Angeles.

17 years later, I've got to give come credit to my favourite Los Angeles radio brand, namely 102.7 KIIS FM (http://www.kiisfm.com/main.html) who since 1989 have retained the same logo and much the same format. One of KIIS-FM's positioners - "LA's #1 Hit Music Station" has inspired our local 101.9 Fox FM to adopt a similar image.

Catching a shuttle bus from LAX to Anaheim on the night of my family's arrival, I was amazed how scattered the freeway was with advertising billboards, and how.....er......."orange" the clouds in the sky looked (to explain what I mean, here's a link to http://en.wikipedia.org/wiki/Light_pollution :)

In coming days, I'll try to recall some more about my time in the United States, but not just for its own sake.

*radio*active is a new "blogging" report.

In my next post, I'll also explain what my objectives are for this new blog.

Put up the attic antenna anyway. It would not be much trouble to put it
up and you might like the way it works. More antennas means more options.

It'd be nice to pipe the sound from my receviers into a number of different rooms. It'd be even nicer to do this without stringing speaker wire everywhere.

Has anyone used wireless speakers for this purpose and, if so, how did it go?

Steve

- Do believe most wireless devices broadcast on the same frequency;
- so , if you buy some, keep the receipt

Turn on everything in the house, then try the wireless speakers for an
hour or so..
see how they work with the channel changer 0n the T.V..

- and Lookout if your Neighbor gets the same set..!

Ok then it will be about 45 feet at whatever dangle it ends up at.

And yes, I am born and raised Connecticut Yankee. QTH here now is
Uxbridge, Ma. Gateway to the beautiful Blackstone valley.

And yes, more antenna options are good.

regards,
Bob

Since we're at the bottom of the sun spot cycle I'd guess an antenna
with a 14 mc bottom end would be better than 20 mc. If anything, I'd
extend it a bit to get it even lower, but you know what frequencies
you like listening to better than I do.

Mate, grab Wayne Mac's new book and turn to page 282 :)

2UW - The Radio-Active Station.

That's no misprint - 2UW, not just 2UE, have used the "Radio-Active"
slogan.

So 2UE are not the first to put this "play on words" into a radio
context.

As I'll reveal here soon, I intend putting radio*active* into two
contexts of my own.

Apparently there is a connection between thunderheads and the
ionosphere. There are the "Sprites" and other types of flashes seen from
the tops of storm cloud formations.

The man was lost and then he was found and now he's more lost than ever
-- and he's taking us into the darkness with him. It's time to remove him.

By Garrison Keillor

Mar. 01, 2006 | These are troubling times for all of us who love this country, as surely we all do, even the satirists. You may poke fun at your mother, but if she is belittled by others it burns your bacon. A blowhard French journalist writes a book about America that is full of arrogant stupidity, and you want to let the air out of him and mail him
home flat. You hear young people talk about America as if it's all over,
and you trust that this is only them talking tough. And then you read the paper and realize the country is led by a man who isn't paying attention, and you hope that somebody will poke him. Or put a sign on his desk that says, "Try Much Harder."

Do we need to impeach him to bring some focus to this man's life? The man was lost and then he was found and now he's more lost than ever, plus being blind.

The Feb. 27 issue of the New Yorker carries an article by Jane Mayer about a loyal conservative Republican and U.S. Navy lawyer, Albert Mora,
and his resistance to the torture of prisoners at Guantï¿½namo Bay. From
within the Pentagon bureaucracy, he did battle against Donald Rumsfeld and John Yoo at the Justice Department and shadowy figures taking orders
from Dick (Gunner) Cheney, arguing America had ratified the Geneva Convention that forbids cruel, inhumane and degrading treatment of prisoners, and so it has the force of law. They seemed to be arguing that the president has the right to order prisoners to be tortured.

One such prisoner, Mohammed al-Qahtani, was held naked in isolation under bright lights for months, threatened by dogs, subjected to unbearable noise volumes, and otherwise abused, so that he begged to be
allowed to kill himself. When the Senate approved the Torture Convention in 1994, it defined torture as an act "specifically intended
to inflict severe physical or mental pain or suffering." Is the law a law or is it a piece of toast?

Wiretap surveillance of Americans without a warrant? Great. Go for it. How about turning over American ports to a country more closely tied to 9/11 than Saddam Hussein was? Fine by me. No problem. And what about the war in Iraq? Hey, you're doing a heck of a job, Brownie. No need to tweak a thing. And your blue button-down shirt -- it's you.

But torture is something else. When Americans start pulling people's fingernails out with pliers and poking lighted cigarettes into their palms, then we need to come back to basic values. Most people agree with this, and in a democracy that puts the torturers in a delicate position. They must make sure to destroy their e-mails and have subordinates who will take the fall. Because it is impossible to keep torture secret. It goes against the American grain and it eats at the conscience of even the most disciplined, and in the end the truth will come out. It is coming out now.

According to the leaders of the bipartisan 9/11 Commission, our country is practically as vulnerable today as it was on 9/10. Our seaports are wide open, our airspace is not secure except for the nation's capital, and little has been done about securing the nuclear bomb materials lying around in the world. They give the administration D's and F's in most categories of defending against terrorist attack.

Our adventure in Iraq, at a cost of trillions, has brought that country to the verge of civil war while earning us more enemies than ever before. And tax money earmarked for security is being dumped into pork barrel projects anywhere somebody wants their own SWAT team. Detonation of a nuclear bomb within our borders -- pick any big city -- is a real possibility, as much so now as five years ago. Meanwhile, many Democrats have conceded the very subject of security and positioned themselves as Guardians of Our Forests and Benefactors of Waifs and Owls, neglecting the most basic job of government, which is to defend this country. We might rather be comedians or daddies or tattoo artists or flamenco dancers, but we must attend to first things.

The peaceful lagoon that is the White House is designed for the comfort of a vulnerable man. Perfectly understandable, but not what is needed now. The U.S. Constitution provides a simple ultimate way to hold him to account for war crimes and the failure to attend to the country's defense. Impeach him and let the Senate hear the evidence.

Actually Bob that is part of the problem. I am total newbie to SWL and so I don't know which frequencies I would prefer the best. I'm usually all over the place in any band I happen to find myself in. I seem to have the most difficulty down in the shack with the higher frequencies. Antenna situations for swl is not too good here. I have 160m inverted V, 75m dipole, and 5btv verticle. I'll stick the T2FD in the attic for now and that should help near upper bands. Then I'll try a long wire when WX gets better. Part of problem here I'm sure is bad ground too, so lots of work needs to be done still.

regards to all,
Bob

On the surface, the Left and Islam have nothing in common. Islam is a religion and the Leftists are usually secular people. But three years after the war against Islamism (aka as the war on terrorism) began, it is now clear to me that the two groups have many similarities.

It is true that Communists, unlike Muslims, do not believe in God. But this difference is misleading. Both ideologies require in its followers a high degree of faith. A Leftist has a deep faith that it is possible to change human nature so that one day a perfect, just and equal society will emerge.

This is the Communist Utopia. Their dictum, "From each according to his ability. To each according to his needs", reflect their idea of an ideal world. To them, the evils of the world have its source in Capitalism, whose champion is America. Capitalism is based on individual self-interest in which only the fittest survive and the devil takes the hind-most.

Capitalist economies have succeeded in creating wealth and economic growth. But the price of Capitalism is that inequalities will develop as those who more energy and abilities will outstrip the weaker individuals. The Leftists see inequality in wealth as an injustice. In their ideal world, everybody happily works for the common good and all shares any wealth created equally. To the Leftists, the big corporations are seen as agents of greed and exploitation who exploit labor so as to enrich the idle capitalist class.

They also believe that the poverty in the third world is caused by exploitative capitalist economies and their multi-national companies. This view is soothing for the Islamists who can then blame the poverty and backwardness of the Muslim world on an external entity instead of looking inwards for a probable cause. I have always argued that Islam plays a central role in the backwardness of the Muslim world. See my article, "The Problem with Islam".

The Soviet Union, which the Left sees as the closest mankind has gotten towards their Socialist Utopia has collapsed and has moved towards the Capitalist model. The world is heading towards freer trade and jobs are being re-located to places with lower wages. The left is infuriated with these trends.

They are also blind or make excuses about the abuses and human rights violations in the Soviet Union and Cambodia, where millions were murdered or died in the Gulags and killing fields. Prominent Leftist Naom Chomsky at one stage even claimed that the tales of Communist atrocities in Cambodia were invented or at most localized.

Meanwhile, the Muslim world is equally beset with frustrations. Most Muslims are living in poor countries ruled by corrupt, incompetent dictators. This

is especially true in the Middle East. For them, Islam is the Final Revelation and hence Muslims are supposed to be the Best of Mankind. Yet, they have fallen behind. Defeat and western colonization during the past two centuries brought this home to them. In more recent times, the success of the East Asian countries brought fresh humiliations.

This lament for their low estate can be seen in a poem, called Shikwa, written by Iqbal, an ideologue of the Pakistan movement. The poem asks why Allah is unfaithful to Muslims when Muslims remain faithful to Him. A part of the poem says:

"Your blessings are showered on homes of unbelievers, strangers all. Only on the poor Muslim, Your wrath like lightning falls."

Over the past two centuries, reformers like Al-Wahhab, Sayed Qutub and al-Afghani diagnosed the malaise and concluded that Muslims have strayed from the original teachings of their Prophet. All preached violent jihad.

Like Luther, Calvin and Zwingli, these men wanted to strip away all the accretions that accumulated in the practice of their religion. Today, the Islamists seek to unite Muslim countries to restore the Caliphate. It seeks first to overthrow secular Muslim countries so that they can be replaced with Islamic states united under one Caliph as in the days of old. Their ultimate aim is to dominate the world so that Allah's laws is supreme. Islamists see the Islamic state much the same way as Communists see the Communist Utopia - a Shangri-la world where their idea of justice prevail.

That neither has attained their respective goals does not deter them. For both, it is a matter of faith. Faith is belief in something that is not proven. In fact, the available evidence is that both Communist and Islamic Utopias do not work. All attempts in establishing them failed. The Soviet experiment failed. Instead of providing justice and prosperity, it created a sick economy, which required cruelty and oppression to sustain. For the Islamists, Afghanistan under the Taliban is as close as one can get to the Islamists' ideal state. The result is hell on earth, not heaven.

For the Leftists, it is difficult to admit that capitalism, a system built on the greed and self interests of the individual actually produces greater wealth and freedoms than Communism does. Their ideal society, which requires the individual to subordinate his interests for the greater good of his society, cannot be put into practice because it is against human nature.

For the Islamists, it is difficult to admit that their vision of the perfect Islamic state ruled in accordance to God's laws does not work because that would be saying that their religion is false. Muslims are expected to follow closely the words and deeds of their Prophet who lived 1,400 years ago as recorded in the Koran and Hadith. It is of course blasphemous of them to ask if their Prophet's behavior is still relevant or practical today. Both Leftists and Islamists are following false ideologies sustained by the faith.

Failure to establishing their respective perfect societies does not prevent Leftists and Islamists to see America as the enemy of their world-view. This

is rightly so as America is the chief defender of the democratic/capitalist combination that is sweeping the world and leaving them behind.

The Islamists are hostile to the idea of democracy. To the Islamists, democracy is a form of idolatry. It means that man makes the laws through the ballot box. Thus man's law is supreme and not God's laws as revealed 1,400 years ago to the Prophet. It means that democracies worship man, not God.

The Communists are suspicious of Democracy. Democracy, whose champion is also America, is a mask to disguise the fact that it is the greedy capitalists who control this world and not the people. Thus America's wars in Afghanistan and the two Gulf Wars immediately aroused suspicions that these wars were fought at the behest of oil companies seeking profits.

For the Islamists, any attack by an infidel nation is an attack on the Muslim Ummah. It does not matter if America is trying to replace the evil Saddam regime with a more humane democratic regime. What matters is that Iraq is a Muslim country, which is part of darul Islam. When Saddam caused the deaths of hundreds of thousands of people, neither the Leftists nor the Islamists organized any protests.

For both groups, the US is an example of a polity that competes with their vision of where the world should be headed. For the Leftists, it is the Socialist utopia. For the Islamists, it is the Islamic state and ultimately the world ruled by a Caliph in perfect obedience to God's laws. Thus the beliefs of both Leftists and Islamists in their respective false ideologies have given each of them a blind spot.

Both Islamists and Leftists even have the same excuse for their respective failures. After the failure of the Soviet Union, the Leftist will say, "That is not true Socialism". After the failure of the Iranian, Saudi and Taliban Islamic states to provide a better life for their people, Islamists will say, "That is not true Islam".

But both still persist in their fantasies and have formed ad hoc alliances with each other. When America attacked Afghanistan, both opposed it. Both came up with ridiculous conspiracy theories to justify their opposition. September 11 was a plot concocted by the CIA or the Jews. The invasion of Afghanistan was to allow greedy companies to build an oil pipeline.

When Bush wanted to pass the Patriot Act, both opposed it. They know that without the Act, America's efforts to pursue terrorists would be blunted. Of course, not all who opposed the act are acting maliciously with intent to blunt America's ability to deal with terrorists. Some are genuinely concerned with the erosion of civil liberties. But each society must strike a balance between civil liberties and the need to save lives.

After the Patriot Act was passed, the Center for Constitutional Rights successfully challenged a key provision aimed at blocking support for terrorist groups in a Los Angeles Court on behalf of the Kurdish Workers Party in 2001.

According to the book, "Unholy Alliance" by David Horowitz, the Center for Constitutional Rights was founded in 1966 by members of the Communist Party or allied with the Left. Some of its key members are also active in the National Lawyers Guild, who had a long history of supporting the Soviet Union during the Cold War.

The ruling by the LA court in favor of the Kurdish Workers Party was called "a setback for government anti-terrorism policies" by the Wall Street Journal.

Most Muslim organizations, both moderate and Islamist, also dislike the Patriot Act because they believe that it was directed against them.

In 2003, CAIR, American-Arab-Anti-Discrimination Committee (ADC), Muslim Community Association of Ann Arbor (MCA), Arab Community Center for Economic and Social Services (ACCESS) and the ACLU filed suit to declare Section 215 of the USA Patriot Act to be declared Unconstitutional.

Both the Islamists and the Leftists apply a double standard against America. While we don't hear of protests from both groups against atrocities committed by Saddam Hussein, the Iranian Mullah and the Taliban against minority groups and women, we hear no end of the Abu Gharib scandal where nobody was killed.

This is because both groups see in America a successful example and advocate of an alternative vision to theirs on the way human society ought to be organized. Communism and its twin brother Islamism are totalitarian ideologies that seek to sacrifice the individual on the altar of their utopian ideals. Democracy and capitalism, of which America is the champion, celebrates the triumph of the individual. Democracy and Capitalism do work and what the Leftist and Islamist advocate do not. That is why the Leftists and the Islamists are like tweedledee and tweedledum living in fantasyland.

Leftists believe that religion is the "opium of the oppressed". Once their perfect society is achieved, there won't be any need for religion and it would wither away. So they dismiss the Islamist threat. America then is their chief enemy. They would do well to remember what happened to their brethren in Iran after they helped Ayatollah Khomeini to achieve power. They were slaughtered.

The Nazi Connection to Islamic Terror

Amin al-Husseini, regarded in the Arab world as the founding father of the Palestinian movement, chose the path of denying the national rights of the Jews to that tiny area between the Jordan Rover and the Mediterranean Sea known as Israel.

...the Koran explicitly recognizes the Jewish State in the following passage:

...the words of Moses to his people. He said "Remember, my people, the favors which Allah has bestowed upon you...Enter, my people, the holy land which Allah has assigned for you." (Sura V) "...when the promise of the hearafter cometh to pass (at Judgement Day) we shall bring you as a crowd gathered out of various nations. (Sura XVII: 104)
...
In 1936, al-Husseini met with Adolf Eichmann, one of the Nazi masterminds behind the Holocaust against the Jews, in Palestine where Eichmann visited for a few days. Al-Husseini then was put on the Nazi payroll and received Nazi funds which he used to instigate the Arab Revolt of 1937-1939 according to testimony at the Nuremburg and Eichmann trials.

In 1941, al-Husseini played a key role in instigating a pro-Nazi coup in Iraq. Following the collapse of the coup, al-Husseini helped instigate the Fahud, or the murder campaign against the indigenous Jews of Iraq, a campaign that has been compared to the kristalnacht in Germany.

In November, 1941, al-Husseini met with Hitler in Berlin where he was treated as a visiting head of state. al-Husseini spent the war years in Nazi Germany where he was recognized as the head of state of a Nazi-Arab government in exile. Hitler promised al-Husseini that he would be chief administrator of the Arab world after the Nazi "liberation."

While in Nazi Germany, al-Husseini directly participated in the Holocaust against the Jews by preventing the exchange of Jews for German POW's and instead insuring that they went to the crematoria. Al-Husseini led in the effort to train Bosnian Muslim brigades and other Muslim European brigades who were involved in many atrocities. He funneled monies form the sonderfund, money looted from Jews as they were sent to the concentration camps, sending the funds to the Middle East to be used to promote Nazi and anti-Jewish propaganda.
...
Before and during the war, al-Husseini and his ilk were supported by the Nazis while after the war the support came from the Soviet Union and various groups affiliated with the international left. Leftist groups continue to support the radical Islamiso-Fascists as indicated by the anti-Western,

anti-Semitic U.N. Conference on Racism held in Durban, South Africa in the summer of 2001.

Exposing Shocking Horrors Inside China's Concentration Camp

"the Nazis would render the fat of their victims to make soap . . . the fascists of the Chinese Communist Party have improved on the methods of the Nazis. They understand there is more money to be made in selling corneas and kidneys than soap."

With 6,000 victims, the murder at Sujiatun does not yet compare with Auschwitz, Treblinka, or the Gulag Archipelag, to say nothing of the Mao's Great Leap Backward and the Cultural Revolution. However, the same combination of evil, contempt for human life, and assembly-line efficiency that fueled the death camps of the Nazis and the Soviets is there in Sujiatun.
http://english.epochtimes.com/news/6-3-10/39111.html
http://www.theepochtimes.com/news/6-3-11/39169.html
http://english.epochtimes.com/news/6-3-10/39083.html

Less than one day after the Sujiatun camp was exposed by the Epoch Times, the paper's Japanese office "was broken into between the hours of 5 p.m. and 12:10 a.m." Two computers, one laptop and one digital camera were taken.
http://www.theepochtimes.com/news/6-3-12/39228.html

Yet another Epoch Times office attacked: This time it was the Taichung (Taiwan) office that was hit; all computers - desktops and servers - were swiped. click here ... It was the latest in a series of crimes against the paper, the most dramatic of which were the beating of Yuan Li and the Hong

Kong break-in.

So what time are you listening them in UTC hours?

Where are you located? The middle east can be hard to get out here out
he west coast.

Dear Steve,

Why not try what I do. I bought a C. Crane FM transmitter, attached it to the line output of my receiver, and transmit shortwave to any and all FM receivers in my house (and many of my neighbors too, I daresay).

This works very well.

Best,

Joe

Apparently Iran has only 2 or 3 English segments. One of them is the
"Voice of Justice" propaganda station directed at America. The others
are regular VOIRI broadcasts. If you want to hear Quran readings and
prayers you can tune to Saudi Arabia's domestic service on 15170
starting at 0300. Sometimes you can even get it in California. It's all
in Arabic, but Muslims pray the same around the world.

Thanks for replying with the programming information. I'll have to give
Iran a try. Saudi Arabia is one country I have heard the last few months
as they have 500kW transmitters! Israel I have not heard. I used to get
them in the past but not lately.

I don't know where adam214 is located or you are located or whether you
have heard Iran. This is one reason I put my location in the signature
do people don't have to remember or ask.

Have you heard Iran lately and how well?

15:30 for 1 hour in southern Australia,i think it is good to hear there
voice instead of the voice skewed by western media that is the
beauty of SW.

Here is the schedule of VOI copied from my trusty passport to world band :)

0130-0230 6120,9495,9665,11875 (n america)
1030-1130 15460,15480,15600,17660 (s asia)
1530-1630 7330 9635 9940(audible in AUS) 11650 (s asia & SE asia)
1930-2030 6010 7205 7320 9800 9855 9925 11695 11860 (europe,s africa,europe)

All those programs are the English ones

Thanks for the schedule. I'll give it a try.

I just like listening to short wave broadcasts from a distance, radios,
playing with antennas and the content of course. I learned long ago to
value the direct broadcast over the USA media's take on it. Listening to
a direct broadcast from another country usually resulted in a very
different view being expressed. Never trust just one source.

He can't even post on topic reply in an on topic thread. Ask him if he
has a shrink. I doubt he even has a short wave radio.

I for one would appreciate it if the political nut cases would stick to
the off topic flame threads or start their own thread.

2150. Re: Small Vertical {Omni} Active Shortwave Receiving Antenna and Free-Standing "Grounded" Metal Mast {Top-Rail} Mounting

Newsgroup: rec.radio.shortwave
Date: 2006-03-16 10:11:11 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1142503871.213537.62150@i40g2000cwc.googlegroups.com>
Source record: 67541

JON,

READ - Two Do-It-Yourself "Kits" for Ten-Tec :
RF Pre-Amplifier and Active Antenna
http://groups.google.com/group/rec.radio.shortwave/msg/a38c5523e79b8e0a
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/5920

Take your TenTec Active Antenna and mount it on the
Free-Standing "Grounded" Metal Mast {Top-Rail} as
described in the prior post. Use a CB (10m) Whip
Antenna for the Antenna Element. Ensure that you
have a Ground Rod built into the Concrete Anchor of
the Top-Rail and that the Mast is Grounded. Place a
Snap-On Ferrite Core (Bead) within an Inch or two of
both {each} Ends of the Coax Cable Feed-in-Line
between the Actve Antenna and the Radio.

FWIW - Using the Free-Standing "Grounded" Metal Mast
{Top-Rail} is a good idea for 'mounting' small Vertical Antennas.
1 - Elevates the Antenna away from the RFI/EMF envelope
of your House.
2 - Grounds the Active Antenna Module and Coax Cable
Feed-in-Line.
3 - Run the Coax Cable along the ground; or better yet
Bury the Coax Cable under-the-ground as much as possible.

TIP - Ensure that the Free-Standing "Grounded" Metal Mast
{Top-Rail} is located at least 20 Feet from the House and
other structures to also get it away from the RFI/EMF
envelope of your House.

DISTANCE AWAY - Out-and-Away and Up-and-Away are
both Important to Reducing the 'relative' Noise that your
small Vertical Active Antenna must exist in to pick-up and
receive signals. Placing the Antenna Element Out-Side
the House's RFI/EMF Envelope {Physical Distance} is one
of the simplist and most effective techniques in creating
any Low Noise Antenna.

IMHO - You should here a lot less noise and better quality
signals with this Out-Side small Vertical Active Antenna
set-up then with the RadioShack {InDoor} Active Antenna.

hope this helps - iane ~ RHF

2152. In-the-Attic : Terminated "Twisted" Folded Dipole (T2FD) - Think Twisted -not- Tilted !

Newsgroup: rec.radio.shortwave
Date: 2006-03-16 11:56:03 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1142510163.235001.165280@j33g2000cwa.googlegroups.com>
Source record: 67543

N9NEO,

MY IDEAS ON AN IN-THE-ATTIC T2FD ANTENNA :
Old Idea - Terminated 'Tilted' Folded Dipole (T2FD)
[Twisted -Not- Tilted]
New Idea - Terminated "Twisted" Folded Dipole (T2FD)
[Twisted / Flat-not-Tilted / In-the-Attic]

First Build the Terminated Tilted Folded Dipole (T2FD)
as Big as you Can to get down to your "Lowest Desired
Operating Frequency" per the design Formulas.

Second the In-the-Attic T2FD is after all In-the-Attic and so . . .
It Ain't Gone-Ah-Be Tilted - It's Gone-Ah-Be FLAT [.]

QUESTION - What Did the Tilting Do For the T2FD ?
1 - Added to the Broadbanded Frequency Characteristics
of the T2FD Antenna.
2. Added to the Omni-Directional (All-Around 360 Degrees)
Characteristics of the T2FD Antenna.
Note - The TILT of the T2FD Antenna was usually about
30 Degrees and that would mean that the Height of the
Antenna "Vertical Dimension" was 50% of the Length of
the T2FD Antenna plus the Elevation at the Lower Base
(Bottom) Support.

Doing the Math - Your 45 Foot Long T2FD Antenna would
have to have a "Vertical Dimension" Drop of 22.5 Feet and
to keep the Wires overhead a minimum Lower Support
Height of 7.5 Feet for a Top Mounting Support Height of
at least 30 Feet. All sort of hard-to-do in most Attics.

ALTERATIVE - Omni-Directional Antenna Trick :
Build a T2FD Antenna In-the-Attic with a TWIST
Terminated "Twisted" Folded Dipole (T2FD)
- - - Instead of a Tilt :o)

The Ends would both have "Vertical" Spacers / Spreaders
and the Center Spacer / Spreader would be "Horizontal".

The Left-Top-Wire would become the Center-Near-Wire
and then the Right-Bottom-Wire -while- The Right-Top-Wire
would become the Center-Far-Wire and then become the
Left-Bottom-Wire.

If additional Mid-Point Spacers / Spreaders were used
then they would be set at 45*/225* and 135*/315* to
maintain the distance between the two Wires.

When building a T2FD Antenna In-the-Attic :
Think - Twisted -not- Tilted :
Terminated "Twisted" Folded Dipole (T2FD)

MORE GENERAL INFO ABOUT THE T2FD ANTENNA :

B&W makes two general statements about the
Terminated Tilted Folded Dipole (T2FD) Antenna :

* For example, an {T2FD} Antenna for the lower portion of
Shortwave (3 - 18 MHz) will be roughly 33m (110 feet) long,
with conductors spaced 1m (3.3 feet).
[With a Top End mounted about 60 Feet High at 30 Degrees.]

* In order to cover the higher portion of Shortwave (5 - 30 MHz),
this {T2FD} Antenna will be roughly 20m (66 feet) long,
with a spacing of 60 cm (24 inches).
[With a Top End mounted about 40 Feet High at 30 Degrees.]

Build one size or the other = No Formula Required.

My C.Crane FM transmitter has a really poor range. It is okay for transmitting in a car or within twenty feet or so. My bedroom is about forty feet from my downstairs ham station and the C.Crane FM transmitter doesn't do the job. Maybe mine is defective.

I find wireless headsets which transmit on 914 MHz work quite well to spread the sound from my ham station around the house. If I don't want to listen on headsets, I carry a scanner that receives 914 MHz. I think the wireless speakers are the same technology and would work fine.

If you do get the C.Crane, you have nothing to lose. They have a great return policy.

Sure.

Just take a pencil, and where it says "50 Mhz" on the front panel,
write in "27 Mhz". Everyone knows that all linear amplifiers work
equally well on all bands and that suggesting otherwise is just a
market ploy to get people to buy more boxes.

Don't forget to drive it with your "tweaked" Galaxy, Connex or
other "import" radio with the mic gain at 100%, fed with a
pre-amplified microphone. And remember to tune for >>>MAX<<< SWR,
>>>NOT<<< minimum.

And remember to use the international test calling signal:

"AWWWWWWWWWWW-DE-OOOOOOOOOOOOOOOH..."

"AWWWWWWWWWWW-DE-OOOOOOOOOOOOOOOH..."

To lower frequency from 50MHz to 27MHz you need and / or bigger inductance
and bigger capacitance.
2 x pi x f = 1 / sqrt(L.C)

Ok, Thanks for the good links.

If you explain the twist..... so I can understand. I don't think you are telling me to just build a T2FD and make the feed point horizontal. You are telling... Ok, I think I got it... So the loop will actually go thru a 180 degree spin I think. is what you are telling me.

Yes, biggest problem was that roof wasn't high enough the last time I was up there. I can stand up in it no prob and last weekend daughter's BF and I laid a 24" wide path of plywood down the full 45 foot length.

Ok, I'll give this a try and see how it works out. I got some #43 ring cores that I was going to build a 4:1 balun on. I may get bored one day and fire up a transmitter into this setup, so I'll wind a few turns on it so I don't smoke it.

thanks again
Bob

I would try to get by with the existing variable caps at the early stage until you have got the thing sort of working. There may be a small tuned input circuit or there may be a passive resistor. To start, I would double the number of turns in the tank circuit of the final and in the input coil (if any) and tune the variable caps to see if there is any output. I used to use a light bulb to coax fitting to look at how close I was getting to resonance. Remember there is a lot of voltage on the final so discharge the power supply caps through a 100 ohm or so resistor each time you fiddle. This amp may be grid-driven so keep the tests very short to avoid burning up the grids. There are ways of getting the coil/capacitor values correct without using the final voltage if you let any of the smoke leak out of the resistors.

Hell, I'd just keep adding turns until the dingus quits shutting down.
Sniff for parasitics, adds caps as necessary.

I am located in Sacramento, California. I have never heard the "Voice of Justice" tx. It comes on at an inconvenient time for me. The couple times that I've tried for it it has been just below the audibility threshold, meaning that it sounds like mumbling because it's not strong enough. I understand that the further east you are the easier it is to hear. I might try the VOIRI tx to Southeast Asia, but that is at an inconvenient time for me as well. As for Israel, I have never heard them in English. I have picked up their Hebrew tx, but not English.

One other idea -- since your attic will have plenty of connection
points -- a fanned dipole; one for 12 meters, another for 17 meters;
feed both with one length of coax, no balun needed. And the two
dipoles should be within yelling distance of most of the upper
frequency swl listening bands, when you're not using the antenna for
ham things.

The US media is controlled by a few large corporations beholden to their friends in the US govt. News is considered entertainment. Substantive news is nearly impossible to come by, as the big corporate media is too busy reporting "human interest stories". Ecuador is in chaos but the US media doesn't care. The army has dramatically stepped up its bombing of Iraq but the "investigative reporters" won't touch it. I regularly listen to the BBC for regular news and Radio Havana for stories that the US media won't touch with a 39 foot pole.

> > Steve, K4YZ
>
```

IF CBers had a bit of discipline, courtesy, and knew more, as a whole,
what they are doing, the noise could be decreased by
quite a bit! ?But NO! ?EVERYbody has to have an amp to talk 2 miles down the
road, or to
the next truck right in front of him. ?Before the 70s, I used to lay on my
bed with a BACK OF
SET Radio Shack antenna and a Raytheon 5-channel CB and talk in a 5-8 mile
radius. ?We had
a regular round table most every night. ?Everybody was courteous, took
turns, didn't use power,
and we had no trouble talking--even when that roaring skip was in we could
talk over it because
those people weren't using extra power, either. ?When the BIG AMPS came
along to replace self
confidence lost I-don't-know-where, you couldn't talk a mile away. ?Now,
more than ever, there
are operators who think THEY have to out-talk the rest in order to feel
powerful and replace the
"leaking" testosterone. ?Hey, I don't have a magic answer because you and I
both know that it
\won't stop without some serious enforcement. ?It still boils down,
nonetheless, to the fact that
those truckers have those 40 channels that they can use legally. ?The hams
have the 10 Meter
band via licensure. ?It STILL isn't the hams' fault that those channels are

screwed up, nor does
it justify stealing frequencies from the rightful users--whether they are
occupied or not.

I do have something of a solution, but nobody would like it. Put CB up on
FRS and MURS where
there is little occasion for skip, and the truckers wouldn't be bothered
with all that noise. Form
associations and use voluntary bandplans to separate users, so that interfer
ence would be kept to
a minimum. Yeah, we know that wouldn't be met with joy, don't we? We want
to work "DX",
play with BIG POWER, and complain about how we can't talk without our amp.
I don't mean to
be ugly, but that's what it amounts to. Really, you can't have it both
ways! That is truly what needs
to happen; because the general public is NOT radio savvy, VHF/UHF is where
CB needs to be to
prevent all those "turf" wars, skip, and racket. It WOULD make a
difference. Not likely to happen soon. Still, never say
never.....

Then why don't you say so.... I've used Google since it's inception
and it has NEVER used the phrase "Presence" in conjunction with
"Results".

Bible Voice uses 11645 in Arabic from 1630-1730 to the Middle East from a transmitter in Germany.

So possibly them? Where are you getting the schedule info for Voice of Lebanon?

What chaos in Ecuador are you talking about? People protesting the Pan
American highway and a incursion by the Colombian military chasing some
drug runners doesn't sound like chaos to me. There are some election
rallies or protests about trade agreements but so what?

I agree its getting like that in Australia,i listen to SW for my news
whenever i can.:)

2208. BBC Programs Heard on DC-area FM stations.

Newsgroup: rec.radio.shortwave
Date: 2006-03-17 03:02:49 UTC
From: Beloved Leader <Kim_Jong_Il@volcanomail.com>
Message-ID: <1142564569.647027.30770@p10g2000cwp.googlegroups.com>
Source record: 67699

There was a column in the Sunday Washington Post about programming from the BBC showing up on local non-profit FM stations in the DC area.

http://www.washingtonpost.com/wp-dyn/content/article/2006/03/10/AR2006031001721.html

http://tinyurl.com/zg4g2

Radio News With A British Accent
Sunday, March 12, 2006; Page B08

You may have noticed a lot more British accents on local radio these days. The BBC World Service has become a fixture on WETA and WAMU, bumping the local programming that once was dominant.

WETA-FM, for example, now airs at least four hours of BBC World Service Radio -- unfiltered -- each weekday. WAMU-FM also is airing much more BBC programming, including on its overnight schedule.
....

There were some LTTE's this morning on this column.

http://www.washingtonpost.com/wp-dyn/content/article/2006/03/15/AR2006031502070.html

http://tinyurl.com/z2x3y

The BBC's Window on the World
Thursday, March 16, 2006; Page A22

David Pitts ["Radio News With a British Accent," Close to Home, March 12] said that it was disturbing that the BBC has taken a prominent role in U.S. public radio and implied that the British Foreign Office exerts editorial control over the BBC World Service. That is false.

The BBC World Service is funded by a grant from Britain's Parliament, administered by the Foreign Office. But the Foreign Office has no say in the BBC's editorial agenda.

On editorial matters, the World Service is responsible only to the director general of the BBC and the BBC Board of Governors. These principles are laid out in the broadcasting agreement with the United Kingdom.

PHILIP HARDING

Director
English Networks & News
BBC World Service

London

... goes on to page 2....
The last letter is really funny.

http://www.washingtonpost.com/wp-dyn/content/article/2006/03/15/AR2006031
502070_2.html

http://tinyurl.com/g45q5

The BBC's Window on the World
I strongly disagree with David Pitts's commentary lamenting the abundance of BBC World Service content on WETA and WAMU-FM. I'm fascinated by the world perspective provided by the BBC's news and commentary, as well as by the "World Have Your Say" show, which features callers from around the globe, including the United States.

While the BBC news does displace local content, I'm hardly alienated from my locality, considering the availability of neighborhood newspapers and The Post; local news on radio (including WAMU and WETA) and television; local news and commentary e-mail lists; and many Web sites.

Mr. Pitts suggested that while government funding makes Voice of America "to some degree" a propaganda organ, we should beware the BBC's coverage because it is tainted by government funding. I'm happy to trade the lost hours of local gabfests for the BBC's world window.

Wouldn't the world improve if more people broadened their perspectives, rather than hearing from only their like-thinking neighbors?

GABRIEL GOLDBERG
Falls Church

David Pitts said that BBC World Service Radio is the main competitor of Voice of America (VOA).

That used to be true, but the Board of Broadcast Governors, which controls the VOA, has announced that it intends to discontinue almost all English-language radio broadcasting at the end of September because so few people are listening. That just might be the case because the board has turned off many VOA transmitters.

Travelers abroad who want to hear news of the United States might try Radio China (Beijing). It has 24-hour English-language radio service.

NEIL CURRIE

Potomac
The writer is a news anchor at Voice of America.

Uh, that's two years out of date-at least. Shortwave schedules change
every six months for the big guys and can be totally unpredictable for
small stations. That's why so many listeners rely on Internet sources
like ILG or Eibi.

Supposedly, they have the entire country shut down. Shortages of food,
major highways blocked, etc. I suppose that the reports I heard, mostly
over the BBC, have been exaggerated (journalists will be journalists),
but it sure sounds bad. Then again it could be localized to Quito (the
protests) and the reporters are indeed flying off the handle with
statements like "will the system hold together long enough to have new
elections?" Bolivia has this sort of thing happening in La Paz all the
time and life goes on, even in the cities.

Iran was booming into Brooklyn this evening. I listened to them for a while. Their signal was loud and clear even on my SW77 and 7600GR. I'm surprised they're hard to hear on the West Coast, but then again it's hard to hear N. Korea here.

I recently moved out of an apartment building into a woodframe house and my listening conditions have improved *dramatically*. I did okay in my old place, since I had a Wellbrook mounted outside. Still, it was impossible to receive anything using a portable indoors--probably because of the aluminum paint on the roof of the building.

Once I got to the new place, I was shocked by what I could receive just using my SW77 and its whip. Awesome, especially when running on batteries.

I also now have the Wellbrook working...though I had to replace the fuse because a length of coax I'd been using somehow developed a short.

Steve

BBC feed is cheaper than producing stuff locally. Most AM stations air
syndicated talk, and only have 1 or 2 local talk hosts. I know that the
local Air America station airs AA feed all day except for one four hour
slot.

In fact, the BBC has been at odds with the UK govt on several issues,
including Iraq (the BBC was bashing the war as British troops were
invading).

Actually, the two structures are totally different. VOA was under an
office that handles what essentially is the US govt's voice. The BBC is

quasi-independent, like the US Postal Service is quasi-independent of
the US govt.
>
>
> David Pitts said that BBC World Service Radio is the main competitor of

HAHAHAHAHAHAHAHA
(snort, choke)
HAHAHAHAHAHAHAHA

I can't believe that the VOA is actually suggesting that people turn to
China for news about the US. I'd only be more surprised if they said to
listen to RHC, or VOIRI/Voice of Justice. If so few people are
listening, then why are China and Thailand expanding SW services, why
are Chinese portable SW radios selling briskly over Ebay? Maybe so few
people are/were listening to VOA because 15 years of cutbacks left it a
shadow of its former self, with that much criticized News Now rolling
news format. It sounded like an American domestic all news station, say
KCBS in San Francisco. That may be fine for Americans, but it doesn't
fly in the rest of the world. People want to hear in depth analysis and
reporting and features. IBB has decided that people want to hear music,
thus Radio Sawa. Again, the IBB is programming for an American audience,
but in Arabic. The two cultures are in many ways opposite.

How the heck could one stand to listen to AA all day to find that out?

2230. Re: In-the-Attic : Terminated "Twisted" Folded Dipole (T2FD) - Think Twisted -not- Tilted !

Newsgroup: rec.radio.shortwave
Date: 2006-03-17 07:26:59 UTC
From: Bob <warthog9@pacbell.net>
Message-ID: <7xtSf.2211$tN3.1238@newssvr27.news.prodigy.net>
Source record: 67721

The T2FD style antennas are most popular for NVIS communication, where the intent is to transmit and receive nearly straight up and back down within a few hundred miles on freqs generally lower than 12MHz. The T2FD does this best at lower elevations where itï¿½s less than .25 wavelength above ground at highest operating frequency. Itï¿½s gained popularity with military frequency hopping and ALE stations because of itï¿½s instant broad band charm. With that said, one problem I see is placing the antenna in the attic will put house wiring right underneath the antenna, causing the pattern to point mostly up and not at a low angle to the horizon where you want it for SWL DX (same for any horizontal ant in the attic). It will also be more susceptible to RFI from stuff within the house. The T2FD is generally a low noise antenna and it also requires about a 16:1 balun, not a 4:1. You will seriously degrade the performance if you try to feed it with anything less than the difficult to obtain 16:1 flavor.
Bob

LOL!!!

Very interesting...320 posts, almost all of them political per se, not complaints about OT posts. (Sorry, didn't have time to read all 320, but the ones I did read *clearly* demonstrated the irony).

I think "hypocrisy" defines our boy up on his high horse quite well. Yet another example of "Do as I say, not as I do".

There has a being a news radio in Australia for years which has BBC and programs from different sources all over the world i dont see the problem.

> http://www.abc.net.au/newsradio/programs/

I think the guy would shit himself, if he saw all of this diversity non-american stuff on the radio station he mentioned.I think he is being a wanker BBC is better than any american stuff.

BBC is a regular on public radio and television and I find it to be a good addition to the news programming already available on those stations. Clearly it displaces other content, but whether local, national or international programming that was displaced would be hard to determine. British programming has been a regular on public radio and television since the early days. I hope Pitts is not lamenting the availability of high quality dramatic programming of non U.S. origins as well. I see news from BBC as adding to the already wide range of programming on public radio and television.

Guys, this is only the beginning. The World Radio Network (>
http://www.wrn.org/)is promoting other shortwave broadcasters as well.

I'm ok with this. It's fun to switch from the BEEB on World Band to the
BEEB on my local NPR station, hearing the same thing.

News about the world is available from so many sources now that I don't understand the risk of having a non U.S. source of news on public television. Actully if they would devote some air time to non-U.S. news sources such as Radio Beijing, Al Jazeera I think we would be the better for having that information.

I'll try not to get too carried away with this thought, but public television and radio runs a real risk of being left behind if they don't include news and programming from outside the U.S. Fortunately they have chosen to do so for a long time.

NPR is pretty world class with their newscasts. The closest
domestically produced programs generally available in the USA, at any
rate.

PRI also does an excellent job, in partnership with WGBH and the BBC
on ''The World'', middays.

Forget it, Scott...Morkie is drawing welfare for a "disability",
and any demonstration that he can do something to overcome his
"disability" means he'd have to come off welfare and get a real job.

He DOES claim an IQ of 248, though...Makes ya wonder what all that
"MENSA" silliness is about with intellects like Morkie, doesn't
it...?!?!

For those of you just getting to know "Mark Morgan, KB9RQZ" via
his spamming and cross-posting of RRAP and other "rec.radio" groups, a
little intro is due.

Mark started in here about 8 years ago with his functionally
illiterate diatribes, mostly trying to get support for his "waivers"
for Morse Code due to alleged neurological deficits, among which he
alledges being "dyslexic".

The problem is Morkie tried to get an allergist to write his
"waiver" for him. After having claimed an IQ of over 240, one has to
wonder on what two fingers he added that up on. It was suggested he
see a neurologist, but like every attempt to help him, he told those
who suggested it to get ####ed.

On finding out that I was an enlisted retiree from the USMC,
Morkie started in on tales of how >>>HE<<< was not only an officer, but
a COLONEL in the US Army "chemical corps", and that he was DRAFTED
ta-boot!...As if that meant a rat's pack of snot in this forum!

Of course Morkie didn't count on anyone actually being able to do
math better than he...You see, based upon his birthday (which was once
in QRZ), Morkie would have only been SEVEN years old when the drafted
ENDED in the United States...

Anyone seeing a pattern here?

When he was busted with this fact, he then relented and "admitted" that he was "only" a lieutenant, but that his unit CO wouldn't let him resign even though he's an admitted sexual deviate. Of course he's since changed even THAT story, and he now tells a tale of how he was an enlisted clerk in the Army, discharged for emotional problems.

Yeah...Right. A "clerk" who can't even SPELL "clerk"... ! ! ! !

Over the past several years, Morkie has alternatively denied being a mental health patient, then admitted that he's being treated for "anger issues". He's also lied about being in trouble with the law...You see, Markie likes to "care" for his elderly father by taking advantage of him, then skirting the law. It's been a close shave.

Now Morkie's moved from his previous QTH in south-central Illinois to the Michigan Upper Penninsula in order to (A) avoid the aforementioned abuse issues, and to (B) take advantage of more lenient welfare laws that allow him to pork out at home while allowing you and I to "earn" his income for him.

Among his many NG credits are his claims of being stalked, his admission (and only redeeming attribute) that he not only lies, but does so without moral reservation, and that he believes that children should be TAUGHT to lie.

Morkie now "claims" to be married, but can't seem to produce any evidence of it, other than to point to the recent licensure of a female-sounding named person who shares his POB in Chassell, Michigan.

Oh yeah...His "wife"...Allegedly a law clerk or paralegal of some sort, they were allegedly married in Israel. No doubt a green card scam if they are indeed "married". Obviously she doesn't care enough about him to take his name, even to have it hyphenated with hers.

So ...for those of you just tuning in, sit back and enjoy the flailings of Mark C. "I Am A Drafted Gay Pagen Chemical Corps Officer" Morgan.

He never disappoints!

73

Hello,

A while back I thought I saw something about Chuck Harder returning to
Shortwave. Does anyone have any schedules/frequencies? I've checked
Chuck's web site, but as usual, it's woefully out of date.

Hank

Please remove the "z"'s from the email address for

The unique value of public radio and television lies is the breadth of
the sources and depth of the coverage. And that comment extends
beyond news and analysis to documentaries and dramatic series as well.
I was literally spellbound by the Ken Burns Civil War series and
dramatic programs the quality of Upstairs Downstairs are common.

> "anger issues".
another lie

I never said I was being treated for anything anger issues or not
>He's also lied about being in trouble with the
> law..
where?

never been in trouble with law, except the occional speeding ticket

Now Steve did falsely alleg I was abusing my Old man, and it was
investagted and I was cleared
>.You see, Markie likes to "care" for his elderly father by taking
> advantage of him, then skirting the law. It's been a close shave.

hardly
>
> Now Morkie's moved from his previous QTH in south-central Illinois

Illiopis township includes the exact center of the state of Illinois by
some measure (by others a neighorring township does bu steve never lets
facts interfer in his lies)
> to the Michigan Upper Penninsula in order to (A) avoid the
> aforementioned abuse issues, and to
really? that is news to me
>(B) take advantage of more lenient
> welfare laws that allow him to pork out at home while allowing you and
> I to "earn" his income for him.

no wlefare income either

just steve string togther a series of lies
>
> Among his many NG credits are his claims of being stalked, his
> admission (and only redeeming attribute) that he not only lies, but
> does so without moral reservation, and that he believes that children
> should be TAUGHT to lie.

yes indeed I do belive that all person should lie in the right
circumstance

Steve reported me to child abuse authorities and they agreed ..with me
obviously
>
> Morkie now "claims" to be married, but can't seem to produce any
> evidence of it, other than to point to the recent licensure of a

what prove do you desire?
>
> Oh yeah...His "wife"...Allegedly a law clerk or paralegal of some
> sort, they were allegedly married in Israel.
what is the problem with that?

are you antisemitic as well?
> No doubt a green card
> scam if they are indeed "married".
no doubt in your mind, but reality is different

she as well as myself are US citizens we choose to travelto Isreal for
our Marriage and Honeymoon
> Obviously she doesn't care enough
> about him to take his name, even to have it hyphenated with hers.

well I thank you one her behalf for once calling her a she rather than
a he

but we simply choose to live our lives as we see fit without consulting
the likes of Robeson

and indeed there we have the one "crime" I am guilty of, being
different something that Robeson can't stand for in even the slightest
degree... and I do far beyond the slightest degree I admit
>
> So ...for those of you just tuning in, sit back and enjoy the
> flailings of Mark C. "I Am A Drafted Gay Pagen Chemical Corps Officer"

he can't

he is so afraid of me that he must reatin the abilty to follow my every
word and denouce what he sees as my shortcomings (some real some just
the result of fevered imagination) to world

you see steve is afriad of bisexual people

science the most likely reason is that steve has problem with represed
bisexaul urges

so steve can't kill fill me, bt he can't tstlak my every word over the
net

he also likes to pretend he eye on the ground amoug the good citizens
up here in MI

John,

Although I am not a cheerleader for Public Broadcasting, I agree with
you about having many news sources. It's a reason why I listen to World
Band.

But it's not the only one. I like messing about with antennas and
software to improve reception/dsp on my Ten-Tec Rx-320. If I did not
enjoy that, I'd be more than happy with podcasts via WRN.

When it comes to SWL, process is as important as product.

All best,

Ed

strange to you fine I agree
but why do you care?

why is a proper topic for RADIO NG's

I bet I get no real answer to that

Id be happy to never discuss the matter in radio gruop if children like
you and the other steve and Dave and few others wanted to talk about
.....
GASSP .....radio

but you still porve you are a zenophobe just like Robeson, threatened
by my mere existance plus the facts I am not ahomsed of my private
life. I do wish people had the good manners to leave it private but
that you and others are uncivilized barbarians is not my doing

I agree. Overall, I have been quite happy with WETA's shift to an all news/talk format w/substantial portions consisting of BBC programming. I gotta say, though, that, in my opinion, the World Have Your Say program isn't really up to BBC standards.

I guess some classical music fans have been the main losers in WETA's content overhaul. For classical fare, my tendency was always to tune to WGMS, anyway. Admittedly, I miss the program of medieval & classical liturgical music that used to air on WETA at 10pm on Sunday nights. For me, that one program was the real loss...

Right, WRN has some excellent program content from a wide variety of international broadcasters. In fact, it was to a large degree Sirius's inclusion of WRN in their channel line-up that swayed me from signing on with XM. Months back, before doing a comparison of between the two, I had simply thought I'd sign up with XM, since the E1 receiver was to be XM ready. But as it is now, the XM section of my E1 lies dormant...oh, well, with the much more versatile plug-n-play units so cheap for both XM and Sirius, I really see no reason to use the E1 for sat radio reception, anyway.

It would be nice if WRN had R. Bulgaria and AIR on board.

Yes, there have been some notable losses on local public radio. I was
a long time fan of Dick Cerri, but his folk program was dropped quite a
while ago. Still glad to hear Hot Jazz Saturday Night and Thistle and
Shamrock. I certainly understand that a mix of programs from 20 years
ago may not attract as many listeners today and I'm willing to live
with the changes. Overall their programming is still top notch.

Agreed, "The World" is an excellent news product. NPR's
top-of-the-hour news briefings are well done, too. NPR's two flagship
programs, Morning Edition and All Things Considered, are okay, although
something of a mixed bag. I sometimes find myself tuning away when
they attempt the occasional folksy human interest stories (it's just
not something that NPR does well, in my opinion). Oh, and then there's
some Romanian guy (Codrescu) who attempts these humor spots on All
Things Considered....ughhh....I'd rather listen to nothing at all than
to endure that guy.

I have heard him several times on 12160 at 3pm est. Sometimes someone else is on instead so his appearances are intermittent. Unfotunately reception of 12160 has been terrible at this location so I haven't been able to listen. Some of his material is supposed to be available as a podcast.

Amps, whether certified or not will end up as they always do,,,,,,used on 11 meter and the freeband in addition to the hammie bands, regardless of what the FCC does or doesn't do.

Haven't had much luck on triple five lately,,,you been sandbaggin there lately? Most of my action has come from ssb recently. Send me an email and let me know next time you're working some dx near Dixie. Take it light and try to fly under the radar.

Interesting, I had simply thought that the 30-min news segments aired
on such stations as WHUT, MPT, and WETA were BBC WS television
feeds....the 30-min news segments that air every hour on the BBC WS
television schedule.
http://www.bbcworld.com/content/template_tvlistings_net.asp?pageid=668#start

Sometimes when these 30 min segments go off, you can well see that
further BBC news content is being continued but that your local station
is carrying only a half-hour snip of a larger news program...

Right, I myself love to watch American Experience. Then there's
Frontline....excellent TV journalism.
My very favorite PBS program, though, is Masterpiece Theatre
(previously Exxon Mobil Masterpiece Theatre, before our friends at
Exxon pulled their financial backing). Bleak House, which recently
aired on Masterpiece Theatre, was a top-notch drama in every way.
Amazingly well done. A lot of the dramas aired on Masterpiece Theatre
seem to be BBC productions, although Kidnapped (which was aired this
past autumn) was the product of some production company in New Zealand.

Of course, there are some duds here and there on PBS... Charlie Rose
is the ultimate in mediocrity, even if he does on occasion have an
interesting guests. I won't comment on Boohbah; that's something
you'll have to experience on your own www.boohbah.com/zone.html

Don't forget Radio Prague. It's the rare broadcast that does not refer with contempt to its erstwhile Communist overlords and/or the Nazis. Listening to the people who lived through such times puts things into perspective.

And some of the female newsreaders have sultry voices. Woo. Woo.

As for the BEEB, its editorialists are as bad as ours. But unlike our MSM, it still has correspondents all over the world. For pure reporting, they're hard to beat.

Good to see that you recovered from the disk crash. You can always reset
the news group in a news reader but with the volume in this news group
it can be a pain to find a post again. Google news groups is a better
place to find a thread when you loose one.

Well, if you've only listened to five minutes, you haven't listened long enough to really give it a shot.

My old girlfriend hated Howard for years, but listened to a couple of shows in my truck, and has been hooked for about 10 years now.

I can't usually stand it when the bands/singers come in and he lets them play, and generally kisses their asses for a half hour or so, even when I like the songs. Some of them are just plain great guests and I can take the music and ass kissing when they are on.

The girls undressing stuff is kind of worthless on the radio, but on TV, that's a different thing.

The stuff that other performers have ripped off from him over the last 25 years is amazing.

The phony phone calls, the people who melt down when asked a "bad" question by a Stern phoney reporter, the freaks, the fighting between the main people on the show all amuse the hell out of me. And Howard's tales of what he did the night or weekend before.

I would pay for just Howard alone. Between his channel and "raw dog" (Uncensored stand up), I haven't listened to AM or FM since I got Sirius.

No flames....

Opie and Anthony are C grade Howard imitators/ripoffs at best.

Okay, I see that BBC World Ltd recently entered into a partnership with Discovery for the distribution of the BBC World channel in the United States. In your previous message, though, what's with the "AIR" bit?

http://www.broadcastingcable.com/article/CA6301780.html?display=Breaking+News

Discovery To Distribute BBC World

By Anne Becker -- Broadcasting & Cable, 1/25/2006 10:58:00 AM

Discovery Communications will distribute international news network BBC World News in the U.S. Discovery will now seek cable and satellite carriage for the 24-hour international news channel, which already reaches 128 million homes in 200 countries but has not been available as a stand-alone network in the U.S.

The pairing brings the first international news network to Discovery's portfolio, which includes 27 entertainment networks, and builds upon Discovery's current partnership with the BBC to distribute BBC America.

American viewers have had access to daily half-hour BBC World News programming on 229 PBS stations under a 1998 deal with Public Television station WLIW New York. As of now, the programming will still air on PBS.

BBC World programming has also run on BBC America, which reaches some 43 million homes through digital cable and satellite distribution. Discovery has distributed BBC America since its launch in 1998 and runs a BBC World News block weekdays from 6 a.m. to 9 a.m. and a half-hour program at 6 p.m. BBC World News, owned by BBC subsidiary BBC World Ltd., launched in 1995.

Discovery will try to gain carriage for the international news network at a time when cable and satellite companies are already strapped for bandwidth and skeptical about viewers' appetite for international news.

Upstart 24-hour global news network Al Jazeera International has had a difficult time eking out U.S. distribution for its upcoming spring launch. The network has inked carriage deals in several other countries, including an 8-million-home deal with BSkyB in the U.K., but after months of talks has not yet announced one carriage agreement in America. Plus, global news network CNN International is fully

distributed by U.S. cable and satellite providers.

Discovery has no carriage deals to announce as of yet for the network, but a company representative said distributing BBC World News is "a high priority" for its affiliate sales group, which is in talks with cable and satellite providers.

The BBC And Discovery Communications Sign New Partnership

BBC World Ltd
1/25/2006 11:21:27 AM

BBC World News, the BBC's 24 hour international news and information channel, now available in the U.S.-

Today (January 25, 2006), BBC World Ltd announced a new long-term partnership agreement with Discovery Communications, to distribute the BBC World News channel in the U.S. The partnership builds upon the success of the BBC's entertainment channel, BBC America, which is also distributed by Discovery.

BBC World News will be the sole international news channel in Discovery's distribution portfolio, at a time when research studies* show a significant increase in demand from U.S. audiences for international news.

The BBC World News channel has access to the BBC's unparalleled global newsgathering operation, enabling the channel to go beyond the sound bite to provide expert objective analysis of global issues affecting the world. In December 2005, the New York Daily News** reported that: "BBC World News is the best model out there for serious coverage in a tight TV format."

BBC World News is available 24 hours a day, seven days a week in 128 million homes in 200 countries but, until now, it has not been available in the U.S. BBC World's Director of Distribution and Business Development, Jeff Hazell, commented: "Discovery Communications is the market leader, committed to delivering the highest quality channels and marketing support to the U.S. multi-channel industry. That experience, plus Discovery's proven track record and considerable success with the BBC brand to date, will be invaluable in the roll-out of the BBC World News channel in the U.S."

"U.S. consumers are ready for this unique news service - one that provides an impartial, global perspective on domestic and world events," added Bill Goodwyn, president, Affiliate Sales and Marketing, Discovery Networks, U.S. "We look forward to working with our distribution partners to deliver this compelling content in a 24/7 channel."

*Source: PEW Research Centre June 2004 found that U.S. interest in international news has increased by 15% over 2002 levels

** Source: David Bainulli, the TV critic of the New York Daily News December 06, 2005

-END-

'Note to Editors'

BBC World News, the BBC's commercially funded international 24-hour news and information channel, is owned and operated by BBC World Ltd, a member of the BBC's commercial group of companies.

BBC World News is available in more than 200 countries and territories worldwide, and reaches 271 million households (128 million 24-hour homes) and more than one million hotel rooms. BBC World News launched in its present format in 1995 and is funded by advertising and subscription.

BBC World News has had an agreement with the Public Television station WLIW since 1998, and through this arrangement, 30-minute BBC World News programs are shown daily on 229 PBS stations throughout the U.S.

Viewers can sample BBC World News programming on BBC America each weekday morning from 6am to 9am ET, in addition to a 30-minute program each weekday evening at 6pm ET.

BBC World News has access to 2,000 journalists, 250 foreign correspondents and more than 50 overseas newsgathering bureaus.

Discovery Communications, Inc. is the leading global real-world media and entertainment company. Discovery has grown from its core property, the Discovery Channel, first launched in the United States in 1985, to current global operations in more than 160 countries and territories with 1.3 billion cumulative subscribers. DCI's over 90 networks of distinctive programming represent 25 network entertainment brands including TLC, Animal Planet, Travel Channel, Discovery Health Channel, Discovery Kids, Discovery Times Channel, The Science Channel, Military Channel, Discovery Home Channel, Discovery en Español, Discovery Kids En Español, Discovery HD Theater, FitTV, Discovery Travel & Living (Viajar y Vivir), Discovery Home & Health and Discovery Real Time. DCI's other properties consist of Discovery Education and Discovery Commerce, which operates 120 Discovery Channel Stores. DCI also distributes BBC America in the United States. DCI's ownership consists of four shareholders: Discovery Holding Company (NASDAQ: DISCA, DISCB), Cox Communications, Inc., Advance/Newhouse Communications and John S. Hendricks, the Company's Founder and Chairman.

BBC America brings audiences a new generation of award-winning television featuring razor-sharp comedies, provocative dramas, life-changing makeovers and news with a uniquely global perspective. BBC America pushes the boundaries to deliver high quality, highly

addictive and eminently watchable programming to viewers who demand more. BBC America is distributed by Discovery Networks. It is available on digital cable and satellite TV.

For more information about BBC America visit www.bbcamerica.com.

Here in Calgary Alberta Canada, the BBC is on CKUA 93.7 FM, which is
also a non profit station. It is nice to hear the beeb, as in my
location, the BBC on shortwave is a real tough catch, and some times
simply unlistenable. It would be nice to hear the VOA on either MW or
FM, locally. The CBC, which is also non profit has international news
such as the DW, Australia and the Netherlands. Here in Calgary on CBC
One 1010 am, in the early mornings.

w/regard to "BBC World" in the USA:

http://www.bbcworld.com/insite/content/template_usa.asp?pageid=484

BBC World News

30 minute live news bulletins are availalble every Monday through Friday across the USA. These broadcasts are available to public television stations through an alliance between BBC World and WLIW New York Public Television.

BBC World draws on the resources of the world's largest news organization, BBC News, with 58 international bureaux and 250 correspondents worldwide. These broadcasts mark the first time live, international, daily newscasts have been made available to viewers without cable access.

BBC World's newscasts augment PBS stations' position as a news resource for viewers by offering international news as it happens, from one of the world's most respected news sources.

What is BBC World?

BBC World is the BBC's commercially funded international news and information television channel, broadcasting in English 24 hours a day for a global audience. BBC World can be received in 270 million homes in over 200 countries around the world. Of these 128 million homes receive the channel on a 24-hour basis. In addition over 1,000,000 hotel rooms, 23 airlines and 25 cruise ships also carry the channel.

BBC World in the U.S.A.

Newscasts from BBC World, the BBC's commercially funded 24-hour international news and information channel, are available throughout the United States of America via PBS.

BBC World News is broadcast on over 220 public television stations in the U.S. through an agreement with WLIW21, the public television station based in New York. Through this agreement, BBC World news bulletins now reach around 86% of U.S. television households (around 90 million homes). This covers every major market including New York, Chicago, LA, Miami, Dallas, Washington DC, Seattle, San Francisco, Boston and Houston.

The earth's ozone layer is located in the stratosphere, between 11 and 31 miles above the earth's surface. The Mesospere is next, about 31 to 50 miles up. The ionosphere starts at about 43-50 miles and extends up to about 400 miles. So... probably no effect on shortwave radio propagation.

I'm not aware of any effect of Ozone on the Ionosphere,
where HF radio signals are refracted back to Earth,
Harvey. (The term "Shortwave" is too imprecise.
"HF," or High Frequency, has a standard definition,
3 to 30 MHz.) I only know of Ozone doing it's dirty
work in the Troposphere and Stratosphere.

Not the World Service.

''BBC World Service is funded by a Parliamentary grant-in-aid,
administered by the Foreign and Commonwealth Office of the British
government. The FCO, in close consultation with World Service, is
involved in the process of deciding which languages are broadcast ,
but editorial control of the programmes rests entirely with BBC''.

The K7RA Solar Update

SEATTLE, WA, Mar 17, 2006--The recent news regarding projections for a huge solar Cycle 24 brings in more mail daily. All of us want to see lots of exciting space weather over the next decade, but not everyone is convinced. While I wouldn't count him among dissenters, Jon Jones, N0JK, sent in this article from a year ago (several readers mentioned this) that predicts a very small Cycle 24 and also claims to use a successful prediction method. Read it and weep (or not).

Several people wrote this week to say they were enjoying the quiet conditions. Without many sunspots, the maximum usable frequency (MUF) is low, but there is less noise and absorption.

Mike Schatzberg, W2AJI, writes:

"The low solar activity seems to have produced some exceptional conditions on 20 meters within the last week. The band has been most reliable all day long here in western NC . . . Propagation is marked by very low atmospheric noise. Weaker stations are easily pulled out, provided QRM permitting. I am working great numbers of QRP stations, worldwide. Although we all are hoping for the beginning of the new cycle and greatly improved propagation, I do well remember the QRM that accompanies great propagation. Things don't really seem nearly so poor as in the bottom of other cycles which I have experienced. Maybe it's much better equipment and antenna systems than in years gone by."

I suspect Mike's better antenna system may help. Check out the 5-element 20 meter Yagi.

Mike also writes:

"Early morning contacts include strong European propagation, which continues well into the later afternoon. Signal reports of well over S9 are common, from both sides. Propagation into India, and Southeast Asia is quite good in the early morning times also. Regular contact is found with Jakarta, Indonesia, also. Later afternoon, the long path opens to the South Pacific, with

unbelievable VK propagation. Yesterday's contacts, including VK3OK, VK2ZF and many others,
produced reports of from 20 to 25 DB over S9 in both directions. The band goes longer, short
path to the Pacific about 2 to 3 hours after dark. KH7F has his usual S9 signal here at my
location. South America remains strong for most of the evening."

Orrin Brand, K9KEJ, is using a ground-mounted vertical antenna on 20 meters with no radials.
He writes:

"Late mornings in the Chicago area have been rather unusual of late. I'm able to hear and work
Africa, Eastern Europe and VK land, all in a matter of minutes on 20 meters. European signals
run anywhere from S7 to 10/9, while east and West African stations run a solid S9. The VKs and
ZLs go anywhere from S5 to S8--all on the vertical."

Average daily sunspot numbers and solar flux values were down just slightly this week when
compared to last, and the geomagnetic indexes were up just a bit. We only saw one day with
zero sunspots, and there weren't any really stormy days with high geomagnetic K and A indices.

The prediction for the next few days is a solar flux value of 75, and, in fact, that continues in
Thursday's prediction from the US Air Force for the next 45 days. The USAF also predicts
Sunday, March 19, will be a day of geomagnetic activity, with a planetary A index projected to
reach 20. The five-day projection for planetary A index from March 17-21 is 8, 8, 20, 15 and 12.
This slightly higher activity is based on what was occurring in the area of the sun that will be
facing us this weekend, looking back to February 19-22 when the planetary A index was 6, 20,
17 and 12.

This projection for geomagnetic activity seems shared this week by Geophysical Institute
Prague, which projects quiet conditions for March 17, 22 and 23, quiet to unsettled for March
18, unsettled for March 20 and 21, and unsettled to active on March 19.

For more information concerning propagation and an explanation of the numbers used in this
bulletin see the ARRL Technical Information Service Propagation page. An archive of past
bulletins is on the ARRL Web site.

Sunspot numbers for March 9 through 15 were 12, 12, 0, 18, 14, 34 and 22, with a mean of 16.
10.7 cm flux was 72.9, 72.2, 74, 73.2, 72.6, 73.6, and 74.2, with a mean of 73.2. Estimated
planetary A indices were 4, 12, 12, 6, 3, 4 and 7, with a mean of 6.9. Estimated mid-latitude A
indices were 3, 9, 9, 3, 2, 2 and 6, with a mean of 4.9.

How much would you want for it, instead of converting it? I operate 6
meters and could use it.

I doubt it. It's not all that many years ago that FCC prohibited
ASCII use on the air, because it's a code. But it's your license.
Besides, they hardly ever prosecute anyway.

Ozone is not an ion.

In any event, ozone is replenished by the very thing from which it protects us--ultraviolet radiation.

Regards,
John

Ah, okay....gotcha. My mistake: earlier, I had thought that you were suggesting that the 30 minute BBC news bulletins on PBS were not content from BBC World. But the differentiation you're making is between the BBC World (the television channel) and BBC WS on radio. Both do draw on the same BBC News resources; but I guess the argument that you would make here is the fact that BBC World is dependent upon subscription and advertising dollars, the product they put out would differ from that of the non-commercial BBC WS on radio.

Despite a few fluff programs on BBC World (e.g. that automotive-related show), the content overall is actually pretty good, in my opinion. Given a choice between BBC World and BBC WS, though, I'd opt for the latter, as I guess you would, as well. I'm glad to see that Discovery and BBC World have entered into this agreeement to make available BBC World in the U.S. As far as television news networks go, BBC World has a profound and distinct content edge over the lame news (I should say, entertainment-posing-as-news) networks of CNN, MSNBC and FOX.

Depends on where I am, really, as to how reception is. It can be
difficult in D.C. and NOVA, given the many strong local signals which
can easily overload a cheap FM receiver (even w/antenna down). Radios
w/a good FM section, like the E1, would be able to pull WBJC out, even
in the worst locale. With my Sangean 606A, however, receiving WBJC is
a hopeless affair in D.C. proper and in Arlington and Alexandria
counties.

Classical music is the best thing the public service stations around
here have in their favor. There is only one commercial station in LA
using the classical music format.

I wouldn't want to drive my Jeep in there. I might get bogged down in the mud!

Radio, lets see, echolink (AM) or skype (FM) with video tonight...
My biggest complaint about echolink is that all the calls with a
3 in them are grouped together, even if the 3 call is not in 3 land.
There needs to be an update that allows one to designate which area
they're really in. I can't stand seeing FL, CA and HI and can't find
the ones that have moved here and kept their 2 or 9 call.

Thank you. I, too, have checked that frequency, but haven't heard
him. It was probably his replacement I happened to catch. He used to
have a regular (rather boring, IMHO -- but that's subjective when it
comes to Chuck) replacement on days when he was, uh, doing something
else, back in the day.

Hank

This from the RSGB:

The next sunspot cycle will be 30-50 per cent stronger than its predecessor and will begin as much as a year later than previous forecasts, according to scientists from the US-based National Centre for Atmospheric Research. If the prediction is correct, the next solar maximum could be the most intense since the historic solar maximum of 1958.

The National Centre for Atmospheric Research scientists believe they have mastered the art of accurately forecasting solar cycles.

They have developed a computer model that they claim has simulated the strength of the past eight solar cycles with an accuracy of more than 98%.

This amazing precision is achieved by using the subsurface movements of sunspot remnants of the previous two solar cycles to calculate the strength of the next cycle. Mausumi Dikpati, the leader of the research team, said: "Our model has demonstrated the necessary skill to be used as a forecasting tool."

The Sun undergoes 11-year cycles of activity, from peak storm activity to quiet and back again. But until now there was no precise method of predicting their timing and strength. Being able to accurately predict the sun's cycles years ahead could help society prepare for periods of intense solar storms, which can disrupt communications, slow down satellite orbits and crash power systems.

Solar storms are thought to be caused by twisted magnetic fields in the Sun that suddenly snap, releasing huge amounts of energy. They usually occur near dark regions of concentrated magnetic fields known as sunspots.

Source record: 67754

I remember reading the first book which scooped the enigma story. Title and author: I forget ;/.

Anyway it said:

1) Britain used decoded E messages to learn what the Germans were targeting that day during Battle of Britain. Air Command moved their fighter patrols more or less into the general area where the Huns would be showing up. This doubled effective air power and turned possible English defeat into a victory. According to the author, England's radar system was helpful, but the highly secret E code breaking was what was decisive.

2) Rommel's Africa Corp went from winning to losing thanks to decoding messages which had the details of when and where the German fuel conveys were to show up next in the ports. England let a few convoys get through in order to hide the fact that they were reading the mail, otherwise they sank most of the rest, IOW, Montgomery won in Africa 'cause his tanks had a reasonable supply of petrol, and the Huns' didn't. If Germany's messages were in the clear, they would have had enough fuel, but they weren't.

3) Germany lost the war in the Atlantic 'cause decoding revealed where their 'milk cow' tankers were lying in wait to refuel the long range attack submarines.

4) Decoded E messages told Ike where the German armies were waiting in France, which changed D day from a giant gamble to an almost guaranteed success.

Perhaps the book was an exaggeration, but pretty much the author believed Hitler would have had a stalemate, not a defeat. Except for the captured Enigma devices which enormously aided the economical deploying of Allied forces.

Source record: 67755

Bob,

N9NEO {Bob} has the #43 Ferrite for building his own
Baluns so a 4:1, 9:1 or 16:1 should not be a problem.

4:1 (2T-to-1T) = 24 Turn Primary Antenna Windings
and 12 Turns Secondary Coax Cable Windings

9:1 (3T-to-1T) = 30 Turn Primary Antenna Windings
and 10 Turns Secondary Coax Cable Windings

16:1 (4T-to-1T) = 32 Turn Primary Antenna Windings
and 8 Turns Secondary Coax Cable Windings

The other Part of the T2FD is the Terminating Resistor
and an In-the-Attic T2FD Antenna may require some
Adjustment {Play-With} the Terminating Resistor to
get the Antenna to yeild the All-Band Coverage that
is sought from the T2FD Antenna.

more to think about - iane ~ RHF

2366. Threat to streaming audio

Newsgroup: rec.radio.shortwave
Date: 2006-03-18 09:49:11 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <4823ckFi3i9bU1@individual.net>
Source record: 67757
Cross-posted to: alt.radio.broadcasting,rec.radio.shortwave,uk.media.radio.bbc-r2

The Phonographic industry, the group representing record companies in the UK, are to make it impossible for radio stations to stream audio outside the UK. A clause in the PPL's new license for commercial UK broadcasters may result in the shutdown of those stations' Internet streams to listeners everywhere
else in the world beginning April 1.

Sounds like there needs to be a lobby group set up quickly!! Any volunteers?

Mike

2367. Re: NEW Sony AN-12 Active Antenna

Newsgroup: rec.radio.shortwave
Date: 2006-03-18 10:07:58 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1142676478.373953.182280@p10g2000cwp.googlegroups.com>
Source record: 67758

BAD,

"The Sony AN-1 Active Antenna provides good reception
over the range .15 to 30 MHz."
<http://www.universal-radio.com/catalog/sw_ant/2206.html>

The Sony AN-1 Active Antenna Coverage would be 150 kHz to 30 MHz
+ Longwave Frequencies = 150 to 500 kHz
+ Medium Wave {AM BCB} = 500 to 1700 kHz
+ Shortwave Bands {HF} = 1.8 to 30 MHz

IMHO - The Sony AN-12 Active Antenna would appear to be
a re-make {up-grade ?} of the Sony AN-1 Active Antenna.
http://www.ecat.sony.co.jp/avacc/avacc/acc/index.cfm?PD=19147&KM=AN-12

hope this helps - iane ~ RHF

The BBC has the power to limit the streams to users with UK based IP
addresses; even if this does happen we will see little effect.

IIRC, in 1955 GM was still using the 'one-piece' radios in most vehicles.
Those had a 6x9" speaker in them. For a replacement you have to get one with
a fairly small magnet structure (not one of the newer monster ceramic magnet
types) because of the limited space between the speaker grille and the
chassis of the radio. There is an area where the back of the speaker can
stick through the chassis, but it's no more than about 3" or so wide, again,
IIRC.

Weeks after thse invasion of Iraq began, Fox News Channel host Brit
Hume delivered a scathing speech critiquing the media's supposedly
pessimistic assessment of the Iraq War.

"The majority of the American media who were in a position to comment
upon the progress of the war in the early going, and even after that,
got it wrong," Hume complained in the April 2003 speech (Richmond
Times Dispatch, 4/25/04). "They didn't get it just a little wrong.
They got it completely wrong."

Hume was perhaps correct--but almost entirely in the opposite sense.
Days or weeks into the war, commentators and reporters made premature
declarations of victory, offered predictions about lasting political
effects and called on the critics of the war to apologize. Three years
later, the Iraq War grinds on at the cost of at least tens of
thousands of lives and hundreds of billions of dollars.

Around the same time as Hume's speech, syndicated columnist Cal Thomas
declared (4/16/03): "All of the printed and voiced prophecies should
be saved in an archive. When these false prophets again appear, they
can be reminded of the error of their previous ways and at least be
offered an opportunity to recant and repent. Otherwise, they will
return to us in another situation where their expertise will be
acknowledged, or taken for granted, but their credibility will be
lacking."

Gathered here are some of the most notable media comments from the
early days of the Iraq War.

Declaring Victory

"Iraq Is All but Won; Now What?"
(Los Angeles Times headline, 4/10/03)

"Now that the combat phase of the war in Iraq is officially over, what begins is a debate throughout the entire U.S. government over America's unrivaled power and how best to use it."
(CBS reporter Joie Chen, 5/4/03)

"Congress returns to Washington this week to a world very different from the one members left two weeks ago. The war in Iraq is essentially over and domestic issues are regaining attention."
(NPR's Bob Edwards, 4/28/03)

"Tommy Franks and the coalition forces have demonstrated the old axiom that boldness on the battlefield produces swift and relatively bloodless victory. The three-week swing through Iraq has utterly shattered skeptics' complaints."
(Fox News Channel's Tony Snow, 4/13/03)

"The only people who think this wasn't a victory are Upper Westside liberals, and a few people here in Washington."
(Charles Krauthammer, Inside Washington, WUSA-TV, 4/19/03)

"We had controversial wars that divided the country. This war united the country and brought the military back."
(Newsweek's Howard Fineman--MSNBC, 5/7/03)

"We're all neo-cons now."
(MSNBC's Chris Matthews, 4/9/03)

"The war was the hard part. The hard part was putting together a coalition, getting 300,000 troops over there and all their equipment and winning. And it gets easier. I mean, setting up a democracy is hard, but it is not as hard as winning a war."
(Fox News Channel's Fred Barnes, 4/10/03)

"Oh, it was breathtaking. I mean I was almost starting to think that we had become inured to everything that we'd seen of this war over the past three weeks; all this sort of saturation. And finally, when we saw that it was such a just true, genuine expression. It was reminiscent, I think, of the fall of the Berlin Wall. And just sort of that pure emotional expression, not choreographed, not stage-managed, the way so many things these days seem to be. Really breathtaking."
(Washington Post reporter Ceci Connolly, appearing on Fox News Channel on 4/9/03, discussing the pulling down of a Saddam Hussein statue in Baghdad, an event later revealed to have been a U.S. military PSYOPS operation--Los Angeles Times, 7/3/04)

Mission Accomplished?

"The war winds down, politics heats up.... Picture perfect. Part Spider-Man, part Tom Cruise, part Ronald Reagan. The president seizes the moment on an aircraft carrier in the Pacific."
(PBS's Gwen Ifill, 5/2/03, on George W. Bush's "Mission Accomplished"

speech)

"We're proud of our president. Americans love having a guy as president, a guy who has a little swagger, who's physical, who's not a complicated guy like Clinton or even like Dukakis or Mondale, all those guys, McGovern. They want a guy who's president. Women like a guy who's president. Check it out. The women like this war. I think we like having a hero as our president. It's simple. We're not like the Brits."
(MSNBC's Chris Matthews, 5/1/03)

"He looked like an alternatively commander in chief, rock star, movie star, and one of the guys."
(CNN's Lou Dobbs, on Bush's 'Mission Accomplished' speech, 5/1/03)

Neutralizing the Opposition

"Why don't the damn Democrats give the president his day? He won today. He did well today."
(MSNBC's Chris Matthews, 4/9/03)

"What's he going to talk about a year from now, the fact that the war went too well and it's over? I mean, don't these things sort of lose their--Isn't there a fresh date on some of these debate points?"
(MSNBC's Chris Matthews, speaking about Howard Dean--4/9/03)

"If image is everything, how can the Democratic presidential hopefuls compete with a president fresh from a war victory?"
(CNN's Judy Woodruff, 5/5/03)

"It is amazing how thorough the victory in Iraq really was in the broadest context..... And the silence, I think, is that it's clear that nobody can do anything about it. There isn't anybody who can stop him. The Democrats can't oppose--cannot oppose him politically."
(Washington Post reporter Jeff Birnbaum-- Fox News Channel, 5/2/03)

Nagging the "Naysayers"

"Now that the war in Iraq is all but over, should the people in Hollywood who opposed the president admit they were wrong?"
(Fox News Channel's Alan Colmes, 4/25/03)

"I doubt that the journalists at the New York Times and NPR or at ABC or at CNN are going to ever admit just how wrong their negative pronouncements were over the past four weeks."
(MSNBC's Joe Scarborough, 4/9/03)

"I'm waiting to hear the words 'I was wrong' from some of the world's most elite journalists, politicians and Hollywood types.... I just wonder, who's going to be the first elitist to show the character to say: 'Hey, America, guess what? I was wrong'? Maybe the White House will get an apology, first, from the New York Times' Maureen Dowd. Now, Ms. Dowd mocked the morality of this war....

"Do you all remember Scott Ritter, you know, the former chief U.N. weapons inspector who played chief stooge for Saddam Hussein? Well, Mr. Ritter actually told a French radio network that -- quote, 'The United States is going to leave Baghdad with its tail between its legs, defeated.' Sorry, Scott. I think you've been chasing the wrong tail, again.

"Maybe disgraced commentators and politicians alike, like Daschle, Jimmy Carter, Dennis Kucinich, and all those others, will step forward tonight and show the content of their character by simply admitting what we know already: that their wartime predictions were arrogant, they were misguided and they were dead wrong. Maybe, just maybe, these self-anointed critics will learn from their mistakes. But I doubt it. After all, we don't call them 'elitists' for nothing."
(MSNBC's Joe Scarborough, 4/10/03)

"Over the next couple of weeks when we find the chemical weapons this guy was amassing, the fact that this war was attacked by the left and so the right was so vindicated, I think, really means that the left is going to have to hang its head for three or four more years."
(Fox News Channel's Dick Morris, 4/9/03)

"This has been a tough war for commentators on the American left. To hope for defeat meant cheering for Saddam Hussein. To hope for victory meant cheering for President Bush. The toppling of Mr. Hussein, or at least a statue of him, has made their arguments even harder to defend. Liberal writers for ideologically driven magazines like The Nation and for less overtly political ones like The New Yorker did not predict a defeat, but the terrible consequences many warned of have not happened. Now liberal commentators must address the victory at hand and confront an ascendant conservative juggernaut that asserts United States might can set the world right."
(New York Times reporter David Carr, 4/16/03)

"Well, the hot story of the week is victory.... The Tommy Franks-Don Rumsfeld battle plan, war plan, worked brilliantly, a three-week war with mercifully few American deaths or Iraqi civilian deaths.... There is a lot of work yet to do, but all the naysayers have been humiliated so far.... The final word on this is, hooray."
(Fox News Channel's Morton Kondracke, 4/12/03)

"Some journalists, in my judgment, just can't stand success, especially a few liberal columnists and newspapers and a few Arab reporters."
(CNN's Lou Dobbs, 4/14/03)

"Sean Penn is at it again. The Hollywood star takes out a full-page ad out in the New York Times bashing George Bush. Apparently he still hasn't figured out we won the war."
(MSNBC's Joe Scarborough, 5/30/03)

Cakewalk?

"This will be no war -- there will be a fairly brief and ruthless military intervention.... The president will give an order. [The attack] will be rapid, accurate and dazzling.... It will be greeted by the majority of the Iraqi people as an emancipation. And I say, bring it on."
(Christopher Hitchens, in a 1/28/03 debate-- cited in the Observer, 3/30/03)

"I will bet you the best dinner in the gaslight district of San Diego that military action will not last more than a week. Are you willing to take that wager?"
(Fox News Channel's Bill O'Reilly, 1/29/03)

"It won't take weeks. You know that, professor. Our military machine will crush Iraq in a matter of days and there's no question that it will."
(Fox News Channel's Bill O'Reilly, 2/10/03)

"There's no way. There's absolutely no way. They may bomb for a matter of weeks, try to soften them up as they did in Afghanistan. But once the United States and Britain unleash, it's maybe hours. They're going to fold like that."
(Fox News Channel's Bill O'Reilly, 2/10/03)

"He [Saddam Hussein] actually thought that he could stop us and win the debate worldwide. But he didn't--he didn't bargain on a two- or three week war. I actually thought it would be less than two weeks."
(NBC reporter Fred Francis, Chris Matthews Show, 4/13/03)

Weapons of Mass Destruction

NPR's Mara Liasson: Where there was a debate about whether or not Iraq had these weapons of mass destruction and whether we can find it...

Brit Hume: No, there wasn't. Nobody seriously argued that he didn't have them beforehand. Nobody.
(Fox News Channel, April 6, 2003)

"Speaking to the U.N. Security Council last week, Secretary of State Colin Powell made so strong a case that Iraqi dictator Saddam Hussein is in material breach of U.N. resolutions that only the duped, the dumb and the desperate could ignore it."
(Cal Thomas, syndicated column, 2/12/03)

"Saddam could decide to take Baghdad with him. One Arab intelligence officer interviewed by Newsweek spoke of 'the green mushroom' over Baghdad--the modern-day caliph bidding a grotesque bio-chem farewell to the land of the living alongside thousands of his subjects as well as his enemies. Saddam wants to be remembered. He has the means and the demonic imagination. It is up to U.S. armed forces to stop him before he can achieve notoriety for all time."
(Newsweek, 3/17/03)

"Chris, more than anything else, real vindication for the administration. One, credible evidence of weapons of mass destruction. Two, you know what? There were a lot of terrorists here, really bad guys. I saw them."
(MSNBC reporter Bob Arnot, 4/9/03)

"Even in the flush of triumph, doubts will be raised. Where are the supplies of germs and poison gas and plans for nukes to justify pre-emption? (Freed scientists will lead us to caches no inspectors could find.) What about remaining danger from Baathist torturers and war criminals forming pockets of resistance and plotting vengeance? (Their death wish is our command.)"
(New York Times' William Safire, 4/10/03)

CORRECTION

This advisory mistakenly included an out-of-context quote from William Raspberryï¿½s April 14, 2003 Washington Post column. FAIR's advisory inaccurately presented Raspberryï¿½s column as an example of overly optimistic pundit commentary about the invasion of Iraq. Contrary to FAIRï¿½s presentation, Raspberryï¿½s column called attention to and rejected the same sort of premature triumphalism and marginalization of critics that was the subject of FAIR's media advisory. FAIR should have presented the Raspberry column as an exceptional example of a media figure challenging the conventional wisdom early in the Iraq War.

FAIR sincerely regrets the error and offers an apology to William Raspberry and to our readers.

Also in the advisory, the Tony Snow item originally dated 4/27/03 has been corrected to 4/13/03.

You'd have to be on drugs to think this President has done anything right
for this country. Well, I take that back. Everytime he's away on vacation
he's doing us a big favor by not fucking things up more.

Outrageously boffo yocks that you should mention that.

XM has a $20 radio and a $20 portability accessory/battery deal, which
makes a completely portable system for $40. I ''tote'' it in a
backpack while riding my bike.

I like toast.

I think they need some lead pipe persuasion.

All life all holiness come from you O Lord
http://pwp.surfglobal.net/mjmiller/index.htm

"Mike Terry" <miketerry73@btinternet.com> wrote in message
news:4823ckFi3i9bU1@individual.net...
The Phonographic industry, the group representing record companies in the
UK, are to make it impossible for radio stations to stream audio outside the
UK. A clause in the PPL's new license for commercial UK broadcasters may
result in the shutdown of those stations' Internet streams to listeners
everywhere
else in the world beginning April 1.

Sounds like there needs to be a lobby group set up quickly!! Any volunteers?

Mike

"A Father's need for revenge fades."

By The Associated Press
Saturday, March 18, 2006

AL-ASAD, Iraq - In the desert chill, on the lonely nighttime roads of Iraq, Joe Johnson looks out over his machine gun and thinks of Justin.

It was on Easter morning 2004 that a chaplain and a colonel appeared on Joe and Jan Johnson's Georgia doorstep with the news. Justin, the boy Joe had fished and hunted with, the soldier son who'd gone off to Iraq a month earlier, was suddenly dead at 22, killed by a roadside bomb planted in a Baghdad slum.

Today it's Joe who mans the M-240 atop a Humvee, warily watching the sides of the road, an unlikely Army corporal at 48, a father who came here for revenge, a Christian missionary on a crusade against Islam, and a man who, after six months at war, is ready to go home.

"I shouldn't even have come," he now says. And if he leaves bloody Iraq with no blood on his hands, he says, that's fine, too.

The Johnson family story is unique, even strange. But in a war where soldiers have heard an ever-changing medley of reasons for fighting, Joe Johnson's may be as simple and direct as any -- and to many, as troubling.

He wasn't there that day the tragic news arrived in Rome, Ga. Instead, the self-employed house-builder was in Fort Lewis, Wash., trying to qualify for a place in a Washington National Guard unit ticketed for Iraq.

With six years of long-ago Army and Navy service, Johnson had joined the National Guard in 2003, wanting to serve his country again, this time in combat, and to go to Iraq while his son was there. A year with both husband and son at war would be easier on Jan than two years separately, he reasoned.

The death of Justin, a 1st Cavalry Division machine gunner, stunned his parents with a shock that lingers still.

"What were the odds, of thousands of people here, that somebody in my family would get killed?" the grieving father asked.

At that point, Johnson said, "I decided it was too soon to leave home." Jan was too distraught.

But last April 11, a year and a day after his son was killed, Johnson told his Iraq-bound Georgia National Guard unit, the 48th Infantry Brigade, that he was ready to join them. They ended up at this dustblown base in Iraq's far west, pulling escort duty for fuel convoys on the bomb-pocked desert highways from Jordan.

Why did he do it? The wiry, lean Georgian, an easy-talking man with a boyish, sunburned face, tried to answer the question that won't go away.

"It's a lot of things combined," he said. "One, a sense of duty. I was pissed off at the terrorists for 9/11 and other atrocities. Second, I'd only trained. I wanted combat." And then, he said, "there's some revenge involved. I'd be lying if I said there wasn't."

But there was more on the mind of this man who has done Church of God missionary work as far afield as Peru and the Arctic.

"I don't really have love for Muslim people," Johnson said. "I'm sure there are good Muslims. I try not to be racist." Although he hasn't read the Quran, or spoken with Muslims, he has "heard" the Islamic holy book "teaches to kill Jews and infidels. And it's hard to love people who hate you."

He could love Iraqi children, though, and said he'd hoped "to see them grow up to know right and wrong."

Somewhere along the way, however, the righteous passion cooled, as the overaged corporal, like tens of thousands of other American soldiers here, faced the reality of Iraq.

Was it last Christmas morning, when roadside bombs rocked his convoy one after another, and Johnson thought he was next? Or was it when speeding civilian cars passed the Americans' Humvees and Johnson failed to level his gun and open fire, which "I think anyone else," fearing car bombs, "would have done."

"I really don't want to kill innocent people," he now says. "I don't want to live with that the rest of my life."

Most of all, it might have been the telephone calls home to Jan, who was dealing not only with depression and other health problems, but also with the prospect that their elder soldier son, Josh, 26, might be sent to Iraq or Afghanistan.

"I don't like that Joe's there," Jan Johnson said when called by satellite telephone from al-Asad. "But it's something he felt he had to do. People heal in different ways. This is how he heals after Justin's death."

"She's ready for me to come home," Joe Johnson concludes.

He will. His battalion exits Iraq in early May, when Johnson's own enlistment term, coincidentally, expires. "That's it," he said, no re-enlistment for him.

But what about revenge?

"If I go home and didn't kill a terrorist, it's not going to ruin my life," he said. "Maybe I'd just as soon not. I don't know what it would do to my head."

Once back home among the northwest Georgia pines, he has one last ceremonial act in mind, removing the silver-toned bracelet he's worn on his right wrist throughout his deployment, bearing Justin's name and date of death. Joe Johnson's mission will have been accomplished.

Whatever it was, he said, "I got it out of my system."

I want a boatanchor.
I want a serious looking/feeling radio !
I want switches that click
I want a hand-sized tuning knob.
I want lamps that glow in a darkened room.
I want to squint at the frequency markings.

It's hard to be a serious listener
when the receiver isn't much bigger than a pocket novel.
There's no "heft"
What kind of audio do you get from a 2" speaker ?
No place to connect an extrnal antenna or ground.
If your bench is cluttered,
you may lose sight of the damn thing completey.
I don't want to play accordion with a dozen tiny (function) buttons.

I laud the advances in receiver technology.
I just wish they'd put the circuitry in a cabinet
that has some heft, and some decent (hand-sized) controls.

Maybe some enterprising company will come up with a "dock"
for the future postage-stamp sized receivers.

Until then, I find myself drooling over
the old HAMMARLUND pics on eBay.

Jeebus Christler! What a COLLECTION!!!

If I have such a collection of retro/vintage radios, I would at least put some of the rarest ones into more of a neater presentation of some sort, with more detail on the specs and history of each radio - but thats just me. (And now that I think about it, chances are, I most likely wouldn't even have the gear as oranganized as WA6MHZ has his.) - nevermind

I hear ya, cuhulin. And just incase you weren't sure, I was trying to make a joke. I have an off-the-wall sense of humor. I guess I better be careful next time. It seems like some of the readers here that aren't familiar with the regulars, might get the wrong idea.

Hehe. My mother's side is from around the Grenada area (Poplar Creek). I use to go deer hunting with my grandfather when I was young around Senatobia. Back then in the 80s, they used beagle hounds and CB radios to run 'em out. I remember it being a helluva good time. Not sure if that was legal though.

They prohibited ASCII over ten years after its creation, and with
countless sources of the ASCII code to choose from. The fact that
they knew the code (or could easily find it) didn't make any
difference to them. Like I said, they hardly ever prosecute anyway.

Source record: 67974

Antenna is up and working. Took me and daughter's boyfriend about 3 hours to build and install into attic. It ended up being almost 40 feet long with about 13" spreaders. This works out to be about 8mc. I think.

For the Balun I wound 4 turns for the coax end and 8 turns for the antenna end. I put them on a pair of Amidon FT114-67 cores I had.

Al = 5mH/1000t so 25nH/t
1.6uh for 8 turns
90 ohms at 9mc

oops, I think 3.2uH cause I stacked two cores. This works out to about 180 ohms at around 9mc. I suppose a few more turns would be ok since antanna impedance is 300 ohms. I think the rule of thumb is to keep transformer reactance a few times the circuit impedance. I'm not exactly sure how the number of turns effects the signal. For transmit I know I would use enough turns or stack lots of cores to keep magnetizing flux low to keep cores from overheating.

Anyway, TWISTED terminated folded dipole seems to be working nicely. It is quieter than my verticle or dipoles. Good call.

regards,
Bob

As you *still* don't get it, *you* appear to be the "clueless jackass".
So let me try one last attempt to explain it...

You say I have "a high number of off [sic] posts".

My news reader shows me that I have a *total* of approximately 146
posts on this NG, some off and some on topic. The other poster
(Whatever) clearly provided *proof* that *you* have 320 posts, virtually
ALL off topic.

Before you start slinging around accusations at others about "high
numbers" of OT posts, you may want to look in the mirror (and check
your calculator). Last time I looked, 320 is a bigger number than a
portion of 146.

Furthermore, your weak excuse/rationalization/justification for those
320 posts was because they were about "a contentious election". SO
WHAT??? OT is OT, contentious or not. Are you saying *YOU* are the only
one that can respond to contentious political posts and then whine and
chastise others for doing the EXACT SAME THING that you have done? And

do you think "contentious" is a justification for you alone? Have you considered, for example, that the war many post about may be "contentious" to them? Again, your stunning hypocrisy is shining brightly!

Others here have every right to exercise the same right to post that you did 320 times.

Sorry, but at this end of the circuit, you are *still* coming through loud and clear as a self-centered H-Y-P-O-C-R-I-T-E !

To summarize, if you think a portion of 146 is a larger number of OT posts than your 320 and if you think "contentious" is an OT justification reserved only for you alone, then *you* are truly the "clueless jackass"...

no it is not

It is not a crime to point that a persons death would have a certain
result

Indeed I will freely state that the dshould the death of GW Bush occur
wether by Natural causes or by assigation there would be a profond
efect on our conduct of the war in Iraq

likewise your death (and for that matter Dx Ace's as well) by whatever
means would improve the tone here in the NG, that is not making a
threat it is pointing out a fact. In my original post I also pointed
out that killing you would be ilegal.

Indeed since i have made what you are fool enough to call a terist
threats and still I am not arrested tends ot refute your assertion that
this is fasists state (the steengh of that line of reasoning wil
improve as I contiue to post without being arrested

OTOH that you feel threatened by the simple and true statemet that the
NG would be beeter off if you happened to die is claer signs that you

are paranoid.

go get help for mental Illness or take your cool aids or for that
matter pelase order take out from Dr K

Cuhulin,

Yes - If you have the enough Land and a few Tall Trees a
simple Wire Antenna will Do All That Needs To Be Done
-for- a Shortwave Listener's (SWL) "Receive Only" Antenna.

GO VERTICAL :
A basic 75 Meter Band Shortwave Listener Vertical Antenna
- One 59.2 Feet High {long} Single Wire
- Six (6) 30 (29.6) Feet long evenly spaced Ground Radials
- 100 Foot of Coax Cable Feed-in-Line
- At least 60 Feet away from the House / Radio Shack
- Optional 12:1 Matching Transformer {UnUn}

GO HORIZONTAL :
A simple 60 Meter Band Shortwave Listener Dipole Antenna
- Two 47.7 Feet long Single Wire 1/4 WL Arms for a
- Tip-to-Tip Length of 95.4 Feet 1/2 WL that is
- Mounted at 47.7 Feet High 1/4 WL
- 100 Foot of Coax Cable Feed-in-Line
- At least 50 Feet away from the House / Radio Shack
- Optional 4:1 Matching Transformer {Balun}
- - Add a Second-Set of Dipole Arms set-at 30 Degrees
from the Horizontal-Arms for the 41 Meter Shortwave Band
- - Two 31.8 Feet long Single Wire Arms for a
- - Tip-to-Tip Length of 63.6 Feet
- - - Add a Third-Set of Dipole Arms set-at 45 Degrees
from the Horizontal-Arms for the 25 Meter Shortwave Band
- - - Two 19.7 Feet long Single Wire Arms for a
- - - Tip-to-Tip Length of 39.4 Feet

DOING BOTH - VERTICAL AND HORIZONTAL :
Generally better for the Shortwave Listener (SWL)
then the above two basic and simple Antennas :
Is the Inverted "L" Antenna that can provide the
Omni-Directional pattern need for All-a-Round
and All Bands Reception desired by a Shortwave
Listener (SWL) in One Antenna - When One SWL
Antenna is the Only Antenna that you are allowed
to have for your Shortwave Listening.

BIGGER - Low Noise 120 by 75 Meter Band
Shortwave Listener (SWL) Inverted "L" Antenna
- 120m 1/4 WL Horizontal Top-Arm Section 97.5 Feet long

- 75m 1/4 WL Vertical Up-Leg Section 59.2 Feet long
- Total Length 156..6 Feet long
- 150 Foot of Coax Cable Feed-in-Line
- At least 100 Feet away from the House / Radio Shack
- Required 9:1 Matching Transformer {UnUn}
- Remotely located Ground Rod at the Base
of the Vertical Up-Leg Section.

BIG - Low Noise 90 by 60 Meter Band
Shortwave Listener (SWL) Inverted "L" Antenna
- 90m 1/4 WL Horizontal Top-Arm Section 70.9 Feet long
- 60m 1/4 WL Vertical Up-Leg Section 47.7 Feet long
- Total Length 118.6 Feet long
- 125 Foot of Coax Cable Feed-in-Line
- At least 100 Feet away from the House / Radio Shack
- Required 9:1 Matching Transformer {UnUn}
- Remotely located Ground Rod at the Base
of the Vertical Up-Leg Section.

NOT SO BIG - Low Noise 75 by 49 Meter Band
Shortwave Listener (SWL) Inverted "L" Antenna
- 75m 1/4 WL Horizontal Top-Arm Section 59.2 Feet long
- 49m 1/4 WL Vertical Up-Leg Section 38.5 Feet long
- Total Length 97.7 Feet long
- 100 Foot of Coax Cable Feed-in-Line
- At least 75 Feet away from the House / Radio Shack
- Required 9:1 Matching Transformer {UnUn}
- Remotely located Ground Rod at the Base
of the Vertical Up-Leg Section.

TIP - Design and Lay-Out this Shortwave Listener
(SWL) Inverted "L" Antenna with the Feed-Point :
* Remotely Located Ground Rod
* Matching Transformer
* Vertical-Up-Leg
All at the Far-End of the Antenna with the
Horizontal-Out(Back)-Arm's End-Tip closest
to the House - But still at least 15-25 Feet Away.
Plus run/route the Coax Cable Feed-in-Line
directly under the Wire Antenna Element's
Horizontal-Arm : Either On-the-Ground or
Buried-Under-the-Ground.

well that is my $2.22 worth of land-and-trees
and all the Wire you can hang - iane ~ RHF

2474. Three Band : 49 & 31 & 22 Meter Bands Shortwave Listener (SWL) Tri-Band Dipole {Wire} Antenna On-the-Fence

Newsgroup: rec.radio.shortwave
Date: 2006-03-19 11:13:22 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1142766802.058718.144010@i39g2000cwa.googlegroups.com>
Source record: 67915

For One and All,

Three Band : 49 & 31 & 22 Meter Bands Shortwave Listener
(SWL) Tri-Band Dipole {Wire} Antenna On-the-Fence

Top Dipole Antenna for the 31 Meter Band
- Height above ground On-the-Fence = 5-Feet
- Two 24.5 Feet long Single Wire Arms = 1/4 WL
- Tip-to-Tip Length of 49.0 Feet = 1/2 WL
- First 34 Inches for the Wire Antenna Elements
(Dipole Arms) Sloping Up at 45 Degrees from the
Matching Transformer (Balun) and then Flat.

Center {Middle} Dipole Antenna for the 49 Meter Band
- Height above ground On-the-Fence = 3-Feet
- Two 38.5 Feet long Single Wire Arms = 1/4 WL
- Tip-to-Tip Length of 77.0 Feet = 1/2 WL
- Mounting-Point for the Matching Transformer (Balun).
- Wire Antenna Elements (Dipole Arms) are Rigged Flat.

Bottom Dipole Antenna for the 22 Meter Band
- Height above ground On-the-Fence = 1-Feet
- Two 17.1 Feet long Single Wire Arms = 1/4 WL
- Tip-to-Tip Length of 34.20 Feet = 1/2 WL
- First 34 Inches for the Wire Antenna Elements
(Dipole Arms) Sloping Down at 45 Degrees from
the Matching Transformer (Balun) and then Flat.

* Requires a 4:1 Matching Transformer {Balun}

* Ground Rod located in the ground
at the Center-Point of the Dipole

* 25-75 Foot of Coax Cable Feed-in-Line

* Mount on a Fence that is at least 10 Feet
away from the House / Radio Shack.

* Use # 14 AWG Insulated Stranded Copper Wire for
the Wire Antenna Elements of all three Dipole Antennas.

TIP - For a "Receive Only" Shortwave Listener (SWL)
Antenna - Simply Staple the Wire in-place On-the-Fence.
-Or- Use Screw-In TV type Stand-Offs.

Remember with All Wire Antennas :
More Wire 'is' More Wire and nothing else is assured.

2475. Ferrite Bead Usage On Receive-Only Antenna

Newsgroup: rec.radio.shortwave
Date: 2006-03-19 12:52:07 UTC
From: Robert11 <rgsros@notme.com>
Message-ID: <wvednWq7h4przoDZnZ2dnUVZ_tGdnZ2d@comcast.com>
Source record: 67916

Hello:

Will be putting up an outside antenna, with a coax run-in to the upstairs of my
house where the receiver is.

Antenna is for receive-only.

This receive antenna's coax unfortunately, here and there, will be in close proximity to the coax cable
Comcast runs to my PC modem. Really hard to avoid some close proximity of the
two, in spots.

It has been suggested that I buy some of those R/S ferrite snap over "beads"
to minimize any pickup of the receive only antenna from the Comcast cable.

Questions:

a. Do I want to place them on both cables, or just Comcast's ? Why ?
How many and where ?

b. Should they effect my normal received signal (30 MHz on down to
broadcast bands) in any way ?

Thanks,
B.

2476. (OT) TRUE!

Written by an Australian Dentist...
To Kill an American

You probably missed it in the rush of news last week, but there was actually a report that someone in Pakistan had published in a newspaper an offer of a reward to anyone who killed an American, any American.

So an Australian dentist wrote an editorial the following day to let everyone know what an American is, so they would know when they found one. (Good one, mate!!!!)

"An American is English, or French, or Italian, Irish, German, Spanish, Polish, Russian or Greek. An American may also be Canadian, Mexican, African, Indian, Chinese, Japanese, Korean, Australian, Iranian, Asian, or Arab, or Pakistani or Afghan.

An American may also be a Comanche, Cherokee, Osage, Blackfoot, Navaho, Apache, Seminole or one of the many other tribes known as native Americans.

An American is Christian, or he could be Jewish, or Buddhist, or Muslim. In fact, there are more Muslims in America than in Afghanistan. The only difference is that in America they are free to worship as each of them chooses.

An American is also free to believe in no religion. For that he will answer only to God, not to the government, or to armed thugs claiming to speak for the government and for God.

An American lives in the most prosperous land in the history of the world. The root of that prosperity can be found in the Declaration of Independence, which recognizes the God given right of each person to the pursuit of happiness.

An American is generous. Americans have helped out just about
every other nation in the world in their time of need, never asking a
thing
in return.

When Afghanistan was over-run by the Soviet army 20 years ago,
Americans came with arms and supplies to enable the people to win back
their
country!

As of the morning of September 11, Americans had given more
than
any other nation to the poor in Afghanistan. Americans welcome the best
of
everything...the best products, the best books, the best music, the best
food, the best services. But they also welcome the least.

The national symbol of America, The Statue of Liberty,
welcomes
your tired and your poor, the wretched refuse of your teeming shores,
the
homeless, tempest tossed. These in fact are the people who built
America.

Some of them were working in the Twin Towers the morning of
September 11, 2001 earning a better life for their families. It's been
told
that the World Trade Center victims were from at least 30 different
countries, cultures, and first languages, including those that aided and
abetted the terrorists.

So you can try to kill an American if you must. Hitler did.
So
did General Tojo, and Stalin, and Mao Tse-Tung, and other blood-thirsty
tyrants in the world. But, in doing so you would just be killing
yourself.
Because Americans are not a particular people from a particular place.
They
are the embodiment of the human spirit of freedom. Everyone who holds to
that spirit, everywhere, is an American.

Please keep this going!
Pass this around the World ?
then pass it around again.
It says it all, for all of us

The Cable Company usually uses very high-quality line for the data
drop. Unles you can hear noise sent back up the shield from the
"modem'' I wouldn't worry about it. You should use Quad Shielded RG-6
as well, if it's really bothering you.

For a dipole skip the 4:1 balun - go straight to the coax or use a 1:1
unun. If you were building a folded dipole the 4:1 balun would be
more appropriate. You can ground or not ground the dipole; it is a
balanced antenna so grounding is a matter of lightning protection &
providing a path for the static electricity to drain - a better path
than draining to the radio. I guess the dipole that's 1 foot above
the ground is for 'ground wave' reception 8-}

2481. Re: BBC Programs Heard on DC-area FM stations.

Newsgroup: rec.radio.shortwave

Here in Dallas, KERA (90.1 FM) carries the BBC feed from local midnight until morning when "All Things Considered" comes on.

Even if the "Beeb" has a somewhat liberal slant, its much better listening than Art Bell's show, which seems to be carried by nearly every AM station in the country trying to find something to drive its tubes with during the middle of the night.

Paul

> blog.

While this report's name is far from original, the theme of this report is appropriate because it really is all about "taking action".

As the owner of my own small network of radio licences (more about this later), I'm motivated to write this report from "a manager's perspective".

Authors Sam Deep and Lyle Sussman give us their spin on what the "act" in the word "active" means:

A - Analyse your situation
C - Choose the best strategy and then
T - Track your choice

[1]

Something that underpins a capacity to furfill the requirements of "the ACT process" described above is to have ready-made, an "information system".

Currently in Tafe Studies, I'm learning about "Marketing Information Systems", which underpin a capacity to conduct a marketing research process - the "relationship between information and decision-making" in marketing.

In the context of radio broadcasting, setting up an "Information System" is likely to assist a radio station in the furfillment of production, sales and marketing functions.

The type of information gathered will impact on the quality of the decisions made - effectively, how "active" a radio station is in achieving objectives.

Decisions based on information that's gathered and conveyed in an "Information System" will range from the strategic (eg: directing a format) to the tactical (having a street promotions crew).

As my 2006 marketing text explains:

>>> No matter what the nature of the decision (to take *action*), managers require information to maximise the probabilty that their decsions are the right decisions <<<

[2]

In order to gather together the required information for building my own radio station "information system", this series will first examine the biggest radio broadcasting market in the world - The United States of America.

This early segment of this blog will be called radio*active*USA.

A trip through several North American markets is how this report will take first steps in the process of getting a radio station to be radio*active*.

More as the week progresses.

It was easier for Stevie-baby to crawl up his own, since he has laughed
it off. It was just laying there in the warm pile of his own poop.

That also explains why all that excrement emanates from his mouth
instead of the other orifice.

I just picked this cable TV test set which is a Sweep Spectrum Analyzer and
I think it and the RF sweep gen go up to 300 MHz. It still kind of works
but has several capacitors disconnected on some of the boards. I've
Googled, Dogpiled and Vivisimoed and can't find any info. I'd like to find
a manual/schematic, specs, ops manual or whatever and hope someone out there
has a copy I can buy.
tnx

If I tune to 1500 WTOP here in the DC area (Yeah, I know, it's not gonna be WTOP for much longer!) when I'm centered on 1500kHz with say a 8 kHz filter it sounds fine. But if I go up and down by 10 or 15kHz there is a very steady, rather strong (only a S-unit or two down) "whoosh" that is always going on.

I hear similar whooshing on both sides of 980AM (WTEM, Washington DC sports radio) too. A quick tune up and down the BC AM band does not turn up anything else strong and similar sounding (not saying there's nothing else there, just nothing else as obvious as those two).

Radio is a R-390A if it matters any. I'm pretty sure the bandwidth is 30kHz because as I cut narrower filters in I still hear the swishing 15kHz away from center.

Whooshing sounds not too different than DRM (Digital Radio Mondale) on shortwave, but of course DRM signals do not have a voice carrier in the middle of the channel nor do they splatter all over a solid 30kHz.

Is this "IBOC"? Is it really supposed to be this wide in bandwidth?

Tim.

Yes. IBOC (In Band On Channel) is really IBAC (In Band Adjacent
Channel[s]).

Yes, Nigeria is one of the last good catches
from Africa on SW -- still direct, no relays.
Africa is one of the last places we can still
hear these domestic outlets as, one by one,
they have gone off the air -- I remember the
good old days trying to hear and verify each
of the regional SW transmitters in Nigeria, as
well as some separate non-NBC regionals.

Check to see that it is shut off dusk to dawn. As soon as they don't
turn off the IBOC, complain to the FCC and also complain to the
stations that are being whacked by IBOC.

Another interesting fact, you get less adjacent channel crap if you
listen to the sideband of the adjacent channel that's closest to the
offending station's frequency

eg., WCOL 1230 (Clear Channel IBOC) puts out less crap on the LSB of
1240 than on the USB of 1240, in case you want to hear WHIZ 1240 through
the mess.

Actually, IBOC can run minimal hours of 6 Am to 6 PM even if sunset and
sunrise times makes the day shorter.

Space Weather News for March 19, 2006

http://spaceweather.com

WEEKEND AURORAS: A solar wind stream hit Earth on March 18th, sparking a geomagnetic storm and auroras over northern US states such as Wisconsin, Minnesota and Michigan. It's no coincidence that auroras are showing up now--on the eve of Northern Spring. History shows that weeks around the equinoxes are often good times to catch Northern Lights. Visit http://spaceweather.com for more information and pictures of this weekend's auroras.

Glad to see that posted. That's sure the way I read the announcement on the website, but I've heard many people (including engineers at stations that run IBOC) claim it's strictly sunrise to sunset.

The only AM HD station in this market runs it sunrise to sunset - however, they're DA-N and I suspect the HD is turned on & off by the same system that handles the pattern change. (I might imagine this is practice at many HD AM stations?)

2520. Upcoming Pirate Radio-The Crystal Ship

Newsgroup: rec.radio.shortwave
Date: 2006-03-19 22:55:47 UTC
From: dxAce <dxAce@milestones.com>
Message-ID: <441DE173.426EE5F7@milestones.com>
Source record: 67810

I just received this from the op of The Crystal Ship:

Happy Sunday, Pirate Radio Addicts!

Tighten the belt on your arm, and run that coax into it, 'cuz The Crystal Ship is ready to mainline you!

(DISCLAIMER: We do not advocate drug use... unless, well, you have nothing better to do. Well, ok, we don't 'advocate' it... you do what you want...)

We are going on the air on 6,875 kHz, starting about 2300 utc (yeah, a bit late) ending before WWRB (or whomever) comes on at 0000. Around 0000 or shortly thereafter, after checking general loggings on the frn.net/vines/, we may probably tune up on about 4,070 kHz.

Opening music will be a set by Blue Oyster Cult, one of our bands of choice from the early 80s.

Cheers!

Dear Barry,

When I bought my first C. Crane FM Transmitter I had the same problem you do. A call to a technician at C. Crane "fixed" the problem. The range is adjustable. The "label" on the back is actually a "door" to the inner workings. If you "peel" it off, you will see the adjustment screw. Turn it all the way (to the right, as I remember) and you'll be amazed at the range. I don't remember all the particulars as this was several years ago. I have purchased a couple of new ones recently and the range was at maximum on receipt.

Hope this helps.

Best,

Joe

Methinks the BBC is not party to the agreement you are referring to. They
are unaffected, I hope.

2534. Re: Three Band : 49 & 31 & 22 Meter Bands Shortwave Listener (SWL) Tri-Band Dipole {Wire} Antenna On-the-Fence

Newsgroup: rec.radio.shortwave
Date: 2006-03-20 03:01:25 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1142823685.325523.147560@u72g2000cwu.googlegroups.com>
Source record: 67824

How...,

1. For a dipole skip the 4:1 balun - go straight to the coax
-R- Good advise for a Ham using the Dipole for a Specific
Amateur Radio Meter Band - But for a Shortwave Listener
(SWL) who is trying to use the Dipole as a general Antenna
for All-SWL-Band reception the 4:1 Balun gives them more
Listening-ability-across-the-Bands.
REMEMBER - This is a Three Band : 49 & 31 & 22 Meter
Bands Shortwave Listener (SWL) "Receive Only" Tri-Band
Dipole {Wire} Antenna built on a On-the-Fence

2. or use a 1:1 unun.
-R- An UnUn with a Dipole ?
- - - Dipole to Twin Lead / Ladder Line = Bal>Bal
- - - Dipole to Coax Cable = Bal>Un

3. If you were building a folded dipole the 4:1 balun
would be more appropriate.
-R- Again this is a Three Band : 49 & 31 & 22 Meter
Bands Shortwave Listener (SWL) "Receive Only"
Tri-Band Dipole {Wire} Antenna built on a On-the-Fence
The object of the 4:1 Balun is to intergrate the Signals
developed by the Three Dipole Antenna Elements into
the Single Coax Cable Feed-in-Line and provide better
Across-the-Shortwave-Bands frequency coverage.

4. You can ground or not ground the dipole;
it is a balanced antenna so grounding is a
matter of lightning protection & providing a
path for the static electricity to drain
- a better path than draining to the radio.
-R- Lightning Protection and a Static Electricity
'drain' Path are always two good things to achieve
with any Shortwave Listener's (SWL) Antenna.

5. I guess the dipole that's 1 foot above the
ground is for 'ground wave' reception 8-}
-R- Wave Goodbye "How..."

FWIW - A Dipole On-the-Fence would not be my first
choice as a Shortwave Listener's (SWL) Antenna.
But what can you do - If the ONLY place that you can
build an Antenna is On-the-Fence ? ? ? and you don't
have the Money for a Wellbrook Loop Antenna ? ? ?

Plus someone has convinced you that the ONLY
Antenna that is worth having is a Dipole - because it
is a complete Antenna that does not require a ground
to work. - - - So now all you know is that you have to
build a Dipole Antenna and it's got to fit On-the-Fence [.]

right now i am beginning to feel a little di-pole-er - iane ~ RHF

Source record: 67827

Robert11,

Start with Good Grounding in your Radio Shack and
at the Shortwave Antenna.

Per David's suggestion use good quality Coax Cable
an consider using RG6 (RG-6) Quad-Shield Coax Cable.

First - Check All the Cable TV's Coax Connections
and re-secure them if needed.

Second - Rig and Run/Route your Coax Cable along side
the Cable TV Coax and see if you have any problems.
- - - If there are no Detectable Problems then Secure
your Coax Cable and "Feel Lucky" :o)

Third - Try the Snap-On Ferrite Beads at the Ends
of your Coax Cable.

Worst-Case - Consider installing cut-to-length pieces
of Hard Metal {Iron-Steel} Conduit where the two Coaxs
run along side of each other and Ground the Conduit;
and then Run the Radio's Coax Cable inside the Conduit.
- - - As an Alternative use the Outer Metal Covering
of "BX" Flexible Conduit and Run the Radio's inside
the Conduit; also Ground the Metal "BX" Outer Cover.

hope this helps - iane ~ RHF

I was under the impression that most commercial transmitters used tubes.
I don't think a couple of 2n2222 transistors could handle a 50 KW output.

>Bands Shortwave Listener (SWL) "Receive Only" Tri-Band
>Dipole {Wire} Antenna built on a On-the-Fence
I believe you are mis-applying the balun. A dipole has an inherent
impedance of around 70 ohms - if using 50 ohm coax you could use a
1.5:1 or call it close enough and use a 1:1 balun (which I previously
mis-stated as an unun) - or just go direct to the coax. As to giving
'more listenability' on other bands, well that's probably about as
debated as the 9:1 balun with end-fed wires & inverted L antennas.
One thing the balun does do is provide isolation between the antenna
and feedline and this 'decoupling' can make for a quiter antenna
system.

>2. or use a 1:1 unun.
>-R- An UnUn with a Dipole ?
>- - - Dipole to Twin Lead / Ladder Line = Bal>Bal
>- - - Dipole to Coax Cable = Bal>Un
OOPS! My faux pas, should read 1:1 balun for Dipole to 75 ohm coax
cable, 1.5:1 balun for Dipole to 50 ohm coax cable. Dipole to
twinlead could be direct or use a 1:1 isolation transformer.

>3. If you were building a folded dipole the 4:1 balun
>would be more appropriate.
>-R- Again this is a Three Band : 49 & 31 & 22 Meter

>developed by the Three Dipole Antenna Elements into
>the Single Coax Cable Feed-in-Line and provide better
>Across-the-Shortwave-Bands frequency coverage.
The balun will not necessarily 'integrate the signals', in other than
a 1:1 configuration it transforms impedance and allows you to go from
balanced to unbalanced line. At some frequencies it may 'smooth out'

the impedance mismatch, however if you want to combine the signals a
triplexer would do the trick.

>4. You can ground or not ground the dipole;

>right now i am beginning to feel a little di-pole-er - iane ~ RHF
> .
RHF - Granted, a fence mounted antenna is the best some folks can do;
there are other options to the dipole such as an end-fed or a
fence-loop; the former requiring a ground the latter not. Might I
suggest to you the ARRL Antenna Book (not the end-all to antenna
knowledge but a good start; it has a section on coupling the antenna
to the feedline. They explain what I was trying to say in my original
response to you in a better fashion than I can. They even describe a
1:1 balun which is what I mis-stated as an unun. Though you (and many
participants here) are mainly interested in receive-only antennas; the
principles apply equally to antennas used for transmit and receive.
If you don't have a current copy of this ARRL publication see if you
can get your hands on a used one - the physics haven't changed from
year to year. What you have described will work, no doubt about it -
but wouldn't you like to explore ways to make things work better?

Well the trend "looked" like it was settling down but not any more. The
wind speed has not only picked up again it is also more negative so we
are still in a geomagnetic storm condition. Kp is at 5.

At this hour? At home in bed, I presume.

> and why do you violatethe Tos of Google

So far, I haven't. Why do you suggest I do?

You see, Mork, I can call you an idiot, a fool, a liar, a deviate,
a coward, and a cheat in this forum because at one time or another
you've proven all of them to be true.

It's not a "violation" if it's true.

Steve, K4YZ

1149 UTC March 20, 2006
I'm getting a great signal on 6020, with music, weather, updates on the storm
and an ID saying "ABC Local Radio Queensland".
Is this a relay via Radio Australia?

I believe it's via Radio Australia transmitters. Not confirmed though.

Not necessarily a pirate. Some old receivers (tubes, especially) leak
back through the mixer and up the antenna. Twice the 10.7 mHz IF,
plus the ca. 100 mHz FM broadcast frequency yields an IM product right
in the middle of the Aero Band.

If you really want one and want to check it out before
you buy, go to Dayton. There's enough there to
choose from, and it's only limited by your wallet
and your back. (Lugging a Hallicrafters SX-100
from the flea market to the bus to the car was an
adventure, and I bow before anyone who can do
that with a SP-600 or HQ-180.)

Other than the obvious April Fool's reference,
the fun part would be that the argument of
streaming internet broadcasting to more people
than shortwave would become moot.

2567. Know your listener/market

Newsgroup: rec.radio.shortwave
Date: 2006-03-20 15:02:17 UTC
From: "Eric F. Richards" <efricha@dim.com>
Message-ID: <7jct12hlojgaffgp9gg3l7nhr3hl0ijrvh@4ax.com>
Source record: 67857

...so I spent some time here arguing with a rock, er, an, um, "radio consultant," who is convinced that by the flawed methodology used by his clients and the ratings service that all radio listening is local, and he uses those same flawed methodologies to show that his stations are now number 1.

The phrase that is important here is "flawed methodology."

I was listing to American Public Media's "Marketplace" last Friday and they had a piece on AmEx's new "clear" AmEx, that they tested in Boston (and are advertising in Boston only, but is available anywhere) using a "survey," with questions like:

o Would you like more clarity in your finances?

o What is a bigger source of stress in your life?
a) personal relationships b) money and finance

They found the survey laughable. So they went out and asked the exact same survey questions with one more: "Would you want to get a credit card that would help clear up your finances?" People, of course, said, no, the last thing they need is another credit card.

AmEx, of course, said that was the wrong question to ask.

...and so it goes with radio. As long as the methodology is skewed to deliver the wanted results, it is as meaningless as AmEx's absurd "market research."

So they will go on, with IBOC and so-called "HD" radio with all its artifacts and dropouts, to the detriment of people who actually listen.

Yes, they will. Why? Two reasons....one is that Powell's FCC
mandated that any future modulation schemes for broadcast must be
digital. But the other is that there's believed to be money in it.

And, again, in the US Radio is ALWAYS about the money.

It may surprise you to know that I agree with you about a lot of
research. Most political polls are constructed to produce a desired
result in precisely the same way as the survey you describe. And I've

been involved with stations that conducted surveys that asked highly constructed questions that gave the GM precisely the answer he wanted. While some rather extensive naive listening, produced dramatically different results. Care to guess how long those GM's last?

But the issue, and this is true of most marketing, but especially Broadcast, is a matter of cost effectiveness. Why do more work when less will produce the same profit?

Simple example. When Wapner was on The People's Court, and the program popularity was at it's zenith, the syndicator announced that production of new programs would cease, and that all future programs distributed would be reruns. You should have heard the screaming in my neighborhood when THAT one went public. It got picked up by the local broadcasting columnists in the papers and some questions got asked. The matter was explained by the syndicators: They had enough shows in the can to keep the program running for several more years. Why spend the money to produce more shows, when the shows already on the shelf would produce the same revenue/profit? Of course there were those like you and me who said things like "To serve the fans?"

Truth is that the syndicator didn't care. He wasn't in the caring business. He was in the business to make money for himself, his company and his stockholders. Cutting expenses to maximize profits is only smart business. And the show, like any show on TV would eventually burn out, anyway. Any run of more than 4 years is profitable. Anything more than that is gravy, but gravy with diminishing returns over time, as distribution costs begin to become a significant fraction of revenue when the program goes into decline.

Cost/Benefits, Eric. It's all about cost/benefits. And when there can be revenue generated, without costly methodology, the simpler methodology will win every time.

It's not about monster signals, anymore. And beyond the 40's it never really was. There was a certain cache in having a monster signal, but that was more to dispirit the competition's staff, and do a little chest puffing. But as far as a practical business strategy...monster signals beyond the local contours were a waste of energy. No matter who was listening. Because there was no cost effective (and the key phrase is "Cost Effective") way of measuring them and making them meaningful to the sales department. In fact, I've worked for stations that voluntarily reduced power and reshaped their directional array because the extra reach was a waste of power. The pennies saved on electricity were more important and more visible on the books than the extra listeners beyond the fringe.

The truth is, that the image of public service, huge reach and super service to the wider area presented by stations in the 60's and 70's like WLS, WABC, CKLW, KAAY, KNX, WLW and others were more show biz than substance. In fact, in the late 70's and early 80's when WLS was snapping up teenagers in ST Louis, it could barely crack the top 10 in

Chicago where it's revenue base was located. Changes in staff, format and target resulted. Monster signal, and perceived monster reach, but revenue producing listenership was off. King Kong was finally revealed to be 3' 6". But the truth is, he always was. WLS, in Chicago, was just another big signal. And it enjoyed a huge local share for a time. Huge. But it was still a local station. That you could hear it from the Rockies to Bermuda was only show biz. King Kong was still only 3' 6".

The public service commitment for Radio has been mostly lip service for years, anyway. There simply is no profit in it. Hell, I worked for one GM who SOLD PSA's. Nobody buys, none air. He had lawyers on speed dial to protect his license. But he never actually did meet his commitments. He was certainly not alone.

In the late 70's Jesus was kicked off the air at many stations. Church services broadcast for decades disappeared in a stroke, to make room for profit producing syndicated programming. Good for business, but it orphaned smalls groups of loyal listeners for stations nationwide. Ultimately a large population of listeners if taken as a class, but a trivial number on the local stations Sales pitch. No station failed because of them. It's always about the money. And it's always about Sales. And all stations are bought for their local reach.

David and I have gotten into some pretty tense disagreements over the state and nature of Radio. But his business is not in creating King Kong stations of catholic interest and reach, his business is in turning stations into more of a Mighty Joe Young. Still a lot of strength, but strength where the money is. And that's locally. Without the wasted effort into so called national reach. Why? Because he can make more money for his stations by keeping the effort local. Where the advertisers buy.

David touched on this but there wasn't a lot of amplification on it. This is the crux of the matter: Advertisers call the shots. They always have. Everywhere. Since the first broadcast station hit the air in the US. The Advertiser calls the shots. Because without the advertiser, stations do not survive. And if you think Public Radio is devoid of advertiser pressures, guess again. Corporate underwriting is the backbone of Public Radio, and corporate underwriters provide more funding than public donations. Make no mistake, when a corporate sponsor doesn't like a program....public or commercial radio...it is made clear that revenue is threatened. And this has been the case since the birth of the business.

Murrow wept openly in the hallowed halls of CBS when Chairman Paley killed a story Murrow had been working on for months, bowing to advertiser pressures. W.C. Fields sponsored by Lucky Strike make frequent on-air references to his nephew 'Chester' to the horror and eventual withdrawal of Lucky Strike. Fields often enraged sponsors. Don't think there weren't heated conversations about his content.

Advertisers were responsible for the abrupt cancellation of a consumer advocacy program on KRMD some years ago. In the middle of the broadcast, Gene Dickerson walked into the control room and pulled the talent out of the chair by his shirt collar under direct pressure from an offended advertiser.

NPR, locally, has also killed or modified stories to protect funding.

And there are tens of thousands of such stories every year.

Should it happen? No. I don't think so. And there's a lot of evidence to suggest that in many cases, the impact to advertisers' sales by the offending content are, at best, minimal. But most GM's, most Chairmen, most Sales ducks don't have the backbone to stand up to advertisers writing checks that keep them in their lifestyles. So advertisers rule. And they always have. In fact, the purpose of programming in the US has always been to hold the attention of listeners between commercials. An old joke, but it's always been true.

Radio in the US has always been about the money. Early stations in rural areas began as ham stations owned by grain elevator operators. The owners used to report grain prices to the farmers, a commercial interest. When the grain elevator up the road also became radio equipped, they began simple programming to fill the gaps between price reports. This is how WDZ, Tuscola (later Decatur) began. It's how WLS began. Live programming to fill time between commercial messages.

The commerical content ALWAYS being the more important issue.

And over time, the commercial content evolved, and rules regarding it evolved, but it's importance and it's position in the scheme of things has not diminished, but only gotten stronger.

So the methodology, whether it's flawed or not (and that can be debated until the Second Coming), is the reality by which advertisers live and die in broadcast media. They like the methodology. It's simple, it's easily digested, and it produces hundreds of millions of dollars a year in Sales. It's not going to change, until the revenue stream is threatened by the external forces on the market. Advertisers call the shots. They always have, and they always will. This is the way they like it. It is what it is. And despite what you hear, have heard, or will hear on the radio, King Kong is still only 3' 6". And so he will remain, because the people with the money don't care to spend a dime to see him larger.

David is in the business of keeping radio profitable for his clients. He does this by showing his clients how to meet the needs of advertisers. Advertisers who call all the shots. Sometimes you can get control of an advertiser to do something that's more service oriented. And for me, that's what keeps me even allied with Broadcast. It's worth the effort and the heartache for that payoff. But, in the main....it's just about doing what advertisers want. And the bulk of them do NOT care about anything but what they see in the books. And the books were created to meet their needs.

I don't like it. Anymore than you do. But it is what it is.

Unless you can get the advertisers to see a need for change, either by convincing them, or through a market induced threat to revenue, it's not going to change. Certainly not revert to the kind of Radio that you and I enjoyed so many years ago.

Radio was in its adolescence, then. Still learning its way. It's not now. Today, Radio is a mature product and to survive, it must concentrate its efforts on to keep it's revenue stream intact. That's the one thing that's never changed, over the years.

It is, and always has been about the money.

Nobody makes a 50kw transistor, but 200 250-watt transistors in
push-pull-parallel will do the trick. Solid-state 50kw transmitters are
by no means unusual. They're also a lot more reliable than tube rigs.

We have a solid-state 6kw digital TV transmitter at work. It's amusing
to pull out two or three power amp modules and see *absolutely nothing*
happen -- the power meter doesn't even drop -- all that happens is you
get an alarm on the control panel warning of the missing modules...

Not any more, they've gone back to "Uluru", the aboriginal name.

Anyway, they've dedicated 6020 kHz to ABC Radio Local with cyclone area coverage. And they no longer shift from 6020 to 5995 at 14:00 UTC. Another frequency of 11650 was given on the broadcast, to be used when they shifted from 6020, (I forgot the timing of that). Heard March 19 around 13:00 UTC. Same frequency usage heard on March 20 14:00 UTC.

Yes, it's IBOC. It is that wide.

IBOC can be seen as yet another sign of the End Times. It's in the Bible,
under the broader defination of the term "pestilence". Specific information
of who is using the Devil's Modulation in your area can be found at:

They still have Radio Australia on their other frequencies, 9590 and
9590, 7240, etc. So they're using one of their transmitters (or one
of the contracted ones at Darwin), but they didn't preempt all of
Radio Aus. for this.

Well,

I guess that explains why the bands sound like buzz saws! They have
been extremely noisy for the last couple of days. Hopefully we will
have quieter periods soon.

I suspect before long our power grid will go down permanently. Then
SWLing will be perfect again without any electrical disturbances.

We will have to run everything off solar and wind power.

Peace

Seems to be somewhat out-of-date. There was a big shakeup in station ownership a few months back and none of that is reflected there. And I don't think WKDL 730 was putting out the hash this past weekend. (Usually I'm at work during the day so it's rare for me to listen to the AM band during the day.)

But the bad news is they show WMAL 630 as licensed but not on the air yet. They are basically in my back yard. Yikes!

Tim.

Not really...similar things have happened before.

We have a local FM repeater whose output frequency is 444.0 MHz. If you were monitoring this repeater while mobile and had a car next to you that was listening to a local commercial FM station at 100.3, it would block your receiver at 444.0

Why? The broadcast receiver oscillator was at 111.0 MHz (100.3 + 10.7). The fourth harmonic of the oscillator was at 444.0 MHz and there was no doubt that you could hear it!

This particular case didn't sound intentional--just that the pirate in Miami knew more about hip-hop than harmonics and/or mixing products.

I was actually on American flight 989 from LA to Miami about 3 years ago
when we had to do a fly around on final approach and the pilot announced
that there was "an illegal radio station interfering on the aviation band
and he could not get clear tower instructions." Shortly thereafter, a
Haitian pirate broadcasting in Kreyol was closed.

Ok, maybe there is room for compromise. I will admit that the interference to the aircomm may not have been intentional, but David will have to change his "Not necessarily a pirate." to most likely a pirate. In addition I will offer that the authorities shall push the offender out of a plane or helicopter from a height that would probably not kill him - After all it was hip hop that this fellow was playing.

regards
NEO

All radio listening is not local. But nearly all of it is. The main point
YOU do not get is that advertisers do not care about out of market
listening. They will not look at it and will defininately not pay for it.

In the case of AM, sykywave listening only happens at night, and advertisers
buy very little night advertising on AMs unless it is local sports.

Int he case of FM, out of market listening is generally from adjacent
markets, and the out of market signals generally do not cover all the
geography of the peripheral market, so advertisers buy local stations that
cover the entire local market, not just one area of it that is next to
another market.

The out of market listening on AM skywave is so small as to be unmeasurable.
It is unwanted by advertisers, so the whole argument is moot.
>

Radio ratings diaries do not ask questions. They record day by day, hour by
hour listening in blanks the diarykeeper fills in. The only instruction is
to fill in each day what you listened to and when you listened. There is no
questionnaire bias as there is no questionnaire.
>

IBOC and HD are the same thing. One is the technical term, the other is the
marketing term. And it sounds great.

When there is no usage of those adjacent channels, and there is a gain from adding HD, it does not matter.

Hi,

Thanks for suggestions on Ferrite Bead usage from older post, and for all
the past help.
Sure is a lot to learn.

Have one question on the ferrite beads:

For my receiving only antenna.

If I put some ferrite beads over the coax run in from the antenna to the
house, wouldn't
the beads (also) degrade the incoming received signal level?

I guess what's bothering me is that I don't see how they can absorb
noise "selectively" from the actual signal (30 MHz on down) ?

What's some of the very basic theory behind how these things actually work,
then ?

Thanks,
Bob

Yes, I caught the show, but was half-sleeping. Did they say the storm could wipe out electronic gear only if it was in operation? I think that was the premise the mayor of Brooklyn was operating under when she disconnected the grid. I think she figured when the storm gone she could just fire up all her gear.

I find it hard to believe that any storm or EMP type of event is going to kill transformers. Big steel laminations and fat copper wires. What was that all about?

Ferrite can be used to either absorb or block RF energy. People in this news group will mostly only consider the later action. The ferrite as used conventionally at HF frequencies is used to increase the inductance of a path. An increase in inductance in a path results in an increase in inductive reactance at any frequency. Here the idea is to prevent a common mode RF current on the outside of the coax shield from traveling the length of the coax. The differential mode RF current on the inside of the coax is not affected by the common mode choking action of the ferrite.

So the basic concept is the ferrite increases the impedance of the path to a common mode noise on the outside of the coax where the RF current is traveling in one direction. The RF electrical current is converted into magnetic field energy. Some of this energy is lost (dissipated) in the ferrite during the conversion from electric to magnetic and back again. The ferrite is not a perfectly conducting element for a magnetic field and has resistive loss to the field so it dissipates some of the energy.

The differential current on the inside is going both ways and the magnetic field of the current traveling in one direction on the inside of the shield is canceled by the current on the center conductor going in the other direction. The differential current fields cancel so the

conversion, magnetic field path loss does not occur. The net result is no change in the impedance of the path for a differential signal.

Yes, you are right Mark. Thanks for pointing this out. Not really sure where my math error is. I've become way too dependant on mathcad to do all my thinking for me. Looks like just a brainfart - only had to move the decimal over 6 places.

Not sure where the 25nH came from, should have just been 5nH/t
5mH *(1/1000) * (1/1000)

So that 8 turns should have been 5*8*8 or 320nH. Two cores stacked makes 640nH.

Maybe just j36 ohms at 9mc then.

In either case I think it's getting to be time for a balun tweak. Ladder is up near attic hatch so don't have to climb two floors I got nice big #43 cores at work that my boss gave me. I can probably set it up to run ok on 20m.

> This is the crux of the matter: Advertisers call the shots. They always
> have. Everywhere.

Sure. But both the stations and the advertisers are working from a flawed model. It's like two blind guys trying to take care of an elephant, based solely on how the tail feels to them.

The advertiser is told that if he does such-and-such, the tail will feel better according to some arbitrary attribute of how the tail feels. So he does such and such, and the tail feels better according to his measure.

But his measure has no effect on the real picture. Everyone sees through the same distorted lens, so they get the right results based on that view.

But the view has nothing to do with the real elephant, or listening audience.

Now, if Wendy's wants to advertise on a handful of high-powered stations blanketing the midwest about a product they are offering throughout the midwest, they aren't paying extra for the signal to cross arbitrary lines on a map -- the radio waves don't care.

I've said this nine ways from Sunday, and I don't know how to say it better, so let's try some fundamental questions -- I respect your viewpoint, Peter:

Do you think that terrestrial radio will have more listeners hearing those ads, or fewer, in 10 years? Do you think the so-called HD/IBOC (which is neither HD, nor in-band) will improve the situation or not?

Why?

If the cost for a more sophisticated methodology is so bad, what about the cost of adding all the extra, licensed crap to the transmitters?

Do you think people are willing to pay extra for all this? They will, one way or the other. Content is what keeps the listeners, not advertisers. If the content suffers, the listeners go away, and the advertisers will only be talking to themselves. Eventually even their myopic model will collapse around them.

We're simply witnessing the death of radio.

I found it to be pretty lame, actually. The only things worth hearing were the interview snippets between the dramatization. It would have been interesting to hear about that flare a couple years back and what its impact would have been had it hit directly.

I'd be very surprised if such a scenereo could possibly play out -- the worst case I could see happening is breakers across the grid being tripped or damaged and maybe -- maybe a national/continental black start being needed. That'd be bad enough but it wouldn't be months long. A week, perhaps, to get every corner of the country up, but major metro areas within a couple days.

Maybe the guys wearing tin hats have something after all <s>. The size of such a CME would have to be really tremendous and the power in it. It likely would not do anybody's equipment any good, and if it were that energetic, it would not make any difference if it were on or off to my way of thinking. I can see if a truly enormous overload were already in progress when the "storm" hit like the hottest day of the summer), transformers could be damaged, but what power company would not have more transformers ? Satellites for sure would be toast and that could take a very long time to replace, and th defense department would have a major problem.

I found it to be pretty lame, actually. The only things worth hearing
were the interview snippets between the dramatization. It would have
been interesting to hear about that flare a couple years back and what
its impact would have been had it hit directly.

I'd be very surprised if such a scenereo could possibly play out --
the worst case I could see happening is breakers across the grid being
tripped or damaged and maybe -- maybe a national/continental black
start being needed. That'd be bad enough but it wouldn't be months
long. A week, perhaps, to get every corner of the country up, but
major metro areas within a couple days.

Greetings All! Not a big catch but I found it interesting. Listening between 15.15UTC and 16.30UTC. I could not catch an ID, but at about 16.00 I had an S-9 signal on ARS out of Riyadh. From about 15.15 to close to 16.00 I heard a much lower signal in Arabic with no ID or music. Just sounded like a normal conversation between two guys. Then as I said at 16.00 Riyahd came in loud and clear. During part of the transmition I also heard what I guess was an jammer with a much lower signal on the same frequency in Hebrew with one song and lasted only about ten minutes. It was a little difficult to copy through Riyahd. I assumed it was Riyahd based on Eibi. Is this type of jamming common in the middle east? Also, I was trying to figure out the target with the code BSKSA. Can anyone help me with that? Thanks in advance for the help! Jon in South Carolina.
Listening today on a cheap RS DX-396 with a long wire attached to the whip.

PMFJI, but I believe that even the satellite radio services (XM and
Sirius) will be broadcasting commercials within a year or three, in
addition to charging subscription fees.

Yes. Actually, there's more truth to that analogy than most are willing to recognize. But the real matter is that it doesn't matter whether the model is flawed, or not. It's what works for the people who make the decisions and call the shots. It produces revenue and profits and business embraces it. Radio is in the business of selling the tails. Advertisers buy the tails by their feel, and turn that feel into experiences then sold to listeners. It doesn't even matter if it's a real tail....it only matters that it works. Advertisers buy, Radio stations sell. Neither is sees no benefit in changing what works.

And for the comparatively few, like you and me, it's distasteful that things work this way. It's a waste of resource. So be it. It is the way it is. If you can convince Radio there's money in changing it...well...then make your pitch. But if there's no money in it...more importantly, if there's no profit in it (that means the same revenue at no extra cost to most bean counters these days) then have at it.

> Now, if Wendy's wants to advertise on a handful of high-powered
> stations blanketing the midwest about a product they are offering

> throughout the midwest, they aren't paying extra for the signal to
> cross arbitrary lines on a map -- the radio waves don't care.

No they don't. And advertisers don't pay for the extra reach, it's true. But if, say Wendy's want's to boost sales in Decatur, buying WLS, WGN and WBBM aren't the cost effective way to do it. Yes, they're still making impressions in Decatur, but a week's run on three Chicago stations at $900 a throw will not equal the reach of one single day's schedule on WSOY, at $75 a throw. So the advertisers don't boost their WLS, WBBM and WGN buys to get the extra noise into Decatur...they buy a few spots on WSOY and WDZQ. Why? Because the combined reach of WLS, WGN and WBBM in Decatur is a statistical no-show compared to any local in the top 5. For a fraction of the cost.

It's bad business to spend money that produces so little return, so advertising buys are targeted to local audiences only, where there is significant listenting done. Since a station out of market has so little local reach in Decatur, getting back to the original point of this thread, WGN, WBBM and soon WLS can turn on the IBOC hash blowing away all the out of market listening, and do so without a care.

It's not something that I personally like. It's just what is. And it's primarily because advertisers, not radio stations, make the decisions about what reach is and is not important. Based on actual listening behaviours measured.

It's a numbers game. Averaged behaviours in desireable demographics. Stations are programmed to produce the desireable numbers. Or at least saleable numbers.

Actually listeners...not really the focus here.

>

> Do you think that terrestrial radio will have more listeners hearing
> those ads, or fewer, in 10 years? Do you think the so-called HD/IBOC
> (which is neither HD, nor in-band) will improve the situation or not?

Me personally? Fractionalization of the audience will bleed off listening, yes. I think so. Radio will adapt. As David likes to point out, listening levels per capita are only marginally less than they were in the 70's. Although, during some pretty detailed staff meetings at In finity, Mel Karmazin painted an entirely different picture. HD/IBOC FM has some advantages, without the liabilities of AM HD/IBOC. Multiple revenue streams and, ultimately, subscription radio among them. AM HD/IBOC is not so compelling to listen to as good AM Stereo. And it comes with some technical liabilities which we've all discussed. But then, listeners respond to content. If the content is what a listener finds appealing, quality is relative. Noise, on the other hand, is a

different matter. If HD does away with the crackle of electrical and atmospheric noise on AM then it will attract a listener base regardless of the audio quality, which to my ears blows chunks.

So, for AM listening, I think the jury is out as to whether HD/IBOC will actually make a difference. Ultimately, given that Powell's FCC mandated that all future modulation schemes be digital, it's here whether the public is ready for it nor not. Unless the Federal authorities decide to take the MW Band dark, as they did in Canada, HD/IBOC AM is here. And it's staying. Given no choices, the public will adapt and adopt. Whether listener levels will vary remains to be seen.

I don't care for it. But then, I don't do much listening, anymore, either.

>
> If the cost for a more sophisticated methodology is so bad, what about
> the cost of adding all the extra, licensed crap to the transmitters?

Hardware to do the job is a single cost per installation item. It's a cap item, not a recurring cost.

Ratings methodology gets paid for with each survey period. Recurring costs multiple times a year. Cap costs can be swallowed. Recurring costs are the ones to be avoided.

You can get a cap cost past the bean counters. Recurring costs they'll move heaven and earth to cut.

But the real costs of more sophisticated methodologies would be borne by the ratings companies. They have no motivation because there is no demand for them. If advertisers were screaming for more sophisticated methodologies, the ratings companies could justify the cost, and the advertisers would be willing to share the increased cost through higher station rates. But there is no such clamor. So there is no motivation, when what they're doing right now produces huge revenues and profits.

You don't raise costs unless there is a profit motive. And right now, there isn't. So cost per point, cost per thousand figures remain the same.

>
> Do you think people are willing to pay extra for all this? They will,
> one way or the other.

Yes they will. And eventually, they'll embrace it. Because there will be little option.

Will they grumble. They already are. Feder has been bitching in his column about the cost of HD radios and he can't tell the difference between HD and analog.

Eventually, that noise will die down. Look at cable. Bitching there, too. And lots of it. Paying for TV? Are you nuts?

Have you seen cable bills lately? Dish? Satellite Radio?

Will the public pay for HD Radio. Sure they will. By the time you fully dress an iPod system, you can drop half a kilobuck. Doesn't seem to be slowing things down. HD Radio, especially, when there is no option, will sell. At least on FM.

Content is what keeps the listeners, not
> advertisers. If the content suffers, the listeners go away, and the
> advertisers will only be talking to themselves. Eventually even their
> myopic model will collapse around them.

With ongoing perceptuals and nearly daily market research specifically addressing content, if the content suffers, Radio can know about it and make corrections pretty quickly. Those that don't, fail, are sold, and picked up by people who will. Remember that the programming model is NOT the sales model. They interact, but they are NOT the same. Programming content is crafted to attract a demo. Actual listenership is what is evaluated for Sales. Programming can be tuned, trimmed, altered, even changed wholesale, without altering the Sales/Advertising model in anyway, as long as the demo remains the same. And the Sales/Advertising model doesn't change even if there is a significant change in the numbers. Conversion rates are held to the same figures, only the percentage of national sales changes. The pitch only goes after different local businesses, with an adjusted rate.

Howard,

1. One thing the balun does do is provide isolation
between the antenna and feedline and this 'decoupling'
can make for a quiter antenna system.
-R- On this we can agree.

2. The balun will not necessarily 'integrate the signals',
in other than a 1:1 configuration it transforms impedance
and allows you to go from balanced to unbalanced line.
At some frequencies it may 'smooth out' the impedance
mismatch, however if you want to combine the signals a
triplexer would do the trick.
-R- Yes - The Balun would simply 'smooth out' the
impedance mismatch between the combined Dipole
Antenna Elements and the Coax Cable Feed-in-Line.
- - - I have often though that a Bal(3)Un(1) for these
types of Multi-Band (Multi-Element) type of 'combined'
Antennas would be a better Matching Device.
? WHAT ? For the Three Dipole Antenna with One Coax
Cable Feed-in-Line :
* Three separate Primary Windings of 30 Turns
# 1 - One for the 49m Dipole Wire Antenna Element
# 2 - One for the 31m Dipole Wire Antenna Element
# 3 - One for the 22m Dipole Wire Antenna Element
* One Secondary Winding of 10 Turns for the Coax
Cable Feed-in-Line.
With All Four (4) Windings on a Single Ferrite Core.

3. ARRL Antenna Book
-R- Books are wonderful and I do own a few books.
But in the media of the NewsGroups (RRS) a
WebPage (Link) that provides some information
and Insight and is more directly accessable by
most readers here. Plus my personal 'theme'
here is to Keep It Simple And Practical (KISAP)
with some basic "How To" Details (Description).

that's where i am coming from - iane ~ RHF

All the Clear Channel and Infinity ones, plus Emmis and Univision Radio. I
think it is about 13 or 14 now or testing.

I am just guessing you do not have a HD radio. I have several, and the HD
channels sound terrific.

We have at least one of everything on the market, including HD monitors at
our studios. It sounds terrific. Everyone who has listened to our test setup
agrees, too.

All stations repeat the main channel in HD. It is the HD-2 channel that will
have the new formats.

What makes you think the system would be down?

Telstra have underground cable to the towers. The other tend to use
microwave.

I agree completely. The commercial-free aspect of them is a
short-lived hook.

But their advertising model will be different, since their coverage is
nationwide by definition -- the terrestrial people should be looking
closely and their business plan for advertising.

But to stretch the analogy to its limits, the two blind guys are
putting conditioner on the tail to make it softer, but the elephant
never gets fed or gets any water. The elephant dies eventually, no
matter how wonderful the tail feels.

> of the audio quality, which to my ears blows chunks.

Yes. Do you remember when CDs first came out? The "golden ears"
complained about the artifacts, even thought the Nyquist Limit was
22,050 kHz. They found the sound fatiguing.

This time, one won't need a golden ear to hear the artifacts. I
cringe on what comes out of my car radio from NPR when they have a
feed filled with artifacts. When you can hear it over the road noise
on a car radio... that's an accomplishment.

It won't just sound bad, it will be painful to listen to.

>
> I don't care for it. But then, I don't do much listening, anymore,
> either.
>

Bottom line. No matter what the advertisers are willing to pay,
there's no return if there are no listeners.

> You can get a cap cost past the bean counters. Recurring costs
> they'll move heaven and earth to cut.

Yeah, I have my own experiences along those lines -- like the bean
counters being willing to pay 60% of the buyout cost on a lease for a
piece of equipment... that is, 60% per month! But the accounting
rules made it "cheaper" to do that, no matter where the money goes.

And the equipment, a computer system, would have been put on a 10 year
depreciation schedule. A severe case of unreality.

OBTW, that company is long gone, and they were a Fortune 500 player
when this was going on.

> >
> > Do you think people are willing to pay extra for all this? They will,
> > one way or the other.
>
> Yes they will. And eventually, they'll embrace it. Because there will
> be little option.

That I disagree with. The growth of podcasts, satellite radio, etc.,
will fill the void. For the longest time, I felt that radio would
endure, because of the low amount of infrastructure to keep it going.
I didn't count on the sheer stupidity of people behind radio.

> Eventually, that noise will die down. Look at cable. Bitching there,
> too. And lots of it. Paying for TV? Are you nuts?
>
> Have you seen cable bills lately? Dish? Satellite Radio?

Yes, I have. But cable has gone far beyond providing community access
to clean local TV pictures -- cable is clogged with networks
unavailable on broadcast TV.

Even so, there are people who simply have cut the cord to the cable
companies and simply rent/buy movies or don't have TVs. They are a
small minority, but they are there.

>
> Will the public pay for HD Radio. Sure they will. By the time you

> to be slowing things down. HD Radio, especially, when there is no
> option, will sell. At least on FM.

FM is the only place where the model even remotely makes sense. But
HD FM, taking advantage of the extremely wideband nature of FMBCB,
will be too greedy to just do it better -- it will fit multiple
streams into that bandwidth until they all sound like crap... like the
gas station that waters its gas down until the customers scream.

> >
> > We're simply witnessing the death of radio.

Time will tell. This message will last in archives that long, so
people like Edwardo can point and laugh in 10 years after radio grows
under his mercenary hand.

But my money is riding against it.

I don't think power transformers are stocked like spares at every power company site.. They are designed to be very reliable. There are probably spares around, but not many. I can't imagine a scene where a bunch of them could fail at once. They are rugged devices and I would thinjk well protected as well.

Are these niche formats expected to get people listening to the radio when they otherwise would not be listening? If IBOC significantly expands the audience, I can see an advantage for both the audience and the advertisers.

However, my Inner Conspiracy Theorist keeps telling me that IBOC won't expand the total radio audience much, if at all, and multicasting's biggest effect will be in drawing advertising revenue away from from the smaller, non-IBOC stations.

There are fuses all over the medium voltage power distribution system.
They are usually fusible links that pop-open when they trip for easy
spotting. Substations use circuit breakers the size of a car that can
occasionally make huge lightning bolts when they open.

A CME trips overloads at distribution control centers way more often
than it damages any hardware components. This causes other safety
systems to open circuits. Once the grid has shut down, it must be
brought back up in an orderly fashion. This takes time.

Actually, XM took commercials off the music channels two years after
start-up. I know; I programmed 5 of the channels.
>
> But their advertising model will be different, since their coverage is
> nationwide by definition -- the terrestrial people should be looking
> closely and their business plan for advertising.

Satellite has run commercials since its offset on the talk channels, and XM
started with commercials on all music channels but took them off. Neither
believes more than 5% of revenues will ever come from advertising.

Infinity HD 2 channels
Los Angeles:

Adult Hits KCBS HD2 "Variety Top 40"

Talk KLSX HD2 "Female Talk"

Alternative KROQ HD2 "Xtreme Active Rock"

Oldies KRTH HD2 "50s/60s Oldies"

Smooth Jazz KTWV HD2 "Classic Jazz"

Clear Channel

Los Angeles:

Hot AC KBIG HD2 "Disco"

Urban AC KHHT HD2 "Jammin Oldies with Hispanic Skew"

Top 40 KIIS HD2 "Kisspanic/Hispanic KISS"

AC KOST HD2 "Lite Classics (Madonna to Sinatra)"

Modern AC KYSR HD2 "All 80s/80s Hits"

These multicasts are launching on MONDAY (1/23).

Emmis has Power Dos on 1|05.9 and alternative on KZLA.

That makes 12.

And the final analogy would be that the elephant is only a tool. It
will be replaced by a younger, more complaint elephant that meets the
needs of both the blind men. If it dies, it will be replaced.

You, like me, are one who is no longer being served. It happens. The
more desirable are younger, hipper, or less demanding in areas not
easily provided for. The emperor may be naked. But we, and a few like
us, are the only non nudists in the empire. The those who advise the
emperor only listen to the many who are also naked.

>
> Yes. Do you remember when CDs first came out? The "golden ears"
> complained about the artifacts, even thought the Nyquist Limit was
> 22,050 kHz. They found the sound fatiguing.
>

And they were. Digital recordings by engineers recording with analog
mindsets. Too much equalization. Preemphasis. Compression. Then came the
'purists.' Mic to disk. No better. Finally came those who really got it.
Who understood the medium, and also understood the way listeners really
hear music. Back came some limiting and the spectral effects. But
applied with different intents. And applied differently by each
recordist, mastering engineer, and mixer. Some CD's still suck. But
nothing sounds like those early discs.

So it will be with HD. If it lasts, it will evolve. Like the CD, it
will eventually be embraced as a fidelity medium.

For the record, though, CD's were never intended to be high fidelity.
Philips promoted them as mid-fi media. Of course Philips also intended
the cassetted to be a dictation only medium...so things don't always fly
as intended.

Reality: listeners lost will be replaced. Every assault to radio over
the last 75 years has resulted in a revolution of sorts. With new
listeners being replaced by the old.

You and I will be replaced.

We already have been.

We're not in disagreement here. There will be options to Radio. There ARE options to Radio. My point was that for those who choose Radio, there will be little option but to embrace HD. And those who choose Radio will embrace it.

As to the sheer stupidity...I can tell you from my 4 decades + of experience on the inside...that hasn't changed. It's always been stupid on the inside.

But because they are a small minority, they don't matter to the Cable Companies. Or Satellite Companies.

So it is with Radio. Small numbers, even when large if taken in aggregation, do not matter. Because the numbers are small locally.

Hi!

I've some questions to you all.
I live in France and there is several experiments to move radio to digital at the moment. Some experiments focus on FM IBOC (no AM at the moment). I've red that there is a lot of FM IBOC radio in New-York (at least) and I also red a lot of complains about AM interferences, but none about FM interference.
I'd like to know how is FM IBOC in New-York? Is it true that quality sounds like CD and that IBOC improves coverage area? Is there any interference?

Thanks for your opinion.

Nathalie.

Er, no part of Aurora Ave. is in 98101 (Downtown Seattle). It really starts at the south border of 98109. The Battery St. tunnel is in 98121 (the Denny Regrade) and by the time Hwy. 99 gets to 98101, it's The Alaskan Way Viaduct.

Greetings All! Not a big catch but I found it interesting. Listening between 15.15UTC and 16.30UTC. I could not catch an ID, but at about 16.00 I had an S-9 signal on ARS out of Riyadh. From about 15.15 to close to 16.00 I heard a much lower signal in Arabic with no ID or music. Just sounded like a normal conversation between two guys. Then as I said at 16.00 Riyahd came in loud and clear. During part of the transmition I also heard what I guess was an jammer with a much lower signal on the same frequency in Hebrew with one song and lasted only about ten minutes. It was a little difficult to copy through Riyahd. I assumed it was Riyahd based on Eibi. Is this type of jamming common in the middle east? Also, I was trying to figure out the target with the code BSKSA. Can anyone help me with that? Thanks in advance for the help! Jon in South Carolina.
Listening today on a cheap RS DX-396 with a long wire attached to the whip.

HD, like FM stereo, is backwards compatible. You hear an analog signal on
current radios, and it detects and switches to the HD signal on an HD radio.

Porco Cane!

Why Bother Responding to Nazis like DXAce and those who support him
and agree with his fanatical notions?]

Some may wonder whether it makes sense to spend so much time and
energy responding to the claims of someone who openly consorts with
neo-Nazis, and whose agenda is so blatantly racist in nature. Though
it would be nice not to have to respond to such silliness, the fact
is, Taylor and his report have been cited approvingly by conservative
columnists and talking heads, from Walter Williams, to David Horowitz,
to the folks at the National Review, to Vanderbilt Law professor,
Carol Swain.

What's more, with studies suggesting that white perceptions of black
criminality play a prominent role in furthering racism, both
attitudinally and institutionally (in terms of support for racially
disparate and draconian crime policies), refuting this kind of
foolishness carries with it important personal and policy implications
as well.

However unappealing it may be to have to answer the racist claims of
bigots and fascists, the fact remains that given the appeal of racist
logic to so many, and given the strength of institutional racism as a
defining force in American life, we can hardly afford the luxury of
ignoring such positions, so as to "not give them legitimacy."

The sad fact is that racism already enjoys plenty of legitimacy, with
or without a rebuttal. Ignoring this reality isn't likely to diminish
its strength, but responding to it forcefully might, at the very
least, dissuade impressionable minds from accepting the twisted logic
offered by the racist right.

The Color of Deception

By Tim "WhiteMan" Wise

http://www.zmag.org/sustainers/content/2004-10/19wise.cfm

"A lie can travel half-way around the world while the truth is still
pulling on its boots."

Although this truism was penned long before the Internet, there is little doubt but that in the modern era, it has become more prescient than its author could ever have imagined.

When it comes to fast-moving lies, few can top one that has been distributed by white supremacists for the past several years. It is probably the most popular piece of racist propaganda in existence today, and because it relies on official government data, it comes across as sober, intelligent social science, rather than as the compendium of nonsense it happens to be.

The screed to which I refer is "The Color of Crime: Race, Crime and Violence in America," by white nationalist, Jared Taylor. Taylor is the publisher of the racist magazine, American Renaissance, and host of an annual conference, which attracts open neo-Nazis as well as a gaggle of academicians who proclaim black genetic inferiority.

According to Taylor, there are several "facts" about crime that have been hidden from view by the civil rights community. Among them:

--Blacks are much more dangerous than whites as evidenced by higher crime rates;

--Black criminals usually choose white victims and are far more likely to victimize whites than whites are to victimize blacks (both for regular violent crimes and hate crimes);

--Black crime rates justify racial profiling, since it only makes sense to focus law enforcement attention on those who commit a disproportionate share of crime; and finally,

--The interracial crime data makes white fear of African Americans perfectly rational.

But a close examination of these arguments proves that Taylor and his followers are either statistically illiterate, or knowingly deceive for political effect.

First, as for the disproportionate rate of violent crime committed by blacks, economic conditions explain the difference with white crime rates.

According to several studies, when community and personal economic status is comparable between whites and blacks, there are no significant racial crime differences (1). In other words, the implicit message of Taylor's report--that blacks are dangerous because they are black--is insupportable.

Secondly, to claim that blacks are more dangerous than whites because of official crime rates, is to ignore that when it comes to everyday threats to personal well-being, whites far and away lead the pack in all kinds of destructive behaviors: corporate pollution, consumer fraud, violations of health and safety standards on the job, and launching wars on the basis of deceptive evidence, to name a few. Each year, far more people die because of corporate malfeasance,

occupational health violations and pollution than all the street crime combined, let alone street crime committed by African Americans (2).

[Stoking Fears About Interracial Crime - A Look at How Nazis Do Math]

Next, Taylor claims that most victims of black violent crime are white, and thus, that blacks are violently targeting whites. Furthermore, since only a small share of the victims of white criminals are black (only 4.4 percent in 2002, for example), this means that blacks are far more of a threat to whites than vice-versa.

But there are several problems with these claims.

To begin with, the white victim totals in the Justice Department's victimization data include those termed Hispanic by the Census, since nine in ten Latino/as are considered racially white by government record-keepers. Since Latino/as tend to live closer to blacks than non-Hispanic whites, this means that many "white" victims of "black crime" are Latino/a, and that in any given year, the majority of black crime victims would be people of color, not whites.

But even if we compute the white totals as Taylor does, without breaking out Hispanic victims of "black crime," his position is without merit.

In 2002, whites, including Latinos, were about 81.5 percent of the population (3). That same year, whites (including Latinos) were 51 percent of the victims of violent crimes committed by blacks, meaning that whites were victimized by blacks less often than would have been expected by random chance, given the extent to which whites were available to be victimized (4).

As for the claim that blacks victimize whites at rates that are far higher than the reverse, though true, this statistic is meaningless, for a few obvious but overlooked reasons, first among them the simple truth that if whites are more available as potential victims, we would naturally expect black criminals to victimize whites more often than white criminals would victimize blacks.

Examining data from 2002, there were indeed 4.5 times more black-on-white violent crimes than the reverse (5). While this may seem to support Taylor's position, it actually destroys it, because the interracial crime gap, though seemingly large, is smaller than random chance would have predicted.

The critical factor ignored by Taylor is the extent to which whites and blacks encounter each other in the first place. Because of ongoing racial isolation and de facto segregation, the two group's members do not encounter one another at rates commensurate with their shares of the population: a fact that literally torpedoes the claims in The Color of Crime.

As sociologist Robert O'Brian has noted (using Census data), the odds of a given white person (or white criminal) encountering a black person are only about three percent. On the other hand, the odds of a given black person (or black criminal) encountering a white person are nineteen times greater, or fifty-seven percent (6), meaning the actual interracial victimization gap between black-on-white and white-on-black crime is smaller than one would expect.

In 2002, blacks committed a little more than 1.2 million violent crimes, while whites committed a little more than three million violent crimes (7). If each black criminal had a 57 percent chance of encountering (and thus potentially victimizing) a white person, this means that over the course of 2002, blacks should have been expected to victimize roughly 690,000 whites. But in truth, blacks victimized whites only 614,176 times that year (8).

Conversely, if each white criminal had only a three percent chance of encountering and thus victimizing a black person, this means that over the course of 2002, whites would have been expected to victimize roughly 93,000 blacks. But in truth, whites victimized blacks 135,931 times: almost 50 percent more often than would be expected by random chance (9).

Indeed, given relative crime rates as well as rates of interracial encounter, random chance would have predicted the ratio of black-on-white to white-on-black victimization at roughly 7.4 to one. Yet, as the data makes clear, there were only 4.5 times more black-on-white crimes than white-on-black crimes in 2002. In other words, given encounter ratios, black criminals victimize whites less often than could be expected, while white criminals victimize blacks more often than could be expected.

[Lies About Hate Crimes - More Fun With Nazi Math]

Taylor's claims regarding hate crimes are even more ridiculous.

The Color of Crime asserts that blacks commit a disproportionate share of racial and ethnic hate crimes against whites, while white-on-black hate crimes are far less frequent. But the data simply doesn't support such a claim.

From 1995-2000, blacks were 65 percent of racial and ethnic hate-crime victims, while whites were 21 percent of such victims (10). Adjusted for population, any given black person was nearly twenty times more likely to be the victim of a racially motivated hate crime than any given white. In 2001, there were approximately 4.6 times more white-on-black than black-on-white hate crimes (11), despite the fact that whites were between six and seven times more available in the population to become victims.

Considering that blacks are much more likely to encounter whites than vice-versa, this last statistic is especially alarming. After all, if blacks are nineteen times more likely to encounter whites than whites are to encounter blacks, any given black person would have nineteen

times more opportunities to commit an anti-white hate crime than a white person would have to commit an anti-black hate crime.

Since blacks are roughly one-sixth the size of the non-Hispanic white population, in order to determine the expected ratio of black-on-white hate crimes relative to white-on-black hate crimes given random chance, one must multiply the 19:1 black-on-white encounter ratio by one-sixth.

Once this computation is made, we find that differential rates of encounter and population availability would predict that if levels of racial hatred were equal between whites and blacks, and the willingness to commit a hate crime were equal between the two groups, in any given year there should be 3.15 times more black-on-white hate crimes than white-on-black hate crimes.

That in truth there are nearly five times more white-on-black hate crimes than the reverse suggests that blacks are much less likely to commit an anti-white hate crime than would be expected and whites are far more likely to commit an anti-black hate crime than would be expected.

[White Fear of Blacks - The Height of Irrationality]

Of course, above and beyond the mere statistical chicanery at the heart of Taylor's report, the larger point is that for Taylor and other racists to claim that black-on-white crime data justifies white fear of African Americans, or racial profiling by police is sheer ignorance.

Criminologists estimate that seventy percent of all crimes are committed by just seven percent of the offenders (12): a small bunch of repeat offenders who commit the vast majority of crimes. Since blacks committed roughly 1.2 million violent crimes in 2002, if seventy percent of these were committed by seven percent of the black offenders, this would mean that at most there were perhaps 390,000 individual black offenders that year (13). In a population of 29.3 million over the age of twelve, this would represent no more than 1.3 percent of the black population that committed a violent crime in 2002.

Since fewer than half of these would have chosen a non-Hispanic white victim (as noted previously), this means that less no more than seven-tenths of one percent of the black population would have victimized a white person in 2002: hardly the kind of fact that would warrant white fear of blacks as a group.

Furthermore, since whites were victimized 2.9 million times by other whites in 2002 (compared to roughly 614,000 times by blacks), this means that whites are 4.7 times more likely to be victimized by another white person than by a black person (14).

Thus, if crime data can justify white fear of blacks, it would also require whites to be terrified of white neighbors, co-workers, family and white strangers, for these are the folks most likely to victimize us.

[The Absurdity of Profiling]

As for profiling, Taylor insists that because of higher black crime rates, it only makes good sense to focus police efforts on the black community. But this is demonstrably ludicrous. If, as the Justice Department data suggests, blacks commit somewhere between 25-30 percent of violent crime in most years (23 percent in 2002), to profile blacks for crime will result in police being wrong, between 70-75 percent of the time (15).

And of course, profiling is not the typical method for uncovering serious already-committed crimes anyway, since solving such crimes logically involves using incident-specific information. Profiling is, instead, too often done as a way to uncover crimes, such as drug possession, that have yet to come to police attention.

As for drugs, there can be no doubt that profiling is irrational. According to federal data, blacks are only 13.5 percent of drug users, while non-Hispanic whites are over 70 percent of users (16). So to profile blacks for drugs is to guarantee little success in actually uncovering drug crimes.

[Conclusion - Why Bother Responding to Nazis?]

Some may wonder whether it makes sense to spend so much time and energy responding to the claims of someone who openly consorts with neo-Nazis, and whose agenda is so blatantly racist in nature. Though it would be nice not to have to respond to such silliness, the fact is, Taylor and his report have been cited approvingly by conservative columnists and talking heads, from Walter Williams, to David Horowitz, to the folks at the National Review, to Vanderbilt Law professor, Carol Swain.

What's more, with studies suggesting that white perceptions of black criminality play a prominent role in furthering racism, both attitudinally and institutionally (in terms of support for racially disparate and draconian crime policies), refuting this kind of foolishness carries with it important personal and policy implications as well.

However unappealing it may be to have to answer the racist claims of bigots and fascists, the fact remains that given the appeal of racist logic to so many, and given the strength of institutional racism as a defining force in American life, we can hardly afford the luxury of ignoring such positions, so as to "not give them legitimacy."

The sad fact is that racism already enjoys plenty of legitimacy, with or without a rebuttal. Ignoring this reality isn't likely to diminish its strength, but responding to it forcefully might, at the very

least, dissuade impressionable minds from accepting the twisted logic offered by the racist right. _____ Tim Wise is an antiracist essayist, activist and father. Most likely the 790 signal is not supposed to cover your area with a
listenable (and thus protected) signal. If you are referring to the 790 in
Saginaw, it is not protected to Grand Rapids.

"Even Mr. Struble of iBiquity put the most optimistic date for an analog
shutdown as 12 years from now, though he thought that was unlikely."

By the way I read this, Bob Struble, President, CEO and Chairman of iBiquity
Digital Corporation, is anticipating an analog shutdown sometime after 2018.

http://www.nytimes.com/2005/07/28/technology/circuits/28basics.html?ei=5090&en=d7749d9c234
8d999&ex=1280203200&partner=rssuserland&emc=rss&pagewanted=print

So, please reassure us. Tell us Bob Struble was misquoted by the New York
Times. Tell us analog radio will remain for HD radio receivers to be
compatible with.

Just saying HD radio is currently compatible with analog doesn't really
address the point, does it?

I think the impedance of that antenna is depended on the centered
termination resistor at 600 ohms. There is also a 1/4 wave transformer
section. This is from memory I didn't look it up. Since this being used
fro receiving and not transmitting where you are trying to use the
antenna fro a load I would not bother with the termination resistor or
impedance transformation section of the antenna design and just use it
as a basic loop antenna. The impedance of the loop will be somewhere in
the 50 to 100 ohm range so you don't need a transformer.

I took the context of the post I replied to te be "today" and not 12 years
in the future. By tha6t time, most of today's analog receivers will be gone,
irrespective of the nature of broadcasting over a decade from now.
>
> Just saying HD radio is currently compatible with analog doesn't really
> address the point, does it?

Sure it does. How many electronic devices that are 12 years old are
currently being used in the average household? R-390's don't count, btw.

2691. FRS Robot transmission?

Except for the DVD players, all my TV/Video gear. With the exception
of the XM receiver, the Fanfare tuners, and my studio gear, all my audio
hardware. The microwave is an AMANA commercial unit that I bought in
'86. The radio in my office is Proton 300 I bought in the early 90's
and my clock radio is a Proton 320 from '88.

You don't want to know about what's in my radio room.

Quite a bit of the electronics in my house is 12+ and counting. And
of the people I know, I'm the radical one whose stuff is 'all new.'

There's a bit more out there than Marketing would have you believe.

Not true. XM has always had some commercial-free music channels.

It's the regular stream, delayed about 5 seconds. A friend of mine
who's a junior executive at CBS says that's the official SOP until
some kind of agreement with Clear Channel kicks in.

If that were the case, I'd believe it, but given that
I can look in my own house and find radios (not
shortwave and definitely not collectible) that are
in active use and are older than 12 years with ease,
I'd rather doubt it.

> > Just saying HD radio is currently compatible with analog doesn't
really
> > address the point, does it?
>
> Sure it does. How many electronic devices that are 12 years old are

btw.

Clock radios, televisions. Cassette players (if you've
got one). Boom boxes. VCRs. CD players. Receivers
that are no longer the primary (courtesy of HT), but
are still around and can serve a useful purpose.
Calculators. Older telephones. Atari 2600, which
still gets some use from the kids.

In short, items that are at a mature level, technologically.
Each one of those items doesn't cost a lot to replace
individually, but if you add them up it is not an insignificant
chunk of change to the average consumer.

If you tell people that they are going to turn off
the radio signal that the average person will listen
to and they have to buy an item that costs $50 or

more to replace each radio they own, you'll get some people pretty pissed off. Why, they would ask, do you want to screw around with something that works well enough as it is with radio that was bought 30 years ago for $5?

Giving people the option to upgrade (such as DVD over VCR, and color television over black and white) is one thing, and if given the opportunity to do so they might; but forcing people to is quite another. Maybe you could make an argument that the PC has made people more compliant about upgrading things, but I know plenty of people who simply can't afford to drop $300-$400 at a time to bring their computer up to snuff, much less other things like HD radio.

The situation would be much better if the band was split up between
analog and digital.

2699. Keepers: Shortwave Radios That Last

Newsgroup: rec.radio.shortwave
Date: 2006-03-21 20:48:28 UTC
From: "ve3..." <ve3iut@hotmail.com>
Message-ID: <1142974108.550814.81480@i40g2000cwc.googlegroups.com>
Source record: 68239

Over the years I have purchased way too many short wave radios, most of which ended up in the garage. A few I keep at hand for various needs and I thought my experience might be of interest to those bitten by the "gotta have it" bug.
PRINCIPLES
1. There is no radio that will do everything you want.
2. You need lots of carefully chosen radios to do different things. (show this to the wife)
3. There are many ways to sneak a new radio into the house. ("What? this old thing? Why I have had it for years! Wives are never quite sure as all radios look the same to them) Avoid the dreaded lament, " You had lots of money 1982, You went and let that Collins make a fool of you, Why don't you do right, Like the other men do, Get out of here and get me some money too! As if I had a money tree out back or something to fend off the incessant demands for food, rent, heat and other things irrelevant to SWL. But I digress.

BEST ALLROUND : SONY SW7600G. Good sensitivity on SW, AM, and FM. Clear tone. The antenna whip, and mini jacks are not robust and are hard to fix. The synchronous detector makes all the difference under severe fade conditions.

BEST PORTABLE: GRUNDIG S350. Good sensitivity on SW, AM and FM. Clear tone. Handy size to grab onto and take to the yard or bath. Known as the "shifty 350" because of its horrible drift on AM and SW.

BEST TONE: GENERAL ELECTRIC SUPERADIO II . Superb tone, excellent sensitivity, easy to align, a bit heavy, but puts out lot of sound outdoors. Drifts on AM. I had a GE Superadio III at one time and I disliked it so much I gave it away. I am not sure exactly why I disliked it, it received ok, and sounded good, but the tuning was like skating on thin ice. And it was very tricky to align.

BEST OLD ANALOG: GRUNDIG YACHT BOY206: Near the last of the European-made SW radios. sensitive, all the SW bands nicely bandspread for easy tuning, compact, good tone, long battery life, quiet circuits, really all that is needed for SW listening. I use it to scan the bands quickly.

BEST MINI: ETON E100: Good for walks or to slip in a pocket. Sensitive, clear tone, state of the art, tiny push buttons, complicated menus, a remarkable no compromise miniature. The only trouble is that it is so small I tend to lose it.

If it is possible to limit your SW radio collection to five radios, these would be a good long-term selection

But I must go. My wife has arrived and is demanding to know why I am wasting my time on this thing when there are 3749 chores to do and her mother was right: I am a good for nothing lazy layabout bum and she should have married Raoul who became a lawyer AND a doctorl and I must think of an answer which is difficult because she is probably right.
In haste and 73

Wrong. When the sytem launched, all music channels had 6 minutes of "ad
quota" which was not used because nobody wanted to advertise on satellite
int he first few years. Later, when Sirius made inroads and started
promoting commercial free music channels, XM killed the commercial
opportunities on their music channels to be equal to Sirius.

From the start, I was programming 5 of the music channels, and two years and
a couple of months later the commercial avails were eliminated.

That is HD-1. All HD main channels repeat the analog channel with a delay
that fills a digital buffer for fallback. The HD-2 channels are as listed.
And they are on, for Emmis, Clear and CBS. There is no "agreement" with CBS
and Clear as that would be collusion.

My friend Stephanie in NYC reports that IBOC interference to second adjacent channels is less than tolerable.. I can't believe that the FCC has let this boondoggle into service at all. There used to be good engineering standards to keep the bands free of garbage interference. If they wanted to destroy the bands, why not just let the pirates have free reign??? At least then the interference could be listened to without spending $300 on a piece of crap radio that won't pick up the IBOC stations unless it's in the shadow of the towers..

And they observed that people weren't paying for commercials, so
they shut them down until the market penetration is high enough
to support them.

It'll grow gradually, like TV advertising did. In the early years
I was shocked the first time a station had the nerve to play TWO
COMMERCIALS IN A ROW! Nowadays, ten in a row isn't uncommon.

Figure in 2007 many stations will play three commercials per hour,
and it'll gradually ramp up from there to about half the level
found on broadcast radio now. (Just a few minutes ago, I turned
on the radio and counted twelve one-minute commercials in a row
on one station; don't know how many preceded my tuning in.)

That's where you're wrong. We are moving on. But not to your QRM generating three channel wide garbage that it takes a $300 radio to hear at all (and that's only if you have a large antenna or are within sight of the towers). We're moving on to Ogg-Vorbis, mp3, etc., where we can provide our own selections of music for hours on end, and without your 15 minutes plus of commercials per hour, and without paying $13 a month for a sketchy satellite signal. Radio is dying, it's commiting slow suicide. Sad to see it happening, when I was growing up, radio served it's audience.. now it only serves itself, and does a piss poor job of even that.

Digital audio broadcasting or DAB is a technology for broadcasting
audio programming in digital form that was designed in the late 1980s.
The original objectives of converting to digital systems were to
enable higher fidelity, greater noise immunity, mobile services, and
new services, but sadly DAB now invariably offers audio quality that
is lower than that available on FM.

The acronym DAB is used both to identify the generic technology of
digital audio broadcasting, and specific technical standards,
particularly the Eureka 147 standard described below. Standardization
of DAB technology is promoted by the World DAB Forum, which represents
more than 30 countries but excluding the United States, which has
opted instead for a system called HD Radio.

I was listening to Harry Shearer on KROQ with the <2 icon on my
Recepter HD glowing bright blue as I was typing that message. Same
program as the analog and HD1, delayed a few seconds longer than HD1.

Addendum:

As a former broadcast engineer myself, I would have been ashamed of creating interference to another station, no matter whether it was in our supposed 'market' or not. In Portland, a LOT of people listen to stations outside the market. Stations from Salem, Hillsboro, and even The Dalles are quite popular and can (or at least COULD) be heard easily in most parts of town (well, the station in The Dalles mainly in east and northeast areas). The point really should not be whether a statistically large portion of a market listens to rimshots or even DX, the point should be good engineering practices. IBOC is not a good engineering practice.

The interesting broadcast from the Coalition Maritime Forces heard here at 2302 on 6844 USB. Alternating in English/Somali (or Arabic).

Transmission ended at 2310.

Thanks to Harold Frodge for the tip in DXLD 6-046.

That is who worked with. All music channels were to be commercial, 6' max,
at the offset. They changed in reaction to Sirius going non-commercial on
all music channels.

The receivers are getting cheaper and better. I have a newer Boston
Acoustics HD, and it gets all the HD2 channels inside a building that faces
away fromt he transmitters. By the time there is more content, there will be
many more recievers out, and the price point will move down. My first VHS
was $800. My first CD player was $1500. My first DVD player was over $300. A
year or so later, prices were down by more than half. Now you can get a DVD
player for $19 after a rebate.

Actually, the big players, starting with Clear Channel, have 10 minute
commercial limits.

> Radio is dying, it's commiting slow suicide.

Radio is changing, not dying. The cume is within 2% of what it was in the
late 60's. The usage by target demos, 18-54, is only off a few percent from
the levels of the 60's and 70's in Arbitron, and the levels of the 50's in

other surveys. Radio may be used less in the overall entertainment mix, but it serves 95% of the people well, as it always has.

While it IS true that there is massive corruption in the Bush Administration, I doubt that Charles Schlund knows any more about it than I do, or that Mr. Schlund is being subjected to "electronic torture". If W really wanted to silence Schlund, he'd simply throw him in prison, or cause him to "commit suicide". Remote control torture is a kook fantasy. Even in the high tech era, torture is done in person.

There have been so many good portables, portatops and tabletops in the past 30 years that coming up with a consensus list would be all but impossible.

For sheer audio quality the old Panasonic RF5000b would be very hard to beat on any band. And I'll leave my list there.

AM "IBOC" actually occupies the first-adjacent channels each side of the main carrier. Thus it is a disaster on a crowded AM band. Partly for this reason it is not (yet) authorized at night. The FCC ignores the laws of physics in this case. Also, many US stations have directional antennas that won't work correctly for the IBOC sidebands.

FM IBOC fits within the FCC's extablished "mask" for FM channel occupancy. This mask is a bit unrealistic - and IBOC WILL interfere with stations on the + and - 200 kHz channels. In much of the USA nearby FM stations aren't on these channels so IBOC interference should not be a problem. BUT many cheaper FM receivers are not selective enough to reject interference from IBOC on the second-adjacent channels (+ and - 400 kHz). Thus the complaints from "Brenda Ann".

FM IBOC presently is only authorized about 10% of the power of the associated analog FM station. Even with this low power coverage isn't bad on a good receiver. The "$300" receiver that Brenda Ann mentioned has rather poor sensitivity and is a bad example of the potential of IBOC. That radio is so bad that external antennas are really necessary - the ones supplied with the radio are inadequate.

The digital encoding used by IBOC is nearly obsolete. Better codecs have existed for some time. Most FM IBOC stations will want to run a second audio channel - so that means 48 kilobits per second for the main and 48 for the second channel. This is certainly NOT adequate to get "CD Quality". Audio quality is said to be rather good if the entire available 96 kilobits per second are used for a single

channel - but most stations aren't operating that way. A MAIN advantage of FM IBOC is that it rejects multipath signals better than analog FM does.

In my opinion, IBOC is not worth the effort. Poorer audio in most cases. Will obsolete all today's radios if/when analog is turned off, etc, etc.

Broadcasters want FM IBOC because it gives them a second channel for advertising sales. But will it double the number of people who listen to the radio? No. But it will add considerably to the costs of the station. Does that make economic sense? That won't be proven for a decade or two when there are enough IBOC radios to matter..

Radio reviews this,radio reviews that,,,, heck,they even do reviews on those cheap two bit made in China radios.I bought a new Panasonic RF-2600 AM/FM/Shortwave radio at a Service Mercandise store about 23 years ago,I still own that radio too.I wonder why those big shot radio reviewers haven't done a radio review of a Panasonic RF-2600 radio? I have looked on the internet before,I haven't seen a review of that model radio yet.

No matter though,I am the best reviewer of my radios.

Could they use the audio of a satellite video up/down link on their remote
broadcast trucks?
Land-line and cell phone systems have back-up power generators and large
banks of batteries.
Calls are automatically rerouted around nodes that are out of service.

No! The elephant is the audience. The sightless people use their
hands to examine the tail. Their hands are the tool; feeling the tail
only is their misuse of the tool.

The condition the tail and ply it with skin and hair treatments. All
the other blind people come over to feel the wonderful tail in envy.
But the elephant is dying -- it hasn't been fed.

Eventually the elephant dies and the blind caretakers will wonder what
happened. Likewise, eventually the house of cards that is radio today
will fall down, and all the "wise men" will wonder what the hell
happened.

Some of those younger people will have ears, too, and they'll want to
listen to something besides hip-hop. When they hear live jazz, then
hear it on their "HD" radio, they will be disgusted.

>
> And they were. Digital recordings by engineers recording with analog
> mindsets. Too much equalization. Preemphasis. Compression.

Only some of them. I can think of notorious examples off the top of
my head.

But the pain was hearing the unfiltered aliasing above 22 kHz.
Those folks noticed.

> Some CD's still suck. But
> nothing sounds like those early discs.
>
> So it will be with HD. If it lasts, it will evolve. Like the CD, it
> will eventually be embraced as a fidelity medium.
>

No. I utterly disagree. Today I can hear the artifacts on a stream
from NPR. The technology isn't constrained by any format -- the

satellite service to feed the local stations is compressed, and they
chose to compress it too much, because whoever made that decision
couldn't tell or didn't care.

And *THAT* is how it will be with HD.

> For the record, though, CD's were never intended to be high fidelity.

I disagree there, too. Wasn't the initial capacity of a CD set by the
head of Sony to correspond to the length of his favorite orchestral
piece?

> Philips promoted them as mid-fi media. Of course Philips also intended
> the cassetted to be a dictation only medium...so things don't always fly
> as intended.

It wouldn't surprise me that Phillips and Sony were on different
pages, but that's too far a reach for me to believe. I remember how
everyone was talking about DAD's as they were called initially.
"We're gonna blow away metal tape," gloated one. With reason -- they
did. But all the publicity they sought was about the medium -- 100dB
dynamic range, infrasonic to 22 kHz, flat response.

Not enough. Receiver designers will struggle to deal with the limited
amount of information present in the heavily compressed,
low-sample-rate streams. They will make it sound better, but DAC/ADC
technology for sound reproduction is mature now. You can't recreate
the analog signal if the information isn't in the digital stream.

That's true, but there was always someone to break the model. When
DJs were forced to use boring playlists after the Payola scandal,
Wolfman Jack did just fine with his border blaster clear up to L.A.
He also made a ton of money doing so.

Today... well, the model may not be broken. We'll see what the
classical and jazz stations do.

My microwave, my main TV, my small portable TVs, my Rotel reciver, my speakers, my video source switch, my audio source switch, my VCR, my laserdisk player. My DVD player is approaching that age. My clocks, my last car (and its AM-stereo receiver)... hell, even my CF light bulbs are coming up on 10 years!

Not everyone buys something new every year. Not everyone *can*. Some things are also so good that they really aren't improved upon -- I'd like to see a receiver/tuner that's better than my Rotel. Good freakin' luck.

Radio stations used rudimentary research and tightly controlled playlists from the time the first Top 40 station debuted in August of 1952. The reason they were called Top 40 was that they played the top 40 selling / requested / jukebox played songs. The jocks could not change the songs, and those stations, often with numbers like a 40 share, prospered enormously.

The payola incidents were hardly a scandal. Most of the nation knew nothing about them.

There were only a couple of payola indictments, and most stations were very clean. It was nearly a decade between the first Top 40 staiton and the first payola indictment. And all the time, most stations had very controlled, inflexible playlists.

> Today... well, the model may not be broken. We'll see what the
> classical and jazz stations do.

The only jazz stations are non-cpommercial, and there are very few commercial classicals left, either. Neither format generates ratings. I have worked at a jazz station, and both managed and owned a classical one, so I am not against the format... it is just not viable today.
>

> Good post. Good luck convincing Peter...

You can convince neither of us, as the listening figures show only minute erosion over historical levels. Today, average individual listening is 20 hours 15 minutes a week. In 1950, during the freeze, listening was 21 hours. In 1970, about 94.5% of Americans listened to radio. today, the figure is between 93% and 94% in every US market.

the audience is not leaving. Some demos (teens and over-55) are listening less, but that is because stations do not program for those ages. Otherwise, radio is far better off than you think it is. facing problems and challenges? Sure. Dying rapidly? Nope.

2744. Re: Three Band : 49 & 31 & 22 Meter Bands Shortwave Listener (SWL) Tri-Band Dipole {Wire} Antenna On-the-Fence

Newsgroup: rec.radio.shortwave
Date: 2006-03-22 03:41:42 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1142998902.337197.207040@z34g2000cwc.googlegroups.com>
Source record: 68083

BM [K5QWG],

What you say is correct if the Fan Dipole is being
used properly as a Single Band Amateur Antenna.

How Ever ! ! ! :o) Take the same Antenna and . . .
[Remember we have an Antenna built On-the-Fence
and for what ever reason {or lack of understanding}
the Shortwave Listener (SWL) has decided the a
Dipole is the only thing {Antenna} that they want.
Plus the want a Mutli-Band Antenna to cover a few
of the Shortwave Bands for Broad-Cast Program
Listening (BCL)]

SO HERE WE GO AGAIN - - - - - - - - - - - - - -
This is a Three Band : 49 & 31 & 22 Meter Bands
Shortwave Listener (SWL) "Receive Only" Tri-Band
Dipole {Wire} Antenna built on a On-the-Fence
Question What Do We Do To Make It 'perfrom' ? ? ?
? To Perform - Or Not To Perform - - - Is That a Question ?
A little better across the Shortwave Bands so we can
"HEAR" a little of everything from 1.8 MHz to 30 MHz.
Not a good answer but never the less a fair answer is
the 4:1 Balun to 'smooth-out' the impedance mismatches
from the Three (3) Dipole Antenna Elements and provide
a fair 'match' from the three of them across the Shortwave
Bands; know that they are One-Foot, Three-Feet and
Five-Feet above the ground when Idealy they would be :
49m = 38.5 Feet above AGL
31m = 24.5 Feet above AGL
22m = 17.1 Feet above AGL

alas - it is an imperfect world - iane ~ RHF

THESE coalition forces?

==========
People in Haditha said that, after the bomb exploded, US troops went
into nearby houses and shot dead 15 members of two families, including a
girl aged three.

Khaled Ahmed Rsayef said a brother and six other family members were killed.

"American troops immediately cordoned the area and raided two nearby
houses shooting at everyone inside," he told the Associated Press. "It
was a massacre."

Lt Gen Peter Chiarelli, a senior officer in Iraq, said about 12 marines
were being investigated.

Not long after I bought my new Panasonic RF-2600 radio,two things happened to it all by itself.It started drifting badly (it still drifts badly) and it stopped working all by itself.I have never used the head phones jack (I dont like to use head phones or earbuds,I never use them at all) on that radio before,but unless I wedge something between the metal body of the head phones jack and the plastic housing,the radio will not turn on at all.As far as pulling in radio stations is concerned,the radio is only mediocre at best.Summing it all up (remember now,I bought the radio brand new at a Service Merchandise store) in my very unprofessional radio reviewing opinion,,,, I would not reccomend that Panasonic model of radios to anybody.

Heavy cloud cover obstructs/blocks the satellite signal.No signal,no audio and no video (except for a blue band across the bottom of the tv screen that says Searching For Signal,or something like that) either,so the tv screen goes dark and quiet.Sometimes though,the heavy cloud cover isn't qute heavy enough to completly obstruct/block the satellite signal and there are big stop action pixels on the tv screen and the video/images on screen look as though they are frozen in place untill the satellite dish antenna can pick up a better signal and the audio sounds like it is breaking up,sort of like somebody loseing their cell phone signal.

Hello:

Thank you for excellent explanation.
Very clear.

One more point, please:

Does it make sense to put the beads on both the emitting coax and the
receive-only antenna coax, or just the
noise emiting (Comcast) cable ?

Thanks again,
Bob

2769. easy way to make money

Newsgroup: rec.radio.shortwave
Date: 2006-03-22 13:14:20 UTC
From: michael_roberts17@hotmail.com
Message-ID: <1143033260.693663.322720@j33g2000cwa.googlegroups.com>
Source record: 68159

TURN $6 INTO $42,000 EASILY!!!FOR REAL!!! THIS IS REALLY EASY MONEY!! TRUST ME IT WORKS !!! BUT YOU HAVE TO FOLLOW IT TO A LETTER FOR IT TO WORK!!!! A while back, I was browsing through newsgroup, and came across an article similar to this that said you could make thousands dollars within weeks with only an initial investment of $6.00! So I thought, "Yeah, right, this must be a scam", but like most of us, I was curious, so I kept reading. Anyway, it said that you send $1.00 to each of the 6 names and address stated in the article. You then place your own name and address in the bottom of the list at #6, and post the article in at least 200 newsgroup. (There are thousands) No catch, that was it. So after thinking it over, and talking to few people first, I thought about trying it. I figured what have I got to lose except 6 stamps and $6.00, right? Like most of us I was a little skeptical and a little worried about the legal aspects of it All, So I checked it out with the U.S. Post Office (1-800-725-2161) and they confirmed that it is indeed legal! Then I invested the measly $6.00. Well GUESS WHAT!!..... Within 7 days, I started getting money in the mail! I was shocked! I figured it would end soon, but the money just kept coming in. In my first week, I made about $25.00. By the end second week I had made a total over $1,000.00! In the third week I had over $10,000.00 and it's still growing. This is now my fourth week and I have made a total of just over $42,000.00 and it's still coming in rapidly. Its Certainly worth $6.00, and 6 stamps, I have spent more than that on the lottery!! Let me tell you how this works and most importantly, why it works.....also, make sure you print a copy of this article NOW, so you can get the information off of it as you need it. I promise you that if you follow the directions exactly, that you will start making more money than you thought possible by doing something so easy! Suggestion: Read this entire message carefully! Follow the simple directions and watch the money come in! It's easy. It's legal. This program remains successful because of the honesty and integrity of the participants. Please continue its success by carefully adhering to the instructions. You will now become part of the Mail Order business. In this business your product is not solid and tangible, it's a service. You are in the business of developing Mailing Lists. Many large corporations are happy to pay big bucks for quality lists. However, the money made from the mailing lists is secondary to the income which is made from people like you and me asking to be included in that list. STEP 1: Get 6 separate pieces of paper and write the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." Now get 6 US $1.00 bills and place ONE inside EACH of the 6 pieces of paper so the bill will not be seen through the envelope to prevent thievery. Next, place one paper in each stating the above phrase, your name and address, and a $1.00 bill. What you are doing is creating a service by this. THIS IS

ABSOLUTELY LEGAL! Mail the 6 envelopes to the following addresses: #1) Sandra Stewart, 504 Larry Dr., Seagoville, Tx., 75159 #2) Brenda Willis, 3152 Vista View Blvd, Columbus, Ohio 43231 #3) fox Newman, 2611 Newhall st, San Francisco, CA, 94124 #4) Kenny Ho, 12047 Westlock Dr., Tomball, TX 77377 #5) Nilca Ana-Maria, Aleea Tohani 1, bl 30, sc 2, ap 46, sector 4,Bucuresti, Romania, cod 75128 #6) Michael Roberts, P.O. Box 112 Coley's Point, NL, Canada, A0A 1X0 STEP 2: Now take the #1 name off the list that you see above, move the other names up(6 becomes 5, 5 becomes 4, etc.....) and add YOUR Name as number 6 on the list. STEP 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups, message board. (I think there are close to 24,000 groups) All you need is 200, but remember, the more you post, the more money you make! DIRECTIONS: HOW TO POST TO NEWSGROUPS, MESSAGE BOARD Step 1) You do not need to re-type this entire letter to do your own posting. Simply put your cursor at the beginning of this letter and drag your Cursor to the bottom of this document, and select 'copy' from the edit menu. This will copy the entire letter into the computer memory. Step 2) Open a blank 'notepad' file and place your cursor at the top of the blank page. From the 'edit' menu select 'paste'. This will paste a copy of the letter into notepad so that you can add your name to the list. Step 3) save your new notepad file as a .txt file. If you want to do your postings in different sittings, you'll always have this file to go back to. Step 4) Use Netscape or Internet explorer and try searching for various newsgroups (on-line forums, message boards, chat sites, discussions.) Just example you log on any search engine like yahoo.com, google.com, altavista.com, excite.com, etc., then you search with this subject ''millionaire message board'' or ''money making message board'' or ''employment message board''or ''money making discussions'' or ''money making forum'' or ''business message board'' etc.You will find thousands & thousands of message boards. Click one by one then you will find the option post a new message. : Step 5) Visit these message boards and post this article as a new message by highlighting the text of this letter and selecting paste from the edit menu. Fill in the Subject, this will be the header that everyone sees as they scroll through the list of postings in a particular group, click the post message button. You're done with your first one!. Congratulations..... THAT'S IT! All you have to do is jump to different newsgroups and post away, after you get the hang of it, and it will take about 30 seconds for each newsgroup! ** REMEMBER, THE MORE NEWSGROUPS OR MESSAGE BOARD YOU POST IN, THE MORE MONEY YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 200** That's it! You will begin receiving money from around the world within days! You may eventually rent a P.O. Box due to the large amount of mail you will receive. If you wish to stay anonymous, you can invent a name to use, as long as the postman will deliver it. **JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT. Now the WHY part: Out of 200 postings, say I receive only 5 replies (a very low example).So then I Made $5.00 with my name at #6 on the letter. Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #5

and only 5 persons respond to each of the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my name at #4 and only 5 replies each, I will bring in an additional :$125.00! Now, those 125 persons turn around and post the MINIMUM 200 with my name at #3 and only receive 5 replies each, I will make an additional $625.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at #2 and they only receive 5 replies, that just made me $3,125.00!!! Those 3,125 persons will all deliver this message to 200 newsgroups with my name at #1 and if still 5 persons per 200 newsgroups react I will receive $15,625.00!With an original investment of only $6.00! AMAZING! When your name is no longer on the list, you just take latest posting in the newsgroups, and send out another $6.00 to nameson the list, putting your name at number 6 again. And start posting again. The thing to remember is, do you realize that thousands of people all over the world are joining the internet and reading these articles everyday, JUST LIKE YOU are now!! So can you afford $6.. and see if it really works?? I think so..... People have said, 'what if the plan is played out and no one sends you: the money? So what are the chances of that happening when there are tons of new honest users and new honest people who are joining the internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with thousands of those joining the actual Internet.Remember, play FAIRLY and HONESTLY and this will work.

The first top 40 station was KOWH in Omaha in 8/52. It played pop hits of
the day. It was not until the mid-50's that Top 40 stations added rock 'n'
roll, and they were nearly 100% consistent with playing 40 researched songs.
Period. There was nothing scandalous, as the target young demos accepted the
new music trends and no station that got a 30 or 40 share was "scndalous."

They affected Lana Freed and NY. Most of hte nation had no idea who he was.
Most of the nation had no interest in payola.

No, Brenda Ann spoke about engineering standards that are outdated and
arcane. Interference on first adjacents is irrelevant if nobody in the
interference zone listens to first adjacents. The principles of physics do
not change. It is the way radio is used that has changed, and there are more
than a few Luddites here trying to bring back things that died decades ago.

Well, my radio collection has been distilled down to the keepers, but
I don't know that I will claim that they are ultimate keepers since
the one I've had the longest has been with me only 9 years.

Not enough time, in my opinion, to consider it a "forever" radio. For
all I know, it may still die of some flaw.

BTW, R-392, IC-R8500, RX-340.

R-392: Built like a tank, weatherproof, easy to repair.

IC-R8500: Excellent fundamentals, built like a tank. Possible fatal
flaw: component in PLL often blows out, but I've not had it happen to
me.

RX-340: Built reasonably well, does just about everything you could
ask of a radio.

My GE SuperRadio III has a handle; takes batteries; has the best sound
system of any of my portables -- kind of a monaural am-fm boombox. Has
a woofer and a separate tweeter with tone controls. Only about $37 at
Amazon.com

For more bells and whistles, knobs & buttons, try the CCrane web site;
they have about the best selection of better am-fm's that I've seen.
Not cheap, tho'

I have to agree. It's one thing to add a band,
like FM when it came along, but quite another
to simply replace one mode with another within
a band.

It's no accident that the time limit for the television
stations to stop broadcasting the old analog
methods got extended; people simply weren't
lining up for the digital televisions.

The NAB didn't want a new band for DAB because everyone would have had
an equal signal and the entrenched powerhouses would have lost their
signal advantage. So instead, they get 300 new SDARS stations to
compete with in every market. Brilliant.

>interference?

It does not sound like CD unless you own bad CDs. To claim to be CD quality you must follow the CD Red Book standard. That standard assures that the quality that goes in is the quality that comes out.

Digital FM requires the use of a codec which strips out portions of the input signal, so calling it CD quality is deceptive.

It does not improve coverage area because it uses only 1% of the analog power until the analog portion goes away. That won't happen for a very, very long time. The digital signal generally doesn't cover the same area as the analog signal.

It has been reported that the system is vulnerable to multipath and, of course, areas of weak signal strength, causing it to switch between analog and digital modes.

Yes.

Any suggestions under $50

Price is a good measure of quality in my experience. Stay away from
buds unless you are willing to control the sound carefully. Also
consider looking for a radio with a sleep timer.

Source record: 68177

Three that didn't make the cut

The radios I selected were inexpensive and easily found and still work after 10 years abuse and are pretty good at their niche. Three that I still use off and on but don't recommend as keepers are the DX-394, the DX 398, and the Zenith 3000.

DX 394. I got this one on sale at Radio Shack for $140 and couldn't turn it down. I use it as a bedside radio and it works ok but the modifications required to overcome the well-known engineering deficiencies are more than I want to get into. I removed the "chuffing" circuit (easy). Of course, it is not a portable.

DX-398. Art Bell was touting these in 90's as "awesome, incredible, the last radio you will ever have to buy" It was the biggest disappointment of any radio. At $200 it was not cheap like I usually get. Basically, its shortwave performance on the whip sucks. It has been desensitised for some reason and in my area is useless. I think they may have made it for the European market where signals are strong and overloading is a problem. It performs well on AM and FM and ironically I still use it to listen to Art Bell and Co.. I have the 18 pushbuttons lined up with various clear channel stations that carry Coast to Coast and as one station fades I punch up one that is still readable until it fades and so on. At least I didn't buy it from C.C.Crane so that is some consolation. The bail is very flimsy and has broken off (typical) and the battery cover is lightly fastened in place and falls off if you look at it sideways. I have put some Scotch Magic Tape as a hinge that holds the cover in place. It is too large to fit in the hand comfortably and should have a strap of some sort.

Zenith TransOceanic 3000. A fine radio and fun to play with but its too BIG and HEAVY. Weightlifters would like this model but I got tired of lugging it around and finding a place big enough to sit it. It looked good in those National Geographic ads on a sailboat surrounded by nautical types in dress whites so you can get a vicarious vibe from 1960. Sensitive, nicely bandspread, and easy to fix.

There are way too many lesser breeds that I won't mention

Zenith TransOceanic 3000.

I took into consideraton that there are three dipoles here, connected
to a single transmission line -- so hopefully each will be within
yelling distance, impedance wise, of 75 ohms, so there's no need for a
4-1 balun to a 50 ohm input.

Unless you want to transpose 75 ohms to about 20 ohms?

And if the antenna is less than a half-wavelength high at frequency,
on a fence so to speak, the impedance could be anywhere between 40 and
90 ohms, according to chap. 20 of the ARRL handbook. Still no need for
a 4-1 balun. Maybe a 1 to 1 choke balun, to sop up noise, but a 4-1?

What is it, this high religious SW fever for baluns in this group :-)

I can suggest some $10 headphones that I probably wouldn't wanna fall asleep on, but they are over the ear phones with seperate volume for each channel, a stereo/mono switch, and great SW radio listening quality.

The minuses are they seem to be built for the head of a child but they can be bent a tad fo fit bigger heads.

I stumbled across these at http://www.allelectronics.com

I'm not aware of an AM/FM only radio that will fit that bill. However for $60.00 or so a Degen DE1103 will cover AM and FM (in addition to SW), and has quite good audio out the speaker and through the headphones. And it is highly portable.

I really enjoy the sound on my S-350 but as far as a shortwave radio goes, you can do a lot better.

The Degen 1102 is a great portable and for the size I'd say the sound was excellent. But it is tinny compared to larger models. Pick your poison - I'd imagine the biggest portable you find generally will have the best sound.

In my case, aside from a VCR, a DVD player, an electronic camera and a DX
440, nearly all of my electronic devices are over 12 years old. But I'm
just one person, and as we've learned from these discussions, any one person
means nothing. Well, one person means nothing unless he can put something
after his name like "President and CEO" or "Chairman of the FCC".

Anyway, R-390s count more in considering the lifecycle of radios than other
electronic devices such as cellphones, personal computers and MP3 players.
Although all the other electronic devices may have a bright future in audio
entertainment.

What the hell is wrong with those Luddites, anyway? Thanks to digital
technology, people will be listening to what they want when they want!
Can't the Luddites see the newfangled digital threat poised at good 'ol Big
Radio? Why, the profits of our favorite networks may be diluted!!

Damn Luddites. They're never there when you need them.

GE SUPER RADIOS
a.. Speakers: 6.5-inch high-sensitivity woofer and 2-inch cone tweeter
a.. Reception: Tuned RF on AM and FM for long-range reception

Also sold by Radio Shack -- Optimus Brand as I recall

AM is super but analog tuning -- really pulls em in with its big ferriloop
antanna - great sound from the big speaker

FM is so so sensitivity & selectivity wise - No stereo speakers, but stereo
on earphones as I recall The SRIII is reported improved on FM

Try it you'll like it for $40 or so.

> history to someone with your poor posting history.

First, sorry to drag this thread on, but you still don't seem to get it.

Next, maybe you do need to justify your posting history as this is
really at the heart of the debate...

* you accused and chastised me (and others) of a "high number" of OT posts.

* 'Whatever' called your bluff, did some research and caught *you* with your pants down--*320* OT posts (while I have of 146 posts total, maybe 100 OT). That would seem to make *you* the winner of the "High Number" award, not others. Sort of like a guy with 320 traffic tickets calling a guy with 100 tickets a bad driver.

* When you accuse people of doing something wrong and then it comes to pass that *you* have done the same "wrong" thing almost *three* times as often, then, yes, you *should* justify your posting history or be exposed for the hypocrite you are.

As to your trying to justify your 320 OTs because you post on topic also--well, that's a little like a bank robber saying it's OK to rob banks because he gives some of the money to charity. NOT! OT is OT and your 320 trumps my 100. Period [.]

> so into the kill file with you.
>
> < Plonk >

Thought I was already there(!) but, please, do so again. It's getting too hard to follow your illogic, denials, dodging, weaseling and bogus "justification" of *YOUR* 320 OTs.

And pretty soon, somebody will have a radio with Tivo like features for
$39.95 that records several (or all of the available) stations and has
fast forward buttons so that no one will ever need to listen to a
commercial. And then what happens to your business?

> more people will be listening after IBOC is fully rolled out?

HD could, with HD2 channels, bring light users up in listening level.
However, since total radio cume has been so flat for decades, it is
unl,ikely it will increase reach. On the other hand, it reduces the appeal
of paid media significantly by doubling the FM offerings.

To be fair, there has always been about 5% to 6% that do not listen in a
week, and another 6% to 10% that listens very lightly.

Many of these non-users or light users are potential satellite users. 15% of
the US adult population is around 40,000,000 persons who don't much use
radio right now.

On the other hand, before changing to the Portable People Meter, the BBM in
Canada (the broadcaster owned ratings company there) a study was done to
show why that 5% did not listen and why the light listeners were light.

The 5% in Canada was made up of about half who did not use radio, period.
the other half did not use that week due to travel, a family emergency,
hospitalization, travel, etc. but usually did.

The light users were often people who only listened when they could, but
could not listen while commuting on public transportation, at work, etc., so
they listened avidly but less. The rest listened less because they did not
find what they wanted on the radio.

These figures have been pretty consistent for decades.

There is always a difference between theory and practical application. Theoretically it would be both because if you decrease the common mode noise on the emitting side and the receive side you will decrease the common mode coupling between them.

This situation is a little different from most peoples local RF noise problem where the noise generator is some device. There most people have had success clamping ferrite on the source cabling preventing the RFI from occurring to begin with seems to be the winning strategy. Muting the RFI source seems to work better I think because once the RFI is generated locally then it couples to all conductors in the area in a very insidious way, which goes around other blocking attempts.

The RFI noise prevention prevention requires you block near the source, which in this case would be at the pole. You cannot do this effectively.

Aren't those Tivoli or Kloss AM/FM radios suppose to have great sound?
They are still available.Do a google search for them.Basically
though,the bigger the speaker(s) the better the sound.But modern
technology,as far as some speakers are concerned,has come a long way
over the years.Check the stores in your area that have some radios on
display that you can listen to for a radio that sounds good to you.Let
your ears do the testing.

I have bought many old AM/FM/Shortwave radios at Goodwill before,and they all still work very good too,except for my old Sears Trav-Ler AM/FM/Shortwave radio and when it works,it works very,very good.It was worn out when I bought it at the Goodwill store.I can mess around with the worn out push buttons and the worn out on/off/volume controll switch for a few minutes and get it to working.When it does work,it is one of my best radios.

My Panasonic RF-2600 AM/FM/Shortwave radio,I bought that radio brand spanking new at a Service Merchandise store back in the 1980's,it has never and it never will see the inside or the outside of any thrift stores.Not as long as I live,it wont.

I gave an honest opinion/review of my Panasonic RF-2600 radio,I wish I had saved that money for something else.

Ad hominem aside, there has not been any significant usage of night skywave AM radio since TV took over as the provider of night time entertainment to America. Then, when FM took over the majority position in audience int he mid-70's, there was not enough AM listening at night to worry about even in the local home market.

Technical regulations based on now non-existent needs are arcane and antiquated. And other countries in this Hemisphere show that US spacing requirements are also unreasonable. AM radio regulation in the US is about 20 years behind the times.

But when did it die, gringa? Stop bullshitting, and back up your statement.

Also, gringa, please tell us why it's good practice to use three channels
instead of one.

> What is it, this high religious SW fever for baluns in this group :-)

It's a way to current terminate a coax so it is not completely (100%)
dependent on the the antenna impedance for the source termination.

You want to have lengths of the dipoles to be high impedance respective
to each other so the characteristic impedance of the sum says around the
72 to 50 ohm range. You would then want to then use a 1:1 BALUN.

I already told you. go back asd see the radio usage in the three yearss
following the lift of the freeze. Night radio died in less than 36 months.
>
> Also, gringa, please tell us why it's good practice to use three channels
> instead of one.

Because the others are not usable by the average listener. Mexico, and many other Hemisphere countries, license MW every 20 kHz in the local market.

BBC television SF show, back in the 70's. It used
to run on Nickelodeon back in the early 80's.

The production values were somewhat below
Dr. Who. (!)

The show focused on what (according to the
show) was the next evolution of humanity:
telepaths. Like Dr. Who, they had a series
of 5-6 episodes linked into a story. One
series of episodes dealt with our old buddy
Adolph not really being human at all, but
a galactic criminal.

It would be useful to hear from somebody in the area, but they are
probably rather pre-occupied at present.

However, given the extent of publicity regarding cyclone warning etc,
I would expect a reasonable level of awareness and capability to
receive HF services in the region - especially given that many rural
areas would have only marginal quality MF and FM reception.

Damn, another smart-arse spoiling a good story ;-))

He has no respect for anybody. The lives of a lot of people in Iraq and Afghanistan have been wasted, none the least of which are our sons and daughters killed or wounded in both wars. What a collossal shame! Our children will have an enormous debt now because of the money wasted as well.
Bush is no better than the muslims who blew themselves up or the mullahs who sent them in the name of their god. Bush thinks he is God's chosen one, right up there with Jesus and Moses. That makes him as sick as them. He is not acting in accordance with someone who is God's chosen that's for sure. I opposed this debacle from the beginning and I still oppose it. It was begun with lies, and all anyone in his administration can do is lie more, or smear shit over the facts hoping daffodils will come out of it.

The fact is, a pushbutton satellite war cannot be won when the combatants are involved in guerilla warfare and civil war: you can back out of such a situation or you can use nuclear weapons if all you believe in is force; if you have intelligence, you can negotiate a withdrawal or a cease fire and try to save face. But the final result is very likely to be exactly what happened in Palestine where terrorists are in power in the country. If Iran influences the future government in Iraq as much as I think they will, it is possible that Iraq will becomes part of Iran. I might be able to accept the idea that we needed a military presence in the middle east to protect the oil fields, but we can't even accept that as a premise: it was entirely a personal crusade of bush and his cronies with much wider and more sinister aims. It is revolting to think there are people in powerful places full of that much rot and corruption as has descended on us in the United States. I shudder to think what God might send to clean this up.

All life all holiness come from you O Lord

Hey, I voted for Kerry. He wasn't the brightest light on the christmas tree, but I believe he would have managed to extricate us from Iraq and possibly even contained the damage to manageable proportions. He probably would have balanced the budget too. Bush's brain has absolutely no connection with reality. The feds are going to ignore California until Sacramento gets flooded and thousands die because the water poured in too fast for them to get out or climb to the rooftops, and then Bush will smirk and say "we couldn't have known".

Two words: bird flu. Pandemics spread much faster than people have the
ability to keep up with, and the people in power would be dying before
they had a chance to board private jets for their private islands.

Thank you for an eloquent and thoughtful respond. Just wait till hear from the vile Goobers that will reply in no time now (most of them are already in my kill file); you should treat them with dismissive neglect, just as you treat a barking dog in the street.
"Verstaldin" <nope@spam.com> wrote in message news:dvsnvu01pep@enews1.newsguy.com...
He has no respect for anybody. The lives of a lot of people in Iraq and Afghanistan have been wasted, none the least of which are our sons and daughters killed or wounded in both wars. What a collossal shame! Our children will have an enormous debt now because of the money wasted as well.
Bush is no better than the muslims who blew themselves up or the mullahs who sent them in the name of their god. Bush thinks he is God's chosen one, right up there with Jesus and Moses. That makes him as sick as them. He is not acting in accordance with someone who is God's chosen that's for sure. I opposed this debacle from the beginning and I still oppose it. It was begun with lies, and all anyone in his administration can do is lie more, or smear shit over the facts hoping daffodils will come out of it.

The fact is, a pushbutton satellite war cannot be won when the combatants are involved in guerilla warfare and civil war: you can back out of such a situation or you can use nuclear weapons if all you believe in is force; if you have intelligence, you can negotiate a withdrawal or a cease fire and try to save face. But the final result is very likely to be exactly what happened in Palestine where terrorists are in power in the country. If Iran influences the future government in Iraq as much as I think they will, it is possible that Iraq will becomes part of Iran. I might be able to accept the idea that we needed a military presence in the middle east to protect the oil fields, but we can't even accept that as a premise: it was entirely a personal crusade of bush and his cronies with much wider and more sinister aims. It is revolting to think there are people in powerful places full of that much rot and corruption as has descended on us in the United States. I shudder to think what God might send to clean this up.

Well, when he says (paraphrasing) that future president(s) will be the
ones to bring the boys (and girls) home, he basically is indicating
someone else will have to clean up the mess he leaves behind.

Of course, that applies not just to Iraq, but to deficits, employment,
environmental destruction, Katrina, global warming, homeland security
and just about every other area he's screwed up.

Gosh, only two years, ten months to go in the Bush era.

What do Republicans brag about, nowadays, in regard to Bush?

If you want to discuss, cut out the stupid efforts to offend. They are
merely distractions.

What it has to do with the USA is that the AM rules were mostly written in
the 30's when night AM reception was where most tune-ins occured. Today,
most AM listening is in daytime hours, on receivers that are musch more
selective. So the adjacent channel rules are simply 50 years out of date,
and do not reflect current analog technology or the use of radio.

> And what the hell does that have to
> do with QRMing two adjacent channels?

It is only objectionable if people have regular listening disturbed by it.
They don't.

Well, seeing as you mentioned it...

...is Bush any better than Saddam?

Follow this just for a moment...

* Originally went to war because of WMDs

* December '04-- *Official* Administration policy (to this day): NO WMDs

* Then the reason for the war changed to "We have to get rid of Saddam,
he's a bad guy, he killed tens of thousands of innocent Iraqis".

* Bush recently admitted that we (*he*) killed at least 30,000 innocent
Iraqis.

Please, how is that different than what he was blaming Saddam for?

Isn't a dead innocent Iraqi still dead, no matter who killed him?

(hint-it's a rhetorical question).

Well, looking at the way the feds have handled New Orleans, it probably
won't get rebuilt. I hope that if they decide not to rebuild Sacramento
that the feds pay the full cost of moving the state government
(Sacramento is the state capital) to another city.

The fact is that a local DJ in New York and his dealings with record
companies is not of much interest to anyone outside the listening audience
of that station.

As to the hearings, how many committee hearings are there that get
essentially no press coverage? The payola hearings were not of much interest
then, any mor ehtan they are today.
>
> With your poor judgement, I wouldn't trust you to cut my grass.

This is not judgment. This is fact. You, on the other hand, did not know
when Top 40 started, that it was not originally a rock 'n' roll format, and
that such stations had very tight regimented rotations and playlists.

I believe that a 'few minutes' is two, three, even four minutes. After that, we use numbers. My wondering was, just how can a tv set be off for ten minutes when it only turned OFF a few minutes ago. You knew how long the set was off when it came back to life. How can it be off longer than the distance back in time when it went out?

I can understand a set turning off ten minutes ago for a few minutes, but NOT the other way around.

In case anyone wonders, I AM considering getting a life.

The heavy cloud cover obstructed my DirecTV satellite signal for about ten minutes,it was off for about ten minutes a few minutes ago.My tv set and my DirecTV box was not actually turned off,it was the heavy cloud cover that completly obstructed the signal so my tv set through my DirecTV box and that was effectively "turned off".That's the best way I know how to explain it.It was just as though I had climed up on my roof and put a metal garbage can over my DirecTV satellite's dish and blocked the signal.I am not a satellite geek.

The sector of radio I am in has reported double digit growth in each of the
last 10 years, and should do the same this year. In fact, that same sector
has about 25% higher radio usage than "the rest" of the market.

> get "CD Quality".

I've heard samples and IMHO 48kbit isn't even "FM Quality". This will make for a rude awakening when a listener tunes in the HD station and it goes from FM Quality (when they listen to the analog signal) to Internet Quality (when the 48k stream kicks in).

>Audio quality is said to be rather good if the
> entire available 96 kilobits per second are used for a single
> channel - but most stations aren't operating that way.

Which is a pity. If they DID use all 96k on one completely un-optimoded (compressed to crap) digital stream than HD radio would earn the title "HD". With multicasting, listeners would turn their receivers back to analog for the higher fidelity signal and wonder why they blew an extra $200 for a radio capable of receiving a crap digital signal they'll never listen to. This assumes they CAN tune back to analog, pity if their stuck with 48kbit. I'd hate to work the returns desk in the car stereo department.

>A MAIN
> advantage of FM IBOC is that it rejects multipath signals better than

Except for some changes in the skywave protection rules and the breakdown of
the (useless) clears, the exiting rules are based on the 1934 ones. So the
source there, fella, is the FCC.

As to listening. I refer you to any library that has a full collection of
Broadcasting Yearbooks through the late 50's. All those show the usage of
radio, and one can see the post-lift of the freeze effect on night radio,
where in a matter of 30 months, night listening to radio declined to very
low levels. As to the later history of AM and night listening, Arbitron
started measuring in 1965 and you can track AM shares at night to the
present very tiny levels.

All this data is independently verifiable. But admitting that would be tough for you.

A consideration of Earth's magnetic vector will help us predict the affect on the radio bands.

In between the period of vector direction up and vector direction down we will have a short period of vector magnitude zero; during which Earth's cosmic radiation shield will vanish.

Only those short wave personalities whose listeners happen to be wearing protective tinfoil hats will have an audience which survives the conflagration.

So. for example, the Brother Stairs and the Rush Limbaugh programs should be among the few which survive the pole flip.

> decades ago.

Good engineering doesn't become outdated, it simply gets ignored.

Listeners are not irrelevant just because they may stand outside the 'market area'. It used to be that if a station was being interfered with, one could complain to the FCC and the interference would be cleared up. That seems to no longer be the case.

And what of portable radios, of which there are many millions? Many of these tend to have very wide IF bandpass (some don't even use IF stages anymore, and instead broadband amplify the signal), and will therefore be susceptible to cochannel interference from the station that the listener is trying to listen TO. Add to this that FM AFC will try to lock onto strong second or third adjacent channels that are spilling over because of IBOC. I know people living IN New York City that receive interference from IBOC stations on stations they regularly listen to. This is on both AM and FM IBOC.

This whole thing was ill thought-out, at best. It's as much a boondoggle (perhaps even moreso) than HDTV.. Most stations don't even run more than a meager percentage of HD programming, opting instead to run 720i on their main channel so that they can run extra programming to make more money.. I don't care what you or anyone else tries to say to blow smoke up my arse, 720i does NOT look as good as standard NTSC analog. HD does look nice, when you're in a signal area high enough to make use of it. Once you get outside of a large city, at least where I'm from, if you get far outside of Portland, digital is just not receivable. I'll take a bit of snow or a minor ghost over a nice blue screen any day, thank you.

And again, what about all the millions of portable televisions that DTV will positively make worthless overnight? Is the government going to give us all tiny convertor boxes so that we can still use those, too? For many, those portable sets represent a larger expenditure than their living room

televisions, just because of the difference in technology used to build them.

Maybe us Luddites just don't like the government, or a bunch of stuffed shirt pencil pushers, telling us what's good for us? Hmmmmm.

When will the U.S. Supreme Court tackle this one?
"Hate Crimes" is nonsense.
Its convicting based on the MOTIVE, not the crime.

Hate Crime Legislation is just one more example of "Politically Correct" legislation introduced by Liberals and one example of Liberal Double Standards.

What's the Double Standard? Just look at the above post. No Minority will ever be tried for a "Hate Crime".

Liberals are also in favor of Child Rape. They think its an "illness", not a crime. Look at the two recent cases where Liberal Judges refused to impose jail time for child rapests.

What's the double standard you ask?
If it was a man who raped two adult women, NOW and every other "Rights Group" would be all over it as would the mainstream media. Especially if the rapist was a WHITE MALE.

But Rape or Kill Children, thats OK with Liberals.

Where are the great Guardians of our legal system (The ACLU) on these topics? No where to be found...

Source record: 68270

Hi Don

IMO, this can only be one of two things.
1) Broken/Missing Ferrite Slug
2) Open wire in the coil itself.

2) should be easy enough to find and fix.

1) If the slug is broken, but the all pieces are still there, I have had success gluing the pieces back together VERY carefully using Crazy Glue. I did this on an R4B years ago and it worked great.
If you are able to glue the slug together, you must be VERY careful when you thread it back into the form.

If the slug is missing, you're probably SOL unless you get very lucky and find a replacement with the correct mu, diameter, threads and length.

One last thing that you might try (but your Kenwoood Service Center may already have).
In the States, Kenwood has two outlets that carry a lot of parts from discontinued products. Try Pacific Coast Parts or East Coast Parts. Maybe you'll get lucky with them. Here's the URLs

http://www.kenwoodparts.com/ (East Coast)

http://www.pacparts.com/ (Pacific Coast Parts)

Good Luck with your project
Paul

> you have a bit of time do a google search for Ashley and see what it gives you.

I have to agree with the sentiments expressed by 'The Old Bloke', Why
are you being so rude to Ashley?

I did the Google search thing.... all it has told me is that Ashley seems
to have spent many hours collating information on scanning, and writing
pages that are on Scan Australia. Oh, and he has also put a message or two
up on a Melbourne Music discussion board looking for a couple of people to
play live music with.

I see nothing wrong with any of these activities.

So the suggestion that a Google search was going to reveal the old bones
that are possibly hiding in Ashley's closet comes to nothing!

And finally a message to Ashley,
Keep enjoying your hobbies! Don't let these people that like throwing
stones get to you.

Signal to interference ratios are signal to interference ratios. When the unwanted signal starts to approach the strength of the wanted signal - things don't work. When the adjacent city's analog signal gets as strong as xx dB below the IBOC digital signals - bye bye HD. I don't know the ratio at which IBOC quits, but it might be around 10 or 15 dB. Could well be that IBOC would function in a degraded manner if the IBOC on the other side of the analog carrier is free from interference.

We'll certainly have real-world experience in the DC/Balitmore area wince there are a number of FM stations 200 kHz apart near the two cities. I understand that one pair was used in the IBOC field test and that the result "wasn't pretty". iBiquity's headquarters are between the two cities.

Not that this has anything to do with either magnetism or coriolis - but NEITHER of these factors affects the way your water goes down the drain. Watre is not magnetic, and coriolis acts on far too large a scale to affect small-scale circulation. The shape of the basin and any manual force one may exert on the fluid are virtually the only things that determine whether the imparted rotation is clockwise or counterclockwise. That's a fact.

Not entirely true. If the basin is perfectly symmetrical and the
water is allowed to dampen out all vortices from the filling process
(i.e. allowed to rest for a day or two) the Coriolis Effect does make
it drain counterclockwise. It works the same way all over the globe.

Doesn't water going down a drain form a vortice that spins clockwise in the
northern hemisphere and counter-clockwise in the southern hemisphere?

Well, a scrap R-1000 will have four of them. ;-)

If it's screwing things up now, you could probably just jumper over that
one section of the filter (C18, C19, T3) and retune.

It's a 1 MHz wide stagger tuned bandpass filter in the synthesizer.
It's probably not that critical, it's used to clean up after the mix of
the VFO and the second xtal controlled LO. (I had to tweek that part
of mine when it wouldn't lock on the higher MHz. A 100 MHz scope on the
provided test point to get the levels even across the range of the VFO).

Or figure out what resonates at 42.5 MHz with a 22 pF capacitor and
get that range of sub-mini adjustable inductor.

Bush previously said:

"Mission accomplished" and

"This will not be another Viet Nam quagmire"

So, does his recent speech mean his two statements above are no longer
true???

Another two years (or more) added to the 3 years already sure
doesn't seem like "mission accomplished" and at least FIVE years total
sure *does* seem like a quagmire.

Not only does the government hope you maintain your gullibility, their
counting on it...

dxAce and Telamon are right.(five Gold Stars for y'all) That's the way
it works in my bathtub too.Ships going from America to Europe have to
steer a slightly Southerly direction (I think it's Southerly,South is
always best) to get to their port(s) of destination.

BLOODY AMERICANS declare WAR on AUSTRALIA

Now US objects to bloody ad

March 24, 2006

A MAJOR conservative American lobby group is to unleash a campaign of protest against Australian tourism's "Where the bloody hell are you?" TV advertisements on US TV.

The controversial commercial made its US debut last night in front of 20 million American viewers.

But the influential American Family Association, which has more than 2 million members and leads campaigns against abortion and gay rights, was not amused.

The AFA was upset with the bikini-clad model Lara Bingle's use of "bloody" and "hell" in the advertisement's tagline.

AFA members are expected to bombard Tourism Australia with emails and phone calls in coming weeks - and to boycott Australia as a holiday destination.

"I just feel pretty sure the typical American family who is watching TV with their children and they're exposed to this ad are going to be upset," said AFA director of special projects Randy Sharp.

"I don't want my children to hear that phrase. It's a shocking phrase because we're not familiar with it.

"I guess they use it all the time in Australia, but it's a foreign language here, so I think it'll have a negative impact rather than positive."

The British dropped a ban on use of the word "bloody" after pressure from Australia, but Canadian authorities are unhappy with the portrayal of beer drinking.

The ad was launched in the US with a 30-second spot during Lost, which draws around 20 million US viewers a week.

It also aired on some of the US's most-watched cable TV channels.

Telegraph

I dont know what more we can do with these people
Condy turns up and says the USA has no greater friend
than Australia then they put this shit on us

>

Actually, the latest versions of TiVo and it's clones now are
starting to display popup advertisements when the user attempts to
fastforward through the commercials.

As a joke a few years ago, the Onion had a story about a court
decision that mandated advertising be viewed by the consumer. Less than
that was 'theft of service' on advertising supported content, and
criminal penalties could range from fines to maximum security
imprisonment.

Within weeks Ted Turner, in a speech before media types, said that
skipping commercials was criminal theft of service, and efforts were
underway to stop it.

With product placement, and CCU's new 'adlets,' just being two
methods, circumvention of listener's wishes to avoid the barrage of
advertising will become an industry unto itself.

SW, getting back onto the topic, is one of the very few media outlets
that isn't advertising supported, with limited exceptions, of course.
Shame that it's also going the way of the 50 gallon clears.

Steve gets an "A" in earth science. Add also to this that there is very
little to no Coriolis Effect as you approach the equator (was strange to
watch the water go straight down the drain when I visited southern Thailand
a few years ago)

HMMMM
Ashley's idea of Researching Freqs is to copy direct someone elses web
page, change a few things in an attept to make it look different and
then copyright it as his own work, then claim that he was driving all
over the country in a clapped out Genewhine SLR Torana, smoking weed and

drinking burbon while scanning for all the freqs he had on his web page

most of the info was so grossly out of date or completely wrong
He then came into aus.radio.scanner and claimed that his web page was
Australia best because he started the counter at 50,000 visitors
and even asked for comments about the site
when people started to indicate the errors on the page, what was Asley's
response, to attack everyone who pointed to any errors on his page
claiming that his info was the most accurate of all and we didn't know
anything about scanning etc...

Ashley is a fuckwit of the highest order

if you have a good look at the google search you should still find his
ramblings, it's quite funny some of it

The "Stealing Free Foxtel" is a real Gem

>Not entirely true. If the basin is perfectly symmetrical and the water is allowed to dampen out all vortices from the filling process (i.e. allowed to rest for a day or two) the Coriolis Effect does make it drain counterclockwise. It works the same way all over the globe. <

You'd be hard pressed to find any usual basin made by the hand of man with perfection enough to achieve what you describe.

There have been some scientifically controlled experiments along these lines to see if it worked - not so much because the effect of the Coriolis motion was in doubt, but because they wanted to see if they could design an experiment precisely enough to do the job. They did - but yes, it took several days, and a bunch of money - more than the value of your typical toilet or kitchen sink.

I still stand by my original statement. In small basins of imperfect design, it makes no significant difference at all. Coriolis is typically appreciable only on large scales where the local effect of the earth's rotation *relative to the scale of the motion of the fluid being acted upon* is large - like mesoscale (~100 miles in breadth) and larger. It also helps that air is far less massive than water. Oceanic currents respond far more to sea floor- and continental-shape than coriolis.

No, it doesn't. The coriolis effect at the scale described by dxAce is too small. This is one of those scientific myths that die REALLY hard.

No, the coriolis motion in the southern hemisphere *is* clockwise, as opposed to that north of the equator. *Still* only for large scale motion.

> then copyright it as his own work,

Curious, how do you copyright frequencies?? It doesn't matter where he got info from, the frequencies are the same anyways. If an agency exists on xxx.xxx Mhz then they exist there, regardless of who provided in the info. If I got a hold of the government frequency register and posted some agencies on a web site, then another person done the same thing then good on them, it is still the same info regardless where it came from.

Also, why the personal attacks on here?? NONE of us on here want to see it. Honestly the mentality of some people on here very closely resembles the behaviour of my 3 year old twins. It has become bleedingly obvious that some people truly lead miserable lives, trawling the net day and night finding things to whine about, and then ruining forums like this with their mindless, childlike banter....

HONESTLY - GROW UP - GET A LIFE - AND GET LOST WITH THE PERSONAL CRAP!!!

>http://www.npmoc.navy.mil/jtwc/satshots/sh1806sair.jpg <

This looks like a tropical cyclone in the s. hemisphere off the
northeast coast of Australia - is that right? Nice picture.

In any case, it is seen spinning clockwise at the surface, just what
one would expect s. of the equator. At higher altitudes, cloud
moisture is often seen spinning off in the anticyclonic direction
(direction opposite the spin of the surface cyclone) for it's
respective hemisphere - but that's because the outflow up high
represents a high pressure area (which is naturally anticyclonic) as
opposed to the surface low of the storm.

In addition to Kevs' response,

I too offered to update the information of Ash's website, citing current pages and links for new data. I got an earful of abuse from him for my efforts and the pages remained out of date with incorrect information on "Australias Best Scanning Website" for years. Stuff him.

Ashley also carries a mighty chip on his shoulder. He has an "H" amateur callsign. Most people think nothing of it and happily chat to other hams, not caring what their licence class is, but people don't talk to Ash because he is an idiot, and he blames it all on "H" call prejudice.

Since the upgrade to a Ham call, he has presumed to tell everyone else how it should be done. Enthusiasm is wonderful, but bringing bad Freebander (ie Pirate) habits with you and then blaming others for not respecting you on air is laughable.

THAT'S WHY!

Brad.

Well, that certainly makes sense in southern California. I've seen
stations go to Spanish language format in the past few years but not
lately that I have noticed. You expect this trend to continue or has it
settled down?

The scale does is not a factor of the Coriolis force. The magnitude of the force is constrained by latitude and speed of matter. It is a force stemming from the inertia of mass having a rotational spin placed on it by the motion of the earth so it affects all matter even the water in your sink.

If you don't believe me then you can do this experiment yourself. Fill a sink with water and after it is very still open the drain without disturbing which way the water spins down the drain. Do it a couple of times and you will notice a tendency for the water to spin clockwise.

> than coriolis.

If you stand by your original statement then you would be wrong. The
Corolis effect is small but real. The water is your sink or major storms
are affected by forces much stronger then the Corolis force so it does
not determine the way water and winds spin but it does determine a
tendency for them to spin. If you are careful that the water is
motionless you will see a tendency for it to spin in one direction going
down the drain.

while I tend to avoid speaking for others I will venture a guess here

If GHW BUsh had gone and finished off Saddam Iraq would be rebuilt by
now andlikely a peacefull plae or a total cesspool with us out of it by
now

> In Senior's book he said that he did NOT go into Iraq
> because if he did, "X,Y and Z" bad things would happen. And guess what?
> junior did invade and those bad things *did* happen.
which things you talkingabout?
> We are now at the
> point that we are screwed if we stay and screwed if we go... :-(
hardly we are screwed if we go, we hav laready won the main battle
Saddam is gone wshowing you can't reneg on agreemtns with the USA with
paying a serve price. reradless of the outcome inIraq we have that.
Bothing the insugent UBL can dop about that

wether ever leave behind a peacefull Iraq I don't know, I hope we will
and I supect that things may well go our way, we have only the possible
of wining the greater victory iof a ally in Iraq vs futher loss of life
for our armed forces to wager at this point

Cross-posted to: aus.radio.broadcast,rec.radio.shortwave,alt.radio.broadcasting

MIDTOWN, NEW YORK CITY
Thursday, 23 March 2006

I'm writing to you tonight from one of the world's biggest internet cafes, located on West 42nd Street, just around the corner from Times Square in New York City.

It's 9pm right now (1pm the next day in Sydney and Melbourne). I'm currently listening to the highly dramatic Talk Radio of WOR 710AM ("real" talk radio, NY's first AM station in HD Digital :) and 77 WABC (770AM).

I am most interested to study the Left-Right political divide of Talk Radio (a highly inflamed divide between liberals and conservatives) here in the States and am carrying a book about American Talk Radio Wars that I purchased at RMIT University in Melbourne last year.

Especially having listened to Los Angeles talk station KFI this morning, and WOR this evening, it is incredible the amount of hyperbole the announcers use here to get their point across.

A big news story here today was President Bush stressing the need to include "internet blogs" as a means of helping to get more "good news" about Iraq into the public sphere.

A nice little story was brought to my attention by a bloke I spoke with on the Long Island Rail Road, in between JFK Airport and New York Penn Station at Madison Square Garden. It's about a coyote captured yesterday in Central Park and is front page news on the cover of "metro", New York's version of Sydney and Melbourne's MX newspaper.

Page 2 of tonight's "metro" describes the Empire State Building as being lit tonight with yellow and white lights for the spring season. This monumental site greets you as soon as you leave Penn Station.

Gotta go. Must get back to Penn and get the train to Washington DC. In such a rush that my diet today has consisted of Doctor Pepper on my AA (American) flight to from LA to NY, plus 2 Cheeseburgers with excessive amounts of fancy ketchup at Seventh Avenue McDonald's.

Healthwise, Things can only get better though as it is easy to shop here. There's even a Kmart in the subway :)

Would love to write all night as I've been keeping notes and taking photos, but 80% of it is better kept for when I get back home to Australia.

Take care and I'll write again as time allows.

...From Justin (Backpacker Bearcave)

That's a weak argument. If it was valid, all a tinhorn despot would
need to do to insure total control would be to start a bullshit war
early in his presidency.

Job #1 is preserving the rule of law.

I work in markets ranging from San Juan, PR and NY and Miami to Houston,
Dallas, Phoenix and California. The listening levels for Hispanics are high,
and the average advertiser is becoming more aware that there is a huge
opportunity in the $1 Trillion Dollar US Hispanic market.

Most markets are close to saturation in Spanish language formats. The growth
is in Hispanic formats in Spanglish and English, like KXOL in LA. LA,
actually, has lost a half-dozen Spanish stations in the last few years,
including the two on 93.5, the two on 103.1, 1540, 1480, 900 and 1580.

Kenwood HF receiver, R-2000.

Good condition all functions are working, memory, etc.

Took this in trade wanting to fix it but don't have the time.
Problem when tuning receive is intermittent. Sorry I have no other
information.

$125+ $10 shipping.

You have no right to surrender liberties that millions have died to
preserve. That is treason.

''The great concern of the Founders was tyranny. After all, they had
just barely escaped the clutches of King George, who would have
happily drawn and quartered Thomas Jefferson, John Adams, or George
Mason if his Redcoats could have seized them during the American
Revolution. The last thing they wanted was a power-hungry president, a
domestic King George, to replace the English one. The Founders did not
trust men's natural inclinations.

As Berkin notes, the chief "truth" that guided the Founders was "that
men were corruptible and that power always corrupted." They believed
that "greed and lust for power ... were inquenchable in mortal men."
Although he was ordinarily known for his buoyant optimism, Franklin
observed during the debates that even with good fortune, the new
government might succeed for only a decade. Franklin warned of the
"inevitable decline" of the Republic "into a tyranny of one, a tyranny
of a few, or a tyranny of the majority."

Jefferson, who was ambassador to France, and Adams, the ambassador to
Britain, did not attend the Convention. But each shared this concern
over tyranny. For Jefferson, the chief concern was the "tyranny of
one." For Adams, the tyranny of the aristocracy, or the monied
classes, was the great risk.

Looking at today's politics, Berkin says: "The Founders would be appalled, perhaps the most, in that the president presents a program to the Congress, and the Congress is expected to argue over it. This is the tail wagging the dog. Their view was just the opposite - with the president executing [the policies proposed and approved] by Congress."

Yet most "modern Americans" assume the president is the leader, Berkin says. This was reflected in a comment this week on Washington's CBS-TV affiliate, where anchorman Todd McDermott said authoritatively, "On Inauguration Day, the president sets the path for America's future."

Franklin would hardly believe his ears.''

==========
Mï¿½nchner Neueste Nachrichten,

Tuesday, March 21, 1933

A Concentration Camp for Political Prisoners in the Dachau Area

In a statement to the press, Himmler, Munich's Chief of Police
announced:

On Wednesday the first concentration camp will be opened near
Dachau. It has a capacity of 5000 people. Here, all communist and-so far
as is necessary- Reichsbanner and Marxist officials, who endanger the
security of the state, will be assembled. In the long run, if government
administration is not to be very burdened, it is not possible to allow
individual communist officials to remain in court custody. On the other
hand, it is also not possible to allow these officials their freedom
again. Each time we have attempted this, the result was that they again
tried to agitate and organize. We have taken these measures without
concern for each pedantic objection encountered, in the conviction that
we act to calm the concerns of the nation's people, and in accordance
with their aims.

Himmler gave assurance that in each individual case, preventive
custody will not be maintained longer than necessary. It is obvious,
however, that the astonishingly large quantity of material evidence
seized will take a long time to be examined. This police will only be
delayed, if they are continually asked when this or that person in
preventive custody will be released. The incorrectness of rumors
frequently spread regarding the treatment of prisoners is shown by the
fact that for those prisoners who requested it, for example, Dr. Gerlich
and Frhr. v. Aretin, counseling by priests is supported and approved
without hesitation.

http://www.lazygranch.com/images/radio/lv_3.gif

I've been experimenting with some homebrew direction finding gear, namely loops and a Wellbrook amp. I have two loops, which for this discussion will be called large and small. The large loop is about 2ft on a side, and the small loop is about 1 ft on a side. The loops have a platform to hold a compass, plus a handle to hold the loop. The handles and compass platform are plastic. I use a magnifier over the compass to minimize error. The compass is your basic Silva (about $10 at REI).

The beacon is 374Khz, located in Livermore, Ca. It backs right up to hills on its east, which I'm sure adds nasty reflections.

The first measurement, point "1", is 2.4 miles from the beacon. I only had the large loop at the time I did that measurement. The null was very sharp.

I removed point "2" from the digram as the error was huge. I could not get a decent null. At the time, I wasn't sure if the loop was the problem, or the location. That was when I thought building a smaller loop for comparison would be a good idea.

I used both the large and small loops at point "3". The null was good with both loops, but clearly the smaller loop had less error.

At point 4, the large loop had a poor null, so I skipped the reading. The small loop had 1 degree error.

I found that using the radio in CW mode with a narrow CW filter made finding the null a bit easier.

Any ideas on how to improve the technique would be appreciated. The goal of this exercise is to locate a beacon that is in a location where deadly force is authorized, so I'll need accuracy from at least 10 miles away and probably not line of sight in all locations.

This was discussed on the Kenwood R-5000 Yahoo group. Some people put "grain of wheat" type bulbs, others replaced it with an LED and a resistor. (around 1k oHm).

It's just a bulb force fit into a rubber grommit, almost anything will do. You can experiment with bulbs that give you the proper brightness.

For example, I put a 12volt bulb I had lying around into it. It works, but is too dim on the dim setting for my taste. I don't like the S-meter on the R-5000, the pointer is too hard to read.

Otherwise, I think it's a great receviver.

Geoff.

A loop will not require a ground pane- in fact a local ground plane
(aircraft's conductive body) is what causes quadrantal error.
As long as your loop is well balanced, showing deep nulls, there should not
be a problem.
With my 7' rotatable shielded loop (shielding serving the purpose of
balance, no improvement in S/N) I can see over 20dB nulls on ground wave AM
stations during the day.

>The scale does is not a factor of the Coriolis force. The magnitude of the force is constrained by latitude and speed of matter. It is a force

stemming from the inertia of mass having a rotational spin placed on it

by the motion of the earth so it affects all matter even the water in your sink.<

The scale does not affect the apparent "force" - but the Coriolis effect is only significant with large scale circulation, mostly because the larger scale allows the time necessary for the earth's spin to have its apparent effect. For small containers under normal circumstances, it is still mathematically insignificant.

>If you don't believe me then you can do this experiment yourself. Fill a sink with water and after it is very still open the drain without disturbing which way the water spins down the drain. Do it a couple of times and you will notice a tendency for the water to spin clockwise. <

I have tried this. Unfortunately, I do not have a perfectly round sink, nor was I able to get a perfectly still pool (we have enough close truck traffic so that ripples can appear at most any time in a basin of water). The results were inconclusive - but the results bore on whether the system was perfect enough, not whether the Coriolis effect is real (it is). Besides all that, if the Coriolis effect were large, the rotation would show up fairly quickly even when the drain remained closed. The fact that it requires both a perfectly still pool and the added energy of a draining basin to make a showing says something about its magnitude.

One interesting fact about it that nobody grabs onto is that in the N. hemisphere, the Coriolis vector does not shift a wind to the left (counterclockwise) but rather to the right (Clockwise). It is the combination of the wind direction, its friction with the ground, the locations of the high and low pressure areas, and the Coriolis vector that determines rotation. Without the potential energy added to the system by the pressure gradient, even at medium scales the Coriolis vector would have a relatively small effect...and the effect would be clockwise (!).

I'm quite sure the null is better than the directional antenna

I have put some thought into the S-meter, i.e. detecting the null. It would be best to have
a meter on the AGC, but I don't have any radios with such a tap from the factory. If I use the radio in CW mode, I could measure the AC audio level, but the null is sharp enough that I trust my ear. That is, I look at the S-meter, but the audio null is just as good.

I was curious about the effect of the size of the loop, with the smaller loop being much better.

3007. (OT) US Now Printing Dollars In Secrecy.

Newsgroup: rec.radio.shortwave
Date: 2006-03-24 17:36:16 UTC
From: cuhulin@webtv.net

Middle isle at, www.rense.com
How much is todays US Dollar worth compared to the US Dollar in (the year I was born,November 5,1941,a day which will live in infamy) 1941?) I guess worthless to about ten cents.
Of course,adjusted for whatever,the price of a gallon of gasoline today is still a "bargain",or so some people would say.
www.jacksongasprices.com

I remember back in the 1940's,the price of a gallon of gasoline on those spinning and whirling gumball gas pumps (it was fun watching those old gas pumps doing their thing,like looking at the high roller gambling machines,it was) was less than twenty cents,I think.I am going to the food department at the Wal Mart store this afternoon.The gas gage in my raggity old 1978 Dodge van quit working.I reckon I better stop off at the Murphy USA gas station at the Wal Mart parking lot area and buy some "bargain basement priced" go go juice for my van.

It's funny how the left suddenly embraces the Constitution when before it
used to be a "living and breathing Constitution" that they could change at
will.

And Tivo, as a company is now (or soon to be) roadkill. First, the
cable set top box manufacturers are duplicating their boxes' functions.

And anybody but the brain dead will think twice or three times to buying
a box that requires a subscription, a phone line, and will snitch on
you about every time you did a rewind to get another look at a good
cleavage shot. And now this. They really needed to figure out who
their customers are.

I read an interesting fact that came out after the 1989 earthquake in
the San Francisco Bay area. The best stations for finding out emergency
information were the Spanish ones. Most of the English language stations
were so centralized and automated that they weren't able to provide any
useful service, but the Spanish ones still had local staff. Maybe
that's why Spanish Language radio is growing. It's still operating like
radio used to for the rest of us.

I have that same radio. All you do is this:

- Type in the current time using the number pad. Use the decimal button for the ":". So, for instance, 12:30 PM would be 12.31. Then you press the "Time 1/2" button and the time you pressed should lock in. Hope this helps. If you need more in-depth info, there is a Yacht Boy radio group on Yahoo Groups.

3019. Re: IBOC Article and bandwidth

Newsgroup: rec.radio.shortwave

Thank you for explaining the mysteries of modulation byproducts and bandwidth in a way that makes the truth clear for people who may not have had radio schooling. Instead of making it sound harder than it really is..

The saddest part of it all is that MOST of the digihash flamethrower noise is describing to the demodulator that no modulation is present for most audio frequencies.
Even if NO audio is present, the IBOC signal is still 45khz wide, describing each and every one of the possible audio passband frequencies as 0% modulation. Instead of just letting there BE no modulation, they've decided it's much better to have all these little subcarriers elaborately screaming "NO MODULATION AT 1200HZ!" "NO MODULATION AT 1201 HZ!", etc. It's like having a thousand people in a room screaming about nothing. In proper engineering, like with good manners, if you have nothing to say, you keep your mouth shut.

I'm in northern Ca and have stations on my car's presets that would
hardly pop up on the auto mode. Namely KDWN, KNX, and KFI. These
signals are stronger than many local stations at night.

Of course, IBOC will eventually make them unlistenable.

The K7RA Solar Update

SEATTLE, WA, Mar 24, 2006--There were no zero-sunspot days
over the past week. In fact, the average daily sunspot number was
a little more than double the previous week's numbers, rising by
more than 17 points to 33.4. This was a nice little uptick toward the
solar cycle minimum, coming with the start of spring in the Northern
Hemisphere. Unfortunately for HF operators, the average
geomagnetic numbers doubled as well. This and the associated
aurora were triggered by a solar wind stream that hit Earth starting
last Saturday, March 18. Maximal effects were felt the following
day, when the College A index--measured less than two degrees
latitude south of the Arctic Circle--rose to 51 on March 19.
Saturday's College A index was 39, but on Friday, March 17 it was
only 2--very quiet. The Planetary A index over those same days
was 3, 26 and 37, and the mid-latitude A index was 2, 15 and 24.

This weekend is the CQ World Wide WPX Contest (SSB), and
there shouldn't be any nasty surprises regarding propagation.
Predicted planetary A index for the next five days, March 24-28, is
12, 12, 10, 7 and 5.

For more information concerning propagation and an explanation of
the numbers used in this bulletin see the ARRL Technical
Information Service Propagation page. An archive of past bulletins
is on the ARRL Web site.

Sunspot numbers for March 16 through 22 were 22, 24, 27, 40, 33, 39 and 49, with
a mean of
33.4. The 10.7 cm flux was 72.4, 72, 72.4, 75.2, 76.9, 76.7, and 75.9, with a
mean of 74.5.
Estimated planetary A indices were 6, 3, 26, 37, 22, 13 and 10, with a mean of
16.7. Estimated
mid-latitude A indices were 4, 2, 15, 24, 14, 8 and 9, with a mean of 10.9.

Daba Zeta,

Finally! Current news about Arthur Winston, an African American, The Greatest Employee in American history, and probably anywhere in the universe!!

Well, after spending several hours this morning looking for current news about Arthur Winston, and convinced that there was a conspiracy to block the story, I finally contacted MARK LITTLE, a real decent white man at KFVS 12 television here in Mukilteo. I told him that I had checked Google and couldn't find anything current.

He then asked me to go back to Google which I did. then he told me to click on the word "news" That stopped me in my tracks. I had never even noticed the word before, but it was right in front of me. He then told me to search using the words "100 year old and work record" Voila! there it was. They have 102 stories about this fellow and many of them are from the last couple of days as I had hoped. So I thanked Mark profusely and told him he was a great man.

And I thought I knew everything about searching online... I learned something just now that will be a TREMENDOUS HELP in my information gathering for the list.

So there is no conspiracy theory here. I'm still not sure why I couldn't find the story just using google normally as I have done for years?

Thanks again Mark.

Jim,

Sorry to hear that your radio got damaged in shipment. The service
manual that I got on the net is not great but very readable.

New manual available at

http://www.partstore.com/PartNumberSearchResults.aspx?PartNumber=b51-3073-00

Paper reprints are available from:

http://www.w7fg.com/search.php?find=r-5000

http://www.manualman.com/catalog/news110.htm

Reviews of these companies at http://www.eham.net/reviews/products/5

Before taking your unit apart read some of the postings in the R-5000
Yahoo group. There are lots of tips and techniques for restoring these
radios. Things like battery replacement, the "dreaded dots", spare
parts, hum/noise removal and computer interfacing have been discussed
and archived in the files section.

The R-5000 is a great radio.
Wishing you success with your repairs - Roger

The difference between a 1' and 2' loop is almost incosequential. Of more
importance is the depth of the nulls (i.e. loop balance).

Your S meter IS connected to the AGC line- that is what it measures.

You're kidding! DW is reestablishing its North America service? Great! Looks like reason is starting to regain a foothold at at least one broadcaster. Now all we need is for the BBC to jump on board, although I think that they're "unofficially" already broadcasting to NAm. I hear Montsinery just fine here in California, and the BBC uses a US tx for the 0300 hour bc.

My s-meter is also a few bars on a LCD, which is why I thought being
able to read the voltage directly would be handy. Now that I think
about it, I can read the S-meter voltage through the serial port.

The difference between the 1ft and 2ft loop is a big deal in that the
smaller loop has deeper nulls and was much more accurate.

>>to use more bandwidth.

Oh, but it does matter. The choice if digital modulation and compression
change things.

For a given modulation method and compression scheme, what you say is
valid. More content means more mandwidth.

However, different modulation methods and compressions schemes result in
differing bandwidth requirements for the same amount of content.

If this isn't true, then PC modems would still be running at 1200 baud.

>>
>>There is more then one way to encode the analog world into digital and

>>analog. The only way DRM can sound better is to use more bandwidth than
>>analog.

You are completely ingoring compression and modulation methods.

Yes, converting analog to digital then back to analog will degrade the
analog signal. A straight wire is always better. However AM, radio is
not a straight wire. With AM radio, an analog signal is compressed, band
width limited, converted to electromagnetic waves, mixed with any other
waves on the same frequency between transmitter and receiver, converted
to an electrical signal, passed through an IF that further bandwidth
limits the signal, and then run through a detector that usually adds at
least 1% distortion.

>>
>>So there are are two basic concepts for anyone reading the news group.
>>DRM and IBOC claims are a bunch of BS. Analog or any digital system
>>will sound better the more bandwidth you use.

I can compress audio to a 64 kbps data rate for an iPod. This sounds
better than _any_ AM broadcast I have ever heard. Better signal to
noise, lower distortion, better audio bandwidth and stereo.

I've also heard FM band IBOC, and I will say that it did sound better
than the analog channel. However this may have been due to significant
amounts of signal processing at one end of the chain or the other.

>>
>>--
>>Telamon
>>Ventura, California
>
>

(And no, I have no desire for IBOC on the AM broadcast band. I think there are too many associated issues, the primary one being the consumption of 30 kHz bandwidth. IBOC on FM may work and be viable in the long run.

I am in favor of DRM.)

OK, I admit that yes, there aren't separate sideband carriers for each frequency, and I do know better. IF you are listening to AM BC on a high fidelity wideband receiver, the IBOC splatter is 45kHz wide, even though the bands only extend 30 Khz. But compression and Fourier transform equations mathematically proving audio response to any given frequency response glosses over the fact that you are no longer sending the *whole* waveform, and only plotting points on the curve. Taking the simple CD audio example, if we sample at a 44 khz rate, we can only measure a 22 khz sinewave twice per cycle. Is the intended waveform to be reproduced a sine wave, sawtooth, or what? We can't tell anymore, because we have not measured enough points on the wavefrom. Did we measure the wave at maximum peak, somewhere in the middle, or as it was crossing the zero line? We have to assume if it's audio that it's a sinewave, but this ignores the non-sinusoidal characteristics of real-life audio. This is why CDs (assuming the original audio exceeded 22 khz) end up sounding like they all got recorded through one particular make and model of microphone. A very good microphone, but one that added its own characteristics to the result. Just the same as taking a large-format negative photograph which could be blown up to billboard size with good resolution loses all that resolution when reproduced in a magazine with an 80, 135 or 175 line screen reproduction. All those dots, small as they may be, don't add up to as much information as there was with the billions of little silver halide grains in the original negative. I was trained as a radio engineer, and decided NOT to work in the business back in 1982, as I saw this train wreck coming. Not to mention the removal of variety from programming, limited playlists, etc. The real reason radio must be digitized is that radio is an ART, and art is not understood by accountants. Art always cost money, so it must be turned into a commodity to turn a profit. Too many people could not grasp the art, tune the antenna, calculate complex impedances on a Smith chart, etc. They should have gotten out of the business if they could not understand RF. The same thing happened with cars. For all the digitalization of engine controls, what we got was technicians who plug in a computer to tell them what's wrong. In the 70's and 80's its equivalent was mechanics who sprayed new parts at a problem until it went away, perhaps never knowing or caring where the true problem had been. Before that, you had mechanics who UNDERSTOOD how it all worked, what made it work, and why it was founded in the laws of physics. If you have current flowing in the primary circuit, and the points opened, and the condenser was good, you would have a collapsing magnetic field within the coil, and the secondary circuit would have a SPARK! It was necessary for a distributor to point to the right wire, etc for the engine to run , among other things, but the laws of physics always

worked.
It was comforting to know the parts did what they did inherently, without a central processor.
I have a lot more faith in the laws of physics than I have in computers, and analogy of making a silk purse out of a pig's ear is very apt for IBOC. Noisiest ol' pig's ear I've ever heard. Sure as heck ain't radio.

There is no theoretical reason why a 1' loop would have any different nulls
than a 2' or 10' loop (at the freqs we are discussing).
If the nulls are deeper than there is a balance problem with the 2' loop.

I agree- LCD (digital) S meters are of little value here.

I suppose the larger loop can couple to my body easier than the smaller loop, though technically my body is in the null of the loop. Come to think of it, my body would be very "near field", so that probably isn't true.

The right IS fiscally conservative. Too many RINOs in Congress, and
Bush should know that tossing money at liberals won't stop them
hating him.

Telamon,

"It's a way to current terminate a coax so it is not
completely (100%) dependent on the the antenna
impedance for the source termination."

That is an interesting concept :o)

So besides de-coupling the Coax Cable from the Antenna.

The Coax-Side of the Balun provides a more uniform
and consistant Termination Load {Impedance} at the
Antenna-End of the Coax Cable.

Therefore - Making the Coax Cable more of a Feed-in-Line
and less 'part-or-the-antenna'.

One reason newer PC modems have higher baud rate it that they use more
bandwidth than the old ones did.

I'm sorry but there is a direct correlation between bandwidth and
information that can not be changed. Compression methods are not some
kind of black magic that can stuff more information in the same number
of bits. Compression methods can cause a digitized description of analog
information to be more efficient and some methods are better than others
but that is it. An example would be a picture of a checker board could
be described with fewer bits because there is not that much information
but change that to a wide view of scenery where every bit is more random
and it can't be compressed to any extent. Compression can not cause a
better "digital description" using the same bandwidth to occur as analog
representation of the same.

To be abundantly clear here my point is that DRM can not sound better
than analog in the same bandwidth.

> >>There is more then one way to encode the analog world into digital and

> amounts of signal processing at one end of the chain or the other.

Music from an Ipod is not short wave analog or DRM.

The point of my post is to dispel the notion that DRM can sound better
in the same bandwidth space as an analog signal and the basic theory
behind the reasoning, it can not regardless of the compression
algorithms and modulation scheme.

> (And no, I have no desire for IBOC on the AM broadcast band. I think
> there are too many associated issues, the primary one being the

It's possible to install an optical encoder but IMO, not worth the effort. The mechanical encoder will last longer if you take it apart, thoroughly clean the wheel/contacts and relube it with a synthetic grease. I did this on a new encoder and it's lasted more than three years so far. It has to be done before the encoder starts acting up.

BTW- Have you tried the new encoder with a metal shaft? It's supposed to be more reliable. What model year is your R8B?

"A loop will not require a ground pane- in fact a local ground plane (aircraft's conductive body) is what causes quadrantal error. "

True, but an aircraft unit, anticipating a QE, already has a certain amount of error built in, so even without a groundplane, the antenna would still need to be swung to check for correct bearings. The beauty of the system is that it does not rely on the interpretation of nulls or S meter readings. It simply points directly to the station.

I cannot but think a GPS might be more accurate somehow!

Brad.

By your method, an unmodulated AM carrier would be 15 kHz wide. By your method, using a tuner with a narrower bandwidth would result in a narrower signal.

If your choice of measuring tool can give different results something is wrong. The receiver cannot change the amount of spectrum a signal occupies, that is determined at the transmitting end.

IBOC uses 30 kHz, using your radio, you only perceive 45 kHz.

But compression and Fourier

I suggest that you read the whole thread before you post critical
remarks.

Post 17 Mar 22 11:46 am
"The radios I selected were INEXPENSIVE (emphasis added) and pretty
good at their niche."

This group receives many inquiries from beginners who don't have a
lot of money to spend and who are interested in inexpensive (there's
that word again) radios to try out the hobby. In my introduction I
always try to indicate the people who might be interested in the post.
Obviously, those who have a Bellwhistle 7000 (that being the price)
will not be interested but I think newcomers should be encouraged. The
group also receives a number of help requsts from owners whose
expensive radios have broken down. I stand
by my list of beginner's radios, some of which are still on the market,
and others easily available. They are inexpensive, represent good
value, are trouble-free with some having been in service for ten
trouble-free years. Economics state that you always get the cheapest
thing that will do the job. All the rest is ego.

Now that you are cringing in abject humiliation, I suggest that you
help out 5 newcomers to atone for your sin of rush to judgement.

3107. Re: Replacing Drake R8B mechanical encoder with optical

Newsgroup: rec.radio.shortwave
Date: 2006-03-25 17:35:00 UTC
From: Pete KE9OA <p.gianako@comcast.net>
Message-ID: <MJqdne3Wq-zc4rjZRVn-rg@comcast.com>
Source record: 68598

The optical encoders that I have seen on some of the Kenwood stuff is basically junk....nothing more than a flimsily attached acetate wheel. Now, if you purchase a good Bourns, Oak-Grisby, or Grayhill encoder it will last many years or even decades. Figure about 30 to 100 dollars for a good encoder.
In order to pull this off, you need to remove the pullup resistors from the input lines to the uP. Next, you need to connect a 5VDC source to the power connection on the optical encoder, and also remove any steering diodes from the A and B channel lines. After this is done, connect the appropriate outputs of the encoder to the uP inputs and you are set to go.
Figure about an hour job.

Being a newcomer to SWL'ing, these are my entries:

1- RS DX-398, $100 paid for it, very good RX on a suspended 50' wire; I take this one to the Adirondacks.
2- Grundig S350, $0 paid for it (a gift), good sound, doesn't drift as mush as people say; I use this one on the porch.
3- Grundig FR200, $0 paid for it, decent sound, does the job; I take this one camping (no electricity).

Having a business to run I get only an hour or two per week to listen. They all have their purpose and the prices were right.

I updated the motherboard drivers yesterday and found the Nv Mixer included. It sits in the systray. It lets you adjust volume and has a graphic equalizer. If you pipe the sound from your receiver to the Line In connection on the sound card, you can get better sound from your receiver. It has a section for different types of sound presentation one of which is "old time radio". It is a hefty 35.1 mb download and it is for ASUS A7N8x VM 400 motherboard using Nforce . BUT, if you have something that can use those drivers, the Nv Mixer can be useful for sound quality with your HF (shortwave) receiver. FWIW

All life all holiness come from you O Lord

"false economy" is a term used to describe a cheap good that will not perform as required. The error lies in not specifying the exact perfomance required. Professionals determine exact performance specifications and make sure the item just meets those specs and no more. To go beyond the requirements is a waste of scarce and limited resources. For example, there is no need to pay for sideband if it is not required. Similarly, shoddy parts and workmanship would cause an item to fail before its specified service life of, say, 20 years.
The phrase, "use the cheapest thing that will do the job" implies that one has given much thought as to exactly what the job is. Look around at all the tall buildings in town. Architects and structural engineers have designed them to be just strong enough to meet specifications. If they overdesigned them, they would be replaced by engineers who came in with a cheaper bid that still met specifications.
With reference to short-wave listening, a newcomer who just wanted to listen to the BBC, RCI, and The Power Hour would be quite happy with a Grundig S350 or even a Grundig Yacht Boy 206 for $25 from ebay. At least he has some evidence that the models on my list are not prone to break down. I am sure that some of the new Chinese radios represent good value but I have not had any first-hand experience with them and they have not been on the market long enough to determine their service life.
If people used "the cheapest thing that will do the job" principle in their own lives, they might find that, for example, a Hummer goes way beyond their needs and the resources freed up could be better used in topping up a retirement fund or paying off debt. But that takes me off topic.

Well, since the phone line is the medium that the information goes
through that is true but older modems did not use all that was
available and the newer transmission schemes used more of that
available bandwidth.

> My point is that it is possible for DRM to be an improvement.

Point not taken. Sure it is possible for DRM to sound better than analog for similar reasons analog can sound better than DRM.

The underlying concept is a higher information rate translates to a higher quality picture or sound in real time.

Just so my point in posting originally is not lost DRM started out and still tries to claim it is an improvement over analog. This claim of being "better" was to use the same spectral space. This is an incorrect notion, period. It does not matter what the modulation mode, compression or combination of compression algorithms are used, bandwidth determines the amount of information can be transmitted over time. If DRM is to sound "better" then a current analog signal it must occupy more bandwidth than the analog signal so more information can be transmitted over time.

If the analog information you want to transmit is low detail and quality to start out with a compression scheme can give the "appearance" that more information is being transmitted over time but it is not. With compression it is possible to transmit low quality at a higher rate or say two low quality streams at the same rate but this is not the same thing as a higher data rate being transmitted. Digitization and compression can give you more options trading off quality and quantity but it can not magically stuff a higher data rate of information in the same bandwidth.

This is basic information transmission theory. Look it up.

The important thing to remember is he was always here, in us.

There is a show on KFI 640 AM the "Jesus Christ show" 6 to 9 AM Sundays where the host plays being the "holy host." Interesting concept is what would Christ say to you today if you spoke to him as when he was a human walking on this earth 2 K years ago.

You can even get an pod cast of the past show if you are interested. At the shows worst it sounds like a Laura Schlessinger but at its best it covers theology questions and I've found it very interesting.

Anyway the tag line is "remember, I am with you always."

Handy post Ace. I'm printing this out so I don't need to have the
computer turned on to read it.

You can get pillow speakers at Target stores, and probably also at the usual-suspect electronics stores in the U.S., Radio Shack, Best Buy, Hi-Fi Buys, Circuit City, etc. YOu can probably even get them, probably even slightly better ones, from places like C. Crane, Universal Radio, and Grove Enterprises.

I live alone, so it doesn't matter if the radio is sitting on the table beside the bed playing through its own speaker system. I pretty much keep something on and playing all the time when I'm at home, either a radio of some sort, or the TV tuned to one of the better news, information, scientific, or historical content channels among the digital cable channels. If it is the TV that is on, the sound is also brought into the bedroom via a pair of Advent powered speakers connected to the stereo receiver in the living room via the wireless FM transmitter that was part of the Advent speaker system.

I usually listen to different radios, one for a while, then roatate it out in favor of another to have the spot on the bedside table. The one there at the moment is the Panasonic RFB-600. My bedside radio can not be an HF-only model, it must be cable of at least receiving the local FM offerings as well.

a little sprint cleaning is in order !
SPR-4 that works fine but doesn't look that great.... works off included DC cord for 12V operation. a good chance to get a cheap SPR-4 for someone that doesn't want to pay $300 and up for a nice one or needs a working chassis !
email me for pics !

The primary reasons I never got a TiVo.

And now this. They really needed to figure out who
> their customers are.
>

Truth is: Most people don't care about the cost, the privacy
invasion, or even the use of the phone.

They care about features, and convenience. Which goes a long way to
explaining why TiVo boxes are being replaced with Cable boxes with TiVo
features. Many of which are actually TiVo boxes in cable clothing.

Once you have on, and I have had them since the first year... something like
7 or 8 years ago... and could not lieve without one. I hve three different
ones in the house.

I have a cable "equivalent" at my weekned place. It is hateful in every
aspect (Time Warner) from the awful software to the remote control to the
highly inaccurate listings of upcoming progframs. I am swiutching to Direct
TV and a TIVO sometime this year when I can be there on a weekday to meet
the installer. A friend who moved to an apartment where he could not get
Direct TV had to use cable for a year. He said one of the main reasons for
mving was the awful cable implementation of its TiVo rip-off.

I was thinking maybe I can find some coax that will fit tightly in
copper pipe so that I could use a shield. Do you think that would help
the null?

The reason I need copper pipe is that I need the construction to be
very rigid so that I can accurately align the compass to the loop.

Wanna bet that by B06 or A07 that BBCWS for the Americas will be
eliminated entirely? I think that the suits running the Beeb should be
put out to pasture on the funny farm. Same thing for the commercial
radio moguls running IBB. The thing is, the US govt could revive VOA if
it really wanted to. Is ANYBODY from the UK govt in control at the BBC?
The BBC was trashing the invasion of Iraq as British troops were
fighting on the ground. The BBC recently has made some moves in domestic
broadcasting that have angered a lot of British, yet nobody is taking
responsibility, no heads are rolling. Is the BBC a govt agency or isn't
it? Is anybody manning the store?

No, they put him in a cell and played "It's Hard Out Here For A Pimp"
over and over.

Oh wait, if they're doing that, he must be in Gitmo, so he wouldn't be
filing any lawsuits.

Never mind.

Maybe you're right. American Idol contains secret messages that only he
can hear.

> an_old_friend wrote:

> which things you talkingabout?

Well, they should be intuitively obvious by just observing the way
things are going, but let me *quote* George H.W. Bush from his 1998 book:

[An invasion of Iraq] "will upset the long term balance of power".

"destabilization" [of the region]

"No viable exit strategy". [Sound familiar?--please see my previous
comment about 'screwed if we stay, screwed if we go' that you seemed to
disagree with]

"Had we gone the invasion route, the U.S. could still be an occupying
power in a bitterly hostile land". [Sound familiar?]

[An invasion of Iraq] "would have incurred incalculable human and
political costs".

My comment: Gee, "incalculable costs" like like 30,000 dead innocent
Iraqis, 2300 dead American kids, 19,000 mutilated American kids, the
undying hatred of the Muslim world for invading a sovereign Muslim
nation and the wasting of billions and billions of our dollars?

...and while we are on the subject of human costs, please explain why
Saddam was a bad guy for killing tens of thousands of innocent Iraqis
while Bush admits *he* killed 30,000 innocent Iraqis.

It sure looks to me like Bush Senior had a crystal ball (or at least a
hell of a lot more brains than junior).

Above Bush Senior quotes from:

"A World Transformed" by G. H. W. Bush, call number 327.73B, Chapter 19,
"After the Storm", pp 488-492. Read the rest of it for yourself.

That's what I've heard. But no, I will never have one. In fact, I
don't have cable, either. There's nothing I've found on TV that's worth
paying for. And I'm certainly not going to have a box in my house that
accesses my telephone line outside of my control in order to function.

I've heard that, too. I'm not a fan of cable, by any stretch,
especially around here. About the only thing they reliably provide is a
bill.

As far as the apartment and Direct TV is concerned...You might want to look at the FCC exemptions concerning small dish and over the air TV antennae...you may find that your friend cannot be denied small dish service by his/her apartment manglers. Condo dwellers are already exempted from restrictions.

3184. (OT) GOP Disease. for Dr. DaviD.

Newsgroup: rec.radio.shortwave

Ten Telltale Signs of GOP Disease

By Bob Burnett

You've probably seen the posters or read the pamphlets that warn of the telltale signs of sexually transmitted diseases.

You know, lovely symptoms like inflamed genitals.

There should be similar warnings about another epidemic threatening America--dreadful GOP disease.

As a public service, here are the ten telltale signs of Republican plague:

1. You keep lying, even when it's apparent to everyone that you're lying:

Insist that the situation in Iraq is not a civil war;

Bush tax cuts are good for the economy;

Republicans are fostering Democracy.

Repeat things that are not only untrue, but are absurd: George W. Bush cares about civil rights.

You can't stop;

you're sick;

you're a Republican.

2. No matter how bad things get, assert that President Bush is doing a great job.

Even when there are obvious screw-ups--the reaction to 9/11, the occupation of Iraq, and the response to Katrina--block all meaningful investigations, no matter how impartial.

Steadfastly maintain that Dubya knows what he's doing, even when it's apparent to most of the public that he not only doesn't have a plan to fix the problem, he doesn't get that there is a problem.

You're inflexible;

you're stuck;

you're a Republican.

3. Keep repeating that the situation in Iraq is getting better.

Say that you see the light at the end of the tunnel, even if there's no light and it's a bottomless pit.

Tell Americans that Iraqis want us there and our troops believe in their mission, even when polls say that Iraqis ask us to leave and our troops want to come home.

Insist that the press isn't reporting the good news, even when the only positive stories are those planted by your toadies.

You're strident;

you're in denial;

you're a Republican.

4. Don't accept any criticism, no matter how non-partisan or well intended.

Call your critics ignorant, devious, unwitting pawns of sinister forces.

Suggest that anyone who criticizes George Bush, Dick Cheney, or Don Rumsfeld is unpatriotic;

that they are aiding and abetting Al Qaeda.

You're relentless;

you're a fear-monger;

you're a Republican.

5. Stay on offense.

No matter what happens, keep pushing your agenda.

Remember Karl Rove's second commandment:

When in doubt, attack.

If one of your tactics is blocked, such as private social security accounts, immediately go to the next, reduction of entitlements.

Never let your enemies see you sweat.

Never forget that you owe your supporters, big.

You're aggressive;

you're ruthless;

you're a Republican.

6. Insist that you are pro-women and pro-family.

As "proof," periodically take the time to parade all the "babes" in the Bush Administration, Condoleezza Rice and Harriet Miers.

Then take action on every level to ensure that women remain second-class citizens and that American families get the shaft.

Insist that the state rather than a woman and her family should make private medical decisions.

You're macho;

you're sexist;

you're a Republican,

7. Tell everyone that you're the Party of peace, the Party that wants to spread democracy throughout the world.

Then create the largest peacetime standing army in US history.

Make sure that America spends more on defense than the entire rest of the world.

Relentlessly feed the military-industrial complex.

Prowl through the world planting US bases, supporting autocrats, and protecting the interests of multi-national corporations.

Preach peace and democracy; practice war and plutocracy.

You're predatory;

you're imperialist;

you're a Republican.

8. Maintain the economy is going great.

No matter how bad things get, how large the national debt, or how huge the gap between America's haves and have-nots, push for more tax cuts.

Insist that they're a panacea, a modern snake oil that will cure all ills. Keep promising America that good times are just ahead and the yellow-brick road is lined with tax cuts.

Talk equality and opportunity;

practice elitism and favoritism.

You're shameless;

you're greedy;

you're a Republican.

9. Manipulate the truth.

Whenever there is bad news, blame it on the press.

Accuse the mass media of distortion;

say they aren't telling the whole story.

Help them out, make up some good news.

Harass reporters at all your press conferences;

punish anyone who asks a tough question.

Support the illusion that Fox News is fair and balanced and that Rush Limbaugh and Bill O'Reilly are impartial commentators.

You're duplicitous;

you're biased;

you're a Republican.

10. Above all, never admit a mistake.

Remember Karl Rove's first commandment:

Never show weakness.

Adopt the motto: only wimps admit mistakes;

when the going gets tough, the tough attack their enemies.

Say the Bush Administration hasn't made mistakes;

it's set lofty goals that take hard, hard work to achieve.

Keep your eyes on the stars, your nose to grindstone and both hands protecting your ass.

You've no shame;

you've contracted an incurable disease;

you're a Republican.

Actually, Bush does not want to make them "Instant Americans" as you suggest.

BTW, he's supposed to make some statements tomorrow about the House Bill. It will be interesting to see what he says.

What's stupid (but typical of the Left), is the things that they are protesting aren't even mentioned in the Bill.

Read and Understand something? Think for themselves?
NEVER if you are a Liberal.

We have a problem. 14 Million "Undocumented Aliens" are in this country. Some pay taxes, Most don't.

We need to stop the flow into the country FIRST. The House Bill says just this.

We need to penalize employers who knowing hire "Undocumented Aliens" In order to do this, being here ILLEGALLY needs to be a CRIME. Right now, its a CIVIL offence, not a CRIMINAL offence. The House Bill says just this.

I do not believe the doing the above will hurt the economy one iota.

Finally, we need to let those who are here to work, to be able to do so and be able to track their whereabouts. This is the concept of a "work permit"

Those who are here to cause problems need to be rounded up and deported.

NOTHING I've said so far says we don't want immigrants, BUT THIS IS WHAT THE PRESS AND HILLARY CLINTON WOULD HAVE YOU BELIEVE

We just don't want, and can't afford, people who have no RIGHT to be here.

Illegal Immigrants are NOT U.S. citizens. They ARE NOT entitled to the BENFITS of being a citizen.

The people of California understood this several years ago and passed a law about it. The Ninth Circus Court THREW OUT the law that would have saved the people of California hundreds of millions of dollars a year.

People seem to forget, this is the United States. NOT Mexico.

Most illegals DO NOT want to be part of America. They don't want to be AMERICANS. All they want is a job (that pays cash), or a place to sell

drugs.

You liberals out there say "How can Paul make such an outragous statement?"

I say how many of you Liberals have ever been near the large Latino enclaves in Texas, Miami, New Mexico, Arizona or California? If you have, you know what I'm talking about.

These people REFUSE to learn English. They fly Mexican (or Cuban) flags everwhere.

We, The AMERICAN people, have to pay extra for English Second Language teachers in our schools. In Dallas, they have mandated that school principals have to speak Spanish or they are terminated. The Political Correctness has gotten so bad that DISD (Dallas Independant School Disctrict) actually wanted to HIRE UNDOCUMENTED ALIENS with college degrees (if there is such a thing!) so they could teach the non-English speaking kids in DISD schools in SPANISH!!!

In the Southern Border States, crime is increasing at alarming rates. If an illegal committs a crime, they just scamper across the border to safety.

Here in the Dallas area, 25% of the drivers on the orad have no license, registration or insurance. They run into your car and its your insurance that has to take care of you. If the "other guy" is drunk or someone is hurt, they will attempt to leave the scene. Its a fact. I know this first hand.

The Police are hamstrung because they can not charge an iilegal with a crime (most of the time), because of lack of identification. Yep. This is a fact. It becomes an INS problem, and we all know how effective INS is!

America used to be a country made of immigrants who were homologized into one country.

The illegals don't want this.

Paul

Thanks DxAce - you're right; when I listened till then end of the transmission, they id'd in spanish as Family Radio and I recognised their interval signal. They are not listed in my copy of Eibi frequency list.

All life all holiness come from you O Lord

Either stop illegal immigration, or start billing Mexico (and other Latin American countries) for their citizens using our medical care and other benefits.

Btw, I am fine with people coming here to work. But they need to be documented and tracked. However, do you really think it's only honest hard working Latinos coming through our Southern border? There is strong evidence that many Arabs and Chinese have come through the Mexican border as well...

There are lots of DVRs out there, including freeware software that runs on Linux boxes. (BTW, TiVo and Dish Network boxes are Linux boxes -- TiVo at one point was pretty open about how to get to the innards of their system.)

You don't have to be married to the cable/TiVo DVRs.

...and so it will also be with radio, if anyone cares enough at this point. I personally don't think they'll care any more -- specific program listening will come through podcasts, and word of new media will spread via web pages, usenet and other BBS-like systems.

When you can drop 100 hours onto a Flash card and put it in your portable MP3 player... no one cares or needs radio for entertainment any more.

We can get BBC WS on satellite and DAB here in the UK, as well as MW. At night, 0100 -0600 it also turns up on LW and FM. I'd rather listen to it on DAB than SW any day, although when on holiday, that's a different matter.

No it isn't - it's entirely separate from the Govt. It is paid for by our TV
licence - about 200 dollars per year, whether you watch any BBC at all.

The World Service is different from the rest of the BBC. It is not
paid for by the licence fee. It is an arm of the Foreign Service, I
think.

''How is BBC World Service funded?

BBC World Service is funded by a Parliamentary grant-in-aid,
administered by the Foreign and Commonwealth Office of the British
government. The FCO, in close consultation with World Service, is
involved in the process of deciding which languages are broadcast ,
but editorial control of the programmes rests entirely with BBC.
The relationship between the BBCWS and the FCO is governed by two
documents, the Broadcasting Agreement and the Financial Memorandum

Foreign and Commonwealth Office/BBC World Service - Broadcasting
Agreement

Foreign and Commonwealth Office/BBC - Financial Memorandum

The BBC's UK radio and TV services are financed by the television
Licence Fee (all owners of television sets in the UK are required to
buy an annual licence). The BBC also earns extra income through the
sale of programmes overseas and of books, videos, tapes and other
products linked to BBC programmes.
BBC World Service does not receive any funding from the UK Licence
Fee.''

Yes, the WS, unlike the rest of the BBC (you didn't make it clear you were referring solely to the WS as opposed to the BBC in general) is funded from the FCO out of our taxes, so we still pay for it. It's our money, not the Govt's money.

Running Dog asked if the BBC is a Govt agency, which it definitely is not. Your own post says:

"The FCO, in close consultation with World Service, is
involved in the process of deciding which languages are broadcast ,
but editorial control of the programmes rests *entirely* with BBC."

Indeed Sir, I was merely highlighting the range of options other than SW that are available. I enjoy HF as much as the next DXer, but the world moves on...

For example, when I was driving around Prague, I could listen to BBC WS on the car's FM radio. I suppose if the people at the BBC find out that only a handful of people listen to SW in Prague, they are better off sticking it onto FM, rather than pumping kilowatts of HF into the ether. Although that is not to say that all SW be dropped. If I was in a remote area, I would still like to receive it on SW, rather than getting a Worldspace RX and paying for it twice.

Some of us can actually do both! It's unfortunate that you've been unable to do
any real DXing on shortwave.

Come back and let us know when you find an appropriate satellite newsgroup to post
in, we'll throw a party.

Ah. You see, the VOA was (was, since it in effect doesn't exist anymore)
run by an agency of the US govt, USAID I think. In most countries, the
national broadcaster is a govt agency. Since the BBC is not controlled
by the UK govt, the BBC can make all sorts of screwy decisions and
nobody can tell them no. (In contrast, the screwy decisions made at the
VOA were done by presidential appointees. The President and Congress
could have decided to hire new people to run the place.) So the BBC
slashes the WS, they slash domestic programming, they make a lot of
people upset, and nobody can rein them in. At least the big corporate
broadcasters in the US (NBC, CBS, ABC, Fox, Time Warner (who runs the WB
network), Paramount Pictures (UPN)) have majority stockholders and
boards of directors who can fire the CEO if he fucks up.

How much do you pay for XM and Sirius? Isn't it something like $15-20/mo, in addition to a receiver that costs a few hundred bucks? Why should I pay $200 or so a year just to get the BBCWS, when I can buy a $50 Degen and listen to it without subscription costs? Even if I have to listen to it from the Asian stream, I still save money. Not all of us have gobs of cash. Even Ace, who has gobs of cash, prefers to spend his money in more productive ways than giving it to XM and Sirius. XM and Sirius are mostly music, 12 channels each of every variant of every type of music you can imagine. I don't listen to much music, and 12 channels of right wing talk doesn't appeal to me, so I'd be paying money to listen to something I can get for free with a $50 radio. I suppose David Rickets likes throwing money away. I can't afford to.

Dear Cuhulin,

Ha! You've obviously never tried one of these AOR AR7030s. I own a "Plus" version which also has several additional factory options. In almost fifty years of shortwave listening, this is positively the finest radio - in terms of construction, performance, and sound quality - I have ever seen, much less owned.

It may be small (it weighs less than five pounds) but its performance is positively amazing. Combine it with a good external antenna, of any type, and you have a DX machine which ranks right up there with the best. And that's no kidding!

Note that it is now in its eleventh year of manufacture; there are few, if any, shortwave radios that have had this kind of longevity. That alone ought to tell you something!

Best,

Joe

P.S. I hope you don't take this post as a criticism of you personally. I want you to know that I read your posts and have a great deal of respect for many of your opinions. Just not this one!!! ;-)

USAID is the US Agency for International Development. t helps farmers get
better crops, etc. The USIS, US Information Service, is what you are
thinking of.

VOA very much exists. It just is reducing its usage of SW and increasing in
other bands and media.

What has been screwed up at the VOA? They are simply moving into the new
centrury.

The radios start at $50 (or less, even). The initial subscription is
$13 a month (about the cost of one compact disc, which you will tire
of in a few hours).

I used to listen to the Singapore relay from around 3:30 AM until
around 7:30 AM (Pacific Time). Other than that, there's no BBC left
out here. On the satellite it's alway there, noise free, and I can
concentrate on the content.

Basically, they're focusing WAY too much on music services and not
enough on news, information, and the American way of life. The Russians
liked VOA because it gave them information about the outside world. VOA
today plays rap music. Most *Americans* don't like Eminem. I can only
imagine what the Muslims think of it.

I understand that you live in the Santa Clarita Valley. IIRC, that place
is horrible for radio reception. LA FM stations have to put up repeaters
to be heard there, and it's just a hop skip and jump away from downtown
LA. (OK, that's 2 hours in LA traffic, but I'm talking air distance.)
The mountains block virtually all radio signals. Try using your car
radio when going through Tejon Canyon sometime. It's DEAD. In your case,
satellite radio WOULD be a necessity. I can usually hear the Beeb's
Asian service for a few hours in the afternoon on the 15 Mhz band,
although I haven't tried it recently. I will have to see if the signal
lasts until The World Today comes on at 0300.

If you want to reach youth before their minds are made up, usinga
music-based setting is the only way. The VOA music formats, such as Sawa,
have plenty of news and commentary and US information, but are based on the
appeal of US music around the world. Talk programming will only reach people
who already favor the US point of view and will not reach younger people and
will not sway those over 35 or so who listen to talk programming.

Most Americans under 25 or 30 do like hip hop and US pop music. And the rest
of the world adores it.

Hello,

I have a real nice GE P990 that I'd like to fix up. The FM antenna came apart before I bought the radio and now I can't figure how to put it together. I have the mast, the spring and a part that presses against the ball by the spring. I just can't figure how it was hedl together.

Does anyone have one of these radios? Would you be willing to open it up and take a picture of the FM antenna set-up and publish it or send it to me?

The SW on this radio is great !

Thanks!

Randy

Try rec.antiques.radio+phono. That radio was made in the 60s and is much too old for discussion in this newsgroup. Occasionally people will discuss older tabletops like the Yaesu FRG-7, but since this group's focus is on listening, not collecting, most of the discussion centers on newer, digitally tuned portables such as Sangean, Grundig/Eton/Tecsun, and Degen.

3251. Drake SSR-1 Preselector Trouble

Newsgroup: rec.radio.shortwave
Date: 2006-03-27 03:06:51 UTC
From: Hal <hals1@sisna.com>
Message-ID: <Xns9792CC9CAFD64hals1sisnacom@209.210.176.62>
Source record: 68592

I have a 30+ year-old SSR-1 that's knocked around the world about. Anyway, the preselector usually doesn't have any effect excep[t it almost always wants to be fully clockwise.

Anybody else had this problem?

3252. Eton E-10

Newsgroup: rec.radio.shortwave

The S350 is is giant step backward in shortwave receivers. The Sony 7600
blows it away in technology and performance for the money.
And I still can't find the word 'inexpensive' in your original post. We are
seeing a lot of lower quality chinese knockoffs of late but (thankfully)
nothing at crude as the 350.

3254. REPORT: A new day for BBCWS listening

Newsgroup: rec.radio.shortwave
Date: 2006-03-27 03:28:36 UTC
From: running dogg <run@ning.dog>
Message-ID: <ANydnTK7To58xrrZRVn-pQ@comcast.com>
Source record: 68595

With BBCWS service to the Americas all but cut off, I decided to try the frequencies for East Asia and West Africa for reception of The World Today at 0300. The Asian frequencies are 15280, 17760 and 21660 and NONE of them were audible. 21660 was totally silent and 15280 and 17760 had occasional bits of signal popping up but nothing listenable. Then I tried the freqs for West Africa, listed as 6035 and 7160. 7160 had some sort of data transmission dominating the frequency, not surprising since this is a ham band in NAm. 6035 was actually quite listenable with occasional fading. I am in California, so the audibility of 6035 was a surprise. BBC website says this is from tx's in South Africa-quite a long way to go! Apparently 6035 is the best bet for evening audibility of The World Today. At 0400 this switches to 6005 out of Ascension which can sometimes be strong enough to spill over on to Cuba on 6000. Both 6035 and 7160 start at 0300. BBCWS does not broadcast from 0000 to 0300 in Africa-not surprising since it is the middle of the night there.

running dogg,

Thanks for the reply.

The GE is just one of my collection of 35+ SW radios, many of which are newer, digitally tuned ones you mention. Believe it or not, there are many people who still listen on older analog radios. I've been a SW listener since the mid 1960's and I've seen better days than now for the hobby.

I just thought that somebody else may have one of these radios and could help me out.

I've been to rec.antiques.radio+phono already, that was my first stop.

Well, I guess I'll just have to go back to listening on my FRG-7, a radio that I find better than any didgital radio I've owned so far...

Thanks again,

Randy

3259. 1000+ Members - Group for Radio Shack DX-394 Users

Newsgroup: rec.radio.shortwave

This group has the most complete collection of modifications, usage tips, links to related websites, documentation, and photos along with a user survey and a message forum (4000+ messages archived) to help you get the most
fun and DX out of your Realistic / Radio Shack DX-394, DX394, DX 394.

Over 90 mods and tips now listed plus a dozen on the To Do or Wish List. More mods than for any other general coverage receiver! Thoroughly documented with a Master Index. If you like to tinker with radios, I know of no other recent model that lends itself to as much fun in this arena as the DX-394. Great platform for learning radio-electronics. Always 1 or more FA on eBay.

Active & friendly user community now with over 1000 members. Some members are
keen short wave listeners; others are into AM DXing and a few enjoy long wave. Many experiment with antennas and some are ardent modifiers - customising and souping up the rig as hot rodders would do with cars. You'll find lots to interest you and help get the most out of your radio.

All here at:
http://groups.yahoo.com/group/�RADIOSHACKDX394/

Subscribe on line (for full access privileges to the extensive collection of Files, Photos and Links) or by email:
RADIOSHACKDX394-subscribe@yaho�ogroups.com (for message posting/receipt only).

well, i listen to BBC on 5.975 and it takes care of all my British
listening. they cover much of the world on their news.
I have a small portable radio shack dx-375 and i can get israel in
hebrew on 7.545 and russia on 7180 among other ones, such as the
netherlands. the airwaves are especially busy and clearer this
evening. it is a long time since i was able to get switzerland. 5960
sounds like tokyo at this time, but sometimes i think i got china there,
and i used to get turkey on 5960 as well as canada on 5960.
Do any Russia listeners know whether that is vladimir posen back on
voice of russia? remember he came over here during glastnos and the fall
of the soviets. I wonder if he went back because could swear that is his
voice now.

A few witnesses said a black government sedan ran him off the road. I suspect that was because Lawrence was putting the Arabs in a human light. The zionists in power needed to demonize them in order to make the upcoming land grab for the state of Israel easier.

> Reviews seem OK.

The Eton E10 iss a rebranded Tecsun PL-550. Have you seen this
review:
http://www.radiointel.com/review-pl550.htm

It would be helpful to know what you consider the positives and
negatives are for this radio. However, you should consider this radio
alongside other radios in this price range:

Grundig G4000A (aka YB400 PE) (US$100-150)
Kaito 1102, 1103 (US$70-100)
Eton E5, Sony ICF SW7600GR (US$120-150)

Purchasing via mailorder will allow you many more options.

Not sure if anyone's mentioned this but next year (2007) the U.S. goes
on a new schedule for Daylight Savings and Standard time.

DST begins
2.a.m. March 11, 2007

Standard Time begins
2 a.m. Nov. 4, 2007

I think it's a 5 year test to see how it works, then Congress will evaluate the results.

I bought the E-10 when it first came out but returned a week
later...Although it had good sound and the sensitivity was ok, it was
single conversion that made me return it...It had a IF shift button
that was suppose to help get rid of images, but it was a useless
feature that really didn't help much...
I picked up the 1103 instead and it will outperform the E-10 in just
about everyway...

I'm with David.
I've got a great EF-SWL outdoor antenna and an R8B to capture the "free" BBC SW. I've got every conceivable BBC frrequency programmed as a contiguous group on my R8B.

When I want to "listen for content" rather than "listen for DX catch," I try FM public radio first and XM second. FM public radio works every night midnight to 5 am local time, 2 pm to 3 pm weekdays local time, and 10 pm to 11 pm Mon, Tues, Wed, Thurs local time. All other times, I tune to XM.

Other things I enjoy on XM talk: CNN audio feed, CSPAN, XM's own "public radio" with Bob Edwards. That's it for my first month of XM. However, the BBC, clear and without static, makes it work $13 a month to me.

Randy,

Hi. No help here. Based on your post in the antique forum, I have the
exact same problem you have. It looks like there was some kind of lip
or a set of tangs around the bottom of the chrome insert that held the
spring at tension against the ball, but these just break off with time.
I have a p-1985a which is a cheaper later model, single whip, same design,
same problem. Ranks up there with the self-immolating plastic Crosley
used for the knobs and buttons on the O2CA, one of which is sitting
sad-looking in my hallway.

And that license fee is a tax by the government, just as a vehicle
registration fee is a tax by the government in the US.

Here in Seattle yesterday/Sunday, 15280 and/or 15360 provided a passable
signal (S1 - S3) from about 0:00 to 2:00. Later on in the year around
the summer solstice, 15360 often provides a resonable signal around
07:00-09:00.

>of The World Today.

But paths like that often depend on time of year and quit working, often
quite abruptly.

Spot check at 16:12 Monday morning show 7160 and 6195 coming in very
well. S6-S7. 9740's empty, though. I think they've moved that up
to the 11 MHz band. Time to download the charts.

I'm still usually getting BBC news in English at 0300z on 5975 khz.
Usually 25 db over s9 or better in upstate NY on a Sat800 with a good
external antenna. They were NOT heard last evening

That's because that transmission no longer exists.

Which of these mods do you think increase sensitivity at the expense of
dynamic range?

> Remember some of these mods are made by amateurs

Many of whom are electronics professionals. That's not to say that novices
at electronics do not carry out some mods. One of the virtues of the DX-394
is that it can be readily modified and doing so is a great educational
activity for someone getting into radio and electronics.

> The factory engineers designed the sensitivity for very good reasons

And made some mistakes in other areas, e.g., decoupling around the IF
filters, AGC time constant for SSB (factory corrected in the revised
versions), and some design trade-offs or decisions that owners want to
correct. That is true of every product.

Thus the point of my post, which it seems the two responses missed. As
of Monday March 27, the 0300 BBCWS broadcast on 5975 from the Delano tx
no longer exists. In fact, if you look at the BBCWS website you'll see
that all transmissions for Central and South America have ceased, and
the Caribbean is limited to four or five hours during the day local
time. Ace, have you tried the 6035 tx at 0300? It should come in even
better in Michigan.

CBC MW stations can be heard quite well in the northern states during nighttime. The further south you go the likelihood of hearing these stations decreases, since the range of a MW station at night is 1000 miles or so. I have NEVER heard a Canadian station here in Sacramento. I've heard Seattle, but not Canada. I'm closer to Mexico, but I wouldn't be able to tell a true Mexican station from a US domestic Spanish language one.

> the hobby.

The 60s and 70s were really the glory days for the hobby. You could tune in and hear the Cold War raging LIVE over your radio. Today our enemies use the internet. It's mostly in Arabic, and visiting the few sites in English on a regular basis could earn you a visit from the FBI, since the feds track all internet communication. Iran DOES have that Voice of Justice broadcast, but I've never heard it here in California with enough clarity to understand the words.

> I just thought that somebody else may have one of these radios and
> could help me out.

Actually, I inherited one from my grandfather. The antennas have the same problem-apparently the little clip or whatever breaks easily, and the antennas just pull right out. Gramps used his for FM listening only in his workshop (can you imagine spending $100 in 1964 for a radio that you'd use only for FM?) and when he was sick and giving everything away I asked him about the antennas and he shrugged and said it had always been like that, and he never used the SW portion anyway.

> I've been to rec.antiques.radio+phono already, that was my first stop.
>
> Well, I guess I'll just have to go back to listening on my FRG-7, a
> radio that I find better than any didgital radio I've owned so far...

The P990 looks like a difficult radio to tune. 6-18 Mc is crammed into a small space. I would think that the FRG-7 would be easier to tune, since the bandspread was deliberately spread out to make finding stations easier.

DaviD,

MESTIZO - A mixture of European and Native American
is NOT Indian and while most Mexicans would Claim
to have some Indian {Aztec} Blood; they would also
point out that they are not Indians {Los Indios} .
- - - The Mexican Cultural Identity is 'distinct' in that
they as a Nation see themselves as a Blend of Both
European and Native American Peoples and Cultures;
that is United by the Spanish Language.
- - - Where as the American (USA) Cultural Identity is
'distinct' in that we as a Nation see ourselves as a Blend
of Many European and 'other' Peoples and Cultures; that
is United by the English Language.
- - - Then again the Brazilian Cultural Identity is 'distinct'
in Latin America (South America) in that they as a Nation
see themselves as a Blend of European and African Peoples
and Cultures; that is United by the Portuguese Language.

as for me - i am just another "Heinz 57" American ~ RHF

I refer you to the Elecraft page
http://www.elecraft.com/K2_perf.htm

Sez
MDS = Minimum Discernible Signal (3db increase above noise floor). Larger
negative numbers are generally better, but too much sensitivity can reduce
strong signal dynamic range and Ip3. Pre-Amp On MDS numbers of -130 dBm or
more are more than adequate for most HF band operating, since band noise is
typically above this number. (Lower frequencies need less MDS (more +number)
due to an increase in atmospheric noise.)

Sharper Image is displaying this radio in their catalog and I am told it will be available in mid-April in the stores. Kchibo doesn't have it in their catalog, however. Does anyone know anything at all about it?

Description: Micro AM/FM Shortwave Radio is a feature-packed digital PLL auto-scan world tuner with 10 FM, 10 AM and 10 SW presets.
Receives shortwave frequencies from 5.90-17.55 MHz so you can keep in touch with news, weather, sports and propaganda from around the globe.
A keypad lets you enter any desired frequency instantly.
Telescoping 360° rotary antenna includes a wire extension cable for enhanced reception.
LCD alarm clock features dual alarm settings and a programmable sleep timer.

Price: $49.95

1 . Crystal figures show that time, frequency, work status clear.
2 . Will be able to receive FM (FM) / campus radio (SCH) / am (MW) /
short wave (SW) band programs.
3 . Toshiba used the latest import figures fi (PLL) processors receive
reliable, no frequency drift phenomenon.
4 . Taiwan has four electoral methods :
* 40 radio frequency computer memory preselection
* Automatic Search Radio
* manual search radio
* Direct Entry radio frequency
5 . Scanning storage functions located in the scanning stations at the
same time will automatically preserve sequentially from the radio
frequency.
6 . Digital clock and 10-100 minutes sleep automatically open
functions.
7 . Sub-band based short can quickly search shortwave radio.
8 . Two regularly switch on the machine functions for you at different
times or regularly listened to radio as alarm clocks.
9 . 1 function switch on the machine used regularly, located five
minutes Tanshui functions.
10 . Located monophonic, stereo sound, heavy bass, the three tones,
listening to the radio, the choice may be based on need.

11 . Located click lock switches to prevent Wucaozuo.
12 . With the hard disk to external antennas to increase the maximum weak radio reception capabilities.
13 . Based lighting light, convenient environment to operate in the dark.
14 . Cells use two sections 7, size : 108 x 62 x 21mm.
15 . Please Check up brochures

With products as a gift :
High stereo sound headphones - Voltage power Exquisite creature External hard disks days Line Handbags National Radio frequency table
Gifts dos, entertainment unlimited.

Technical indicators

1. Frequency range
FM (FM) 87-108 MHz
Campus radio (SCH) 70-87.5 MHz
Am (MW) 522-1620 Khz
Short-wave (SW) 5.90-18.00 MHz
2. Radio frequency memory number (40)
FM (FM) 10 SCH (campus radio) 10
MW (AM) 10 SW (shortwave) 10
3. Idea limited sensitivity
FM (FM) over 8uV
Campus radio (SCH) than 30uV
Am (MW) over 3mV/m
Short-wave (SW) than 30uV

4. Shan choose performance over 15dB signal
5. 3 volts DC power
7th cell batteries containing 2
3 volts 300mA power external hard disks
6. <200mA current maximum exertion
7. > 40mm machine loudspeakers within 12 0.5W @ Island
8. > 3.5mm headset external hard disk 32 @ Island
9. Size 108 x 62 x 21mm
10. Weight 115g (excluding batteries)

Missing 7000-9400. 13500-15100.

We will just have to disagree. I think that you should read the whole thread before making a critical post. For example, I wonder how you could make a critical post that had any merit on , say, the 272 posts on IBOC of Mar 2 2006 without carefully reading the whole thread.

There are some who agree with your opinion that the Grundig S350 is a poor radio. But not many. I would refer you to eham where the great majority of the 48 reviews were favourable.
<www.eham.net/reviews/detail/3112>. This review would also be of interest to S350 owners as some of the posts have operating tips and modifications.

I have no dispute with that. Rather with your first comment:

>>> Just FYI: I see a lot of these mods to increase sensitivity -- resulting
>>> in trashing the dynamic range
>>
>>
>> Which of these mods do you think increase sensitivity at the expense of
>> dynamic range?

You did not answer the question. The answer may well be 'none'. I'm not
aware of any aimed at increased sensitivity, unless adding an amplified
preselector counts as a mod. And that could arguably be for improved dynamic
range and sensitivity by improving front-end selectivity and noise figure.
Most regard the DX-394 as a very sensitive receiver that is outperformed in
that spec by few others. But itcould do with improved overload threshold and
IP3.

Methinks you might be trashing imagined mods rather than the ones
well-documented in the user group.

> The BBC in the car?

I borrowed a Sirius receiver from my employer for a holiday trip from Toronto to Myrtle Beach, South Carolina, a distance of some 1600 km (1000 miles) each way, roughly 35 hours on the road, and enjoyed listening alternately to CBC Radio One on Sirius 137 and BBCWS on Sirius 141. It was pretty much uninterrupted, except for the tunnels through the Blue Ridge Mountains. While the audio quality sucked at the low bitrates used, I was surprised at how much the distortion was masked by car noise and how accustomed I became.

Now to keep dxAce from complaining that this is not a posting about shortwave, I took my KA-1103 along with every intention of doing some SWL - never turned it on! Seems to me that alternatives to shortwave as a means of delivery are legitimate topics for rrs, since so many users of shortwave are migrating to other means of communication. ;-)

3336. Consider these AM/MW Antenna choices for better AM Medium Wave Radio Reception

Newsgroup: rec.radio.shortwave
Date: 2006-03-27 20:47:26 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1143492446.873778.126480@g10g2000cwb.googlegroups.com>
Source record: 68674

RD,

FWIW - The 'true' Mexican Radio Stations with have an "X",
which sounds like 'eck', as the first letter of their Call Signs.

I can generally pick-up CBK 540 kHz (SK) and CBU 690 kHz (BC)
from Canada for the "OverNight" International News Programming;
here in the Sierras north of Yosemite in the wee-hours of the mornings.

RADIO-ONE-CANADA=> http://tinyurl.com/3lse4

NOTE - That XETRA from Tijuana, BN, Mexico is also on 690 kHz
http://www.fcc.gov/fcc-bin/amq?state=&call=&arn=&city=&freq=690&fre2=690&type=0&facid=&cla
ss=&list=1&dist=&dlat2=&mlat2=&slat2=&NS=N&dlon2=&mlon2=&slon2=&EW=W&size=9

NOTE - Then there is another Mexican AM Radio Station
that appears on 540 kHz at night and seems to change
the program format frequently.
http://www.fcc.gov/fcc-bin/amq?state=&call=&arn=&city=&freq=540&fre2=540&type=0&facid=&cla
ss=&list=1&dist=&dlat2=&mlat2=&slat2=&NS=N&dlon2=&mlon2=&slon2=&EW=W&size=9

TIP - A One-Metre Box AM/MW Box Loop Antenna
plus a Grundig Satellit 800 Radio will pick-up most
of what I want to hear on the AM/MW Band up here
in Twain Harte, CA - USA.

IMHO - 55.5% of the AM/MW Radio Reception is using an
Antenna designed for AM Medium Wave reception. For most
AM/MW DXers a Two to Four Foot {Home Made} Loop Antenna
will greatly improve their AM/MW DXing Listening experience.

Consider these AM/MW Antenna choices for better
AM Medium Wave Radio Reception :

1 - Home-Made Box or Hula-Hoop Loop Antenna

2 - Select-A-Tenna used as a Random Wire {Longwire}
Antenna Tuner-Coupler with a good AM/MW Radio.

3 - CB / 10m Whip Antenna mounted on 21 Foot piece
of Top-Rail plus Active Antenna Pre-Amp on the Mast.

4 - 50-100 Foot High Tuned Wire Vertical Antenna
with a Tapped AM/MW Base Loading Coil
- - - Four Foot (4') of Six Inch (6") PVC Pipe with
400 Feet of # 14 AWG Stranded THNN Wire that is
wrapped at Five Turns-per-Inch (5 TPI) around it for

60 Turns (100 Feet of Wire) per Foot of Pipe.
The first 60 Turns function as the common primary
of the Matching Transformer and Loading Coil Tap # 1
The second 60 Turns is Middle Coil Tap #2 and the
third 120 Turns is the Top of the Coil Tap #3.
Note - The Bottom of the Loading Coil Tap #0 is
Grounded to a Ground Rod installed at the Base
of the Vertical Wire Antenna Element and the Coax
Cable Feed-in-Line is connected across Taps #0
and #1 with the Shield to Ground Tap #0.
Coil-Tuning-Adjustments : The Vertical Wire Antenna
Element is connected to the Top of the Coil Tap #3
and a Jumper is used to Short-Out Tap #3 to #2 and
Tap #3 to #2 for tuning broad ranges of the AM/MW
Band.
* Top-Tap #3 by itself = Lower AM/MW (LW?) Band
* Tap #3 Shorted to Tap #2 = Center AM/MW Band
* Tap #3 Shorted to Tap #1 = Higher AM/MW Band

5 - 300-500 Foot Long BOG Antenna pointed
in the direction of where you want to hear from.
BOG = Beverage-on-the-Ground Antenna

The DX-394 is a scanning receiver, reviews have described its user interface
as reflecting a scanner heritage, it has been a topic in all the newsgroups
to which I posted the notice, and similar notices have been crossposted a
few times in all these newsgroups informing potentially interested parties
about http://groups.yahoo.com/group/RADIOSHACKDX394/, without objection.

Are there any other newsgroups for which it would be relevant? The ones I
posted to are:
rec.radio.shortwave, alt.radio.scanner, alt.radio.scanner.uk,
rec.radio.amateur.equipment, rec.radio.amateur.homebrew

I don't want to join this group as I don't own this radio.
So I didn't read any of the mods
My FYI was a general info to be careful of mods having to do with
sensitivity.
Perhaps there are none for this radio as you pointed out.

I would feel much more comfortable if a modder would measure and present all
the receiver specs after the mod, one seldom sees that

So be careful, the mod you make - may or may not have been thoroughly
thought out and properly implemented

I double checked my statements with a friend who has designed receivers of
all types for many years and he concurs.

So be aware of what you are doing to the entire receiver specifications when
you make mod.

Case closed

Dear Hal,

Consider investigating/purchasing a Sony ICF-SW7600GR, a much better radio than the Eton E-10. The Sony is a dual-conversion receiver and features a synchronous detection circuit. Both of these features greatly improve the listening experience. The Sony's construction quality is first-rate. You probably would have to buy it mail-order (web or telephone), but there are many reputable dealers (AES, Universal, Amazon, J&R Music World, and others) from whom you can purchase it.

I have been disappointed with ALL THREE of the Sangean radios I own(ed). They have/had mediocre construction quality and their "computers" all failed early.

Best,

Joe

Aw come on - give the poor clerks a break - if they make minimum wage they are doing good.

Don't expect a $50/hour engineering response from a $5.15/hour clerk

Some of the stores here have college kids trying to get thru school. Some are interested in the merchandise and learn quickly -- others do not. Be polite and educate the clerks in a nice way if you are indeed knowledgeable yourself.

Radio Shack is a good place to buy things if you have done your homework and know what you want.

Some stores here have VERY knowledgeable clerks -- just do a little asking around and go there.

I bought my Pro-96 in a downtown Chicago RadioShack store - very helpful
clerks. They didn't have the beast in the store when I was to be in town
so one of the guys picked one up from another store on his way home and
had it for me in his store next day. Great service!

Cheers.

Ken

As I thought.

> My FYI was a general info to be careful of mods having to do with
> sensitivity.

OK and I concur with your general comment.

> Perhaps there are none for this radio as you pointed out.

That's about it - I've indexed over 90 and none of them are aimed at
increasing sensitivity. Several address overload mitigation.

> I would feel much more comfortable if a modder would measure and present
> all the receiver specs after the mod, one seldom sees that

Agreed. But not everyone is equipped to make these measurements. Many mods
are intuitively obvious and the subjective improvement is apparent even
though the absolute performance improvement is unmeasured.

> So be careful, the mod you make - may or may not have been thoroughly
> thought out and properly implemented

That's true. I have challenged mods, not included some in the Index or
qualified them with the potential side effects.

> I double checked my statements with a friend who has designed receivers of

>CBC MW stations can be heard quite well in the northern states during nighttime. The further south you go the likelihood of hearing these stations decreases, since the range of a MW station at night is 1000 miles or so.<

Huh? The skywave range is considerably longer than that! On a portable radio with a strung up 75-foot wire antenna in Massachusetts, I heard Salt Lake City & Texas (2,000 miles) on a regular basis all night, and on a couple of occasions Los Angeles (3,000 miles). I have easily heard Wyoming (~900 miles) here early summer mornings in the SF Bay area using my *car radio* - and I doubt that a strong Canadian station would take much more to get here than that one, especially if it could use the grayline as the kicker.

Bruce Jensen

Nothing is better than being 20 years old and spending
two weeks in Bangkok Thailand! Those were the days!
After the first week you gotta slow down as you can
get too much of a good thing! Beautiful city, better
beaches than anywhere in the US, except for maybe
North Carolina, great looking women and cheap
liquor!

DxAce has it right.

First off I don't read articles posted by people that advocate the over
throw of the USA government so I don't read David.

Second the news group subject matter is AMBCB, FMBCB and shortwave
DXing. The news group is primarily about short wave though. This will
be a huge surprise to some very confused individuals but the FAQ goes on
for pages talking about, get this, short wave. Now I know something
along the lines OF THE NEWS GROUPS NAME just might escape some peoples
attention but that is another story.

If you want to be on topic then post about a DX'ing experience,
antennas, radios, QSL's, your shack and equipment, propagation or
questions about the same.

DX Ace is a horse's ass. You are a raving paranoid loony. I have
never advocated anything not specified and codified in the
Constitution. I mean that in a friendly way...

''<> What is rec.radio.shortwave for?

As stated above this group was created for USENETers to have a place
to discuss
the radio monitoring hobby. This group is not moderated, however
'serious'
arguments and any kind of flame wars are strongly discouraged. That
is not to
say that genuine disagreement and discussion of differing opinions is
not
welcome. We only ask that you keep the tone friendly, and in the
spirit of
international cooperation upon which the hobby is founded.

This group is intended to be a place where ANY radio monitoring topic
can and
should be discussed. We are happy to hear from posters who listen to
any part
of the radio or microwave spectrum, from DC to daylight. We discuss
topics of
almost any kind, ranging from (but not limited to) shortwave
broadcasting,

DXing small or distant shortwave stations, utility and teletype monitoring,
military eavesdropping, station schedules, QSLing sw broadcasters, spectrum
usage, equipment design and modifications, antennas, receiver reviews and
recommendations, and many more.

Despite what the newsgroup name might imply, we definitely DO NOT limit
discussions to shortwave only. Any radio-related topics are welcome.''

>
> Case closed

I have not been into radio receiver design but it seems to me that the radio as designed has a certain dynamic range and the mod Tom mentioned would cause some loss. In this case some amplification would bring the sensitivity back to what it was. This bandpass amplification example should be able to improve the receiver front end as opposed to broadband amplification. I have not looked at these modifications but an additional preselection circuit with an amount of amplification to make up for the preselection circuit loss should result in an overall improvement. This certainly sounds like a good idea for a radio that does not have a preselector circuit to begin with.

A more simplistic case of just providing more broadband amplification where the receiver is already sensitive enough will plainly reduce the "useful" dynamic range. Another example of merely providing this broadband amplification to a receiver of poor sensitivity but good dynamic range could result in an improvement.

Conclusion... it depends on other factors and what you are trying to accomplish. The modifications would have to be judged on their design and the state of the radio to begin with.

So... mods should be judged on a case by case basis.

Fuck you. Nobody elected you the fucking sheriff.

Don't blame me because the good taxpayers of England quit spending
100s of thousands of dollars a year to send HF signals to a few
hundred hobbyists in North America.

See if you can find an <alt.boardcop.ocd.prick> newsgroup.

If you read into the spirit of what was written in the FAQ, it is
obvious they did not mean to include satellite radio. If the FAQ were
written today with Sirius and XM present, I would expect satellite still
not be included. This is clearly a supposition on my part but on the
other side inclusion looks to me to be a greater stretch.

Besides the news group "alt.radio.satellite" directly addresses this
topic and David is already posting to that news group so this is
Trolling plain and simple and not an honest discussion.

Also a perusal of David's posts to "alt.radio.satellite" shows him to be
on topic.

Newsgroup: rec.radio.shortwave
Date: 2006-03-28 00:54:41 UTC
From: junius <junjunius@yahoo.com>
Message-ID: <1143507281.655583.309410@u72g2000cwu.googlegroups.com>
Source record: 68767

I prefer the RF-2600 to the S350. My RF-2600 is minimally less drifty than my (early model) S350. Also, I find the selectivity of the RF-2600 to be a bit better than that of the S350. Being analog rather than synthesized models, both are nice and quiet (you're not going to suffer chuffing and a high noise floor). Also, both are quite sensitive off the whip. Both have pleasant audio and dual tone controls. The RF-2600 has a BFO control for reception of SSB, whereas the S350 is devoid of SSB reception. That said, SSB reception on the RF-2600 is not particularly great; I'm sure the $60 Chinese portables of today do a much better job of it. Both the S350 and the RF-2600 have image problems. I find that the S350 is far more prone to overload than the RF-2600. Also, my S350 sometimes even drifts on FM, whereas I've not had that occur with my RF-2600. I purchased the S350 some months after the radio was released. As a fan of Panasonic portables like the RF-2200, 2600, 2800/2900, the S350 had some carry-over appeal. I bought my RF-2600 used off eBay. It's in decent shape, and thankfully (unlike with Cuhulin's '2600) reception on this radio has never required anything being wedge into the cabinet.

A good condition, used RF-2600 on eBAy is, of course, likely to go for a fair bit more than a new S350.

If I had given the choice again (and even knowing that the S350s made now have less drift), I probably wouldn't opt for the S350. But it does have pleasant audio, and it's good on batteries. I can understand how it might appeal to someone who's wanting to kick back and listen to some strong incoming broadcasts. I use my S350 primarily for FM and MW listening.

The R8 I once owned worked fine for over a decade. The receivers I own
now are in the single digits in years.

The 7030+ display backlight is failing and I'll have to do something
about it. Any advice appreciated about the display going dark. It looks
like LED's are used for back lighting and they are failing. Some times
they go on and off so it looks like cracked solder connections to the
back lighting LEDs. The display is metal shielded so it looks like a
project to take apart if it is possible to even do that without
destroying the display.

The Drake R8B no problems so far.

The RX-340 had the bulb for the S-meter open. I replaced it with white
LEDS. It looks great and I fiddled with the dropping resistor to it so
the meter illumination and the other displays are balanced. Also had the
receiver quit on me altogether at one point. That problem turned out to
be cracked solder connections in the switching power supply board at the
output connector. All I had to do to fix that was reflow the solder on
the circuit board.

I was intrigued by that post and joined the group. DX 394 is quite a bit
part of a listening hobby.

The DX 394 scans a slightly different breed of frequencies...or does it?
My Yupiteru MVT 7100 picks up all those same frequencies also, and then
some. Does that mean my Yupi is technically NOT a scanner because I can also
use it as an AM/FM/SW/SSB/Weather/TV audio/
CB/Communications/Marine/Police/Fire/Ambulance radio receiver as well?

You'll have to interpret that for me. I don't remember commenting on that thread. In any case what you and I disagree on (respectfully on my part) is whether all of those radios are 'keepers'. I believe that any modern shortwave receiver, even including small portables, must have a minimum set of tools for the user. The Sony 7600 meets those requirements and for a good price and I agree with your assessment that it's the best all around. Still, however, I find the S350 to be a poor rendition of a modern shortwave portable and I don't think I have held a cheaper feeling radio. It's true tha I don't have many portables, as I favor the desktop sets, but the two I have owned: SW8 and ICF-SW55 were solidly built and excellent performers.

I am a Sirius subscriber, and I often listen to Sirius in the car, as I tend to do a bit of long-distance driving. In my car, I also have a Sony XR-4950X car stereo which has shortwave coverage. I like the BBC WS, CBC Radio One and World Radio Network coverage on Sirius, as well as the various public radio offerings (e.g. PRI). For me, though, Sirius doesn't supplant shortwave. I still do a lot of shortwave listening while in the car. Last night, for instance, Sirius got a rest; I listened to R. Bulgaria and R. Cairo while on the road. Heard a bit of R. Burkina (5030 kHz), as well, in the earlier evening.

I'm in this hobby for both the programming content of the various int'l broadcasters AND for the thrill of chasing weak DX. I'm guessing that this is true for most of us in this group. Sirius is a convenient means of accessing various programs, but ultimately, Sirius is very much like a cable subscription. It's a nice service, but it's not an all-consuming hobby in the way that shortwave is for so many of us in this group.

I listen to satellite radio, sure; but shortwave is my passion.

Well, the 5975 tx was from a transmitter in the US, so naturally it was strong. 6035 is from South Africa, so it will be weaker. Ascension always puts in a good signal on 6005, but 7160 is in the middle of the 41m ham band and is thus subsceptible to QRM (like last night when some sort of data tx was there). CRI seems all too happy to fill the void left by VOA and BBC, and somebody posted here a letter to the Washington Post in which a VOA employee urges Americans to listen to CRI. Sometimes I think that everybody in the US govt is smoking crack. Oh wait, Dumbya refused to answer questions about his cocaine usage...

Unfortunately, that's about the average intelligence level of the
average American. Today's minimum wage employees can't count change. If
you're lucky, you'll get one that's reasonably conversant in English.
(But their Spanish is muy bueno, amigo!) If you pay $2/hr more, you'll
get somebody who has a worthless college degree and who can write a
research paper just fine if you allow them to look one up on the
internet. Is it any wonder why employers are looking to China and India?
The average Chinese is better educated than the average American!

> does not have a preselector circuit to begin with.

I have generally recommended a passive preselector for use with the DX-394.
It would take a very good amplifier design along with the improved
selectivity to not degrade the overload and IP3 performance. The DX-394 has
an auto-tuned preselector but it is not very sharp - the total energy
delivered to its RF amplifier and 1st mixer is reduced by increasing
front-end selectivity, thereby reducing the probability of overload. Below
10-15 MHz, losses in the added preselector are likely of no consequence.
Above that, an additional pre-selector with a very quiet amplifier could
improve the overall noise figure (sensitivity). A good combination for many
receivers could be a passive preselector for under 10-15 MHz with a stage of
low-noise amplification that can be switched in for use above.

> A more simplistic case of just providing more broadband amplification
> where the receiver is already sensitive enough will plainly reduce the
> "useful" dynamic range. Another example of merely providing this
> broadband amplification to a receiver of poor sensitivity but good
> dynamic range could result in an improvement.

Adding broadband RF amplification ahead of a DX-394 would be retrograde, as
it would be for most radios.

> Conclusion... it depends on other factors and what you are trying to
> accomplish. The modifications would have to be judged on their design
> and the state of the radio to begin with.
>
> So... mods should be judged on a case by case basis.

Agreed.

Tom

I looked at the Sirius web site and "All International news channels" came up with CBC, BBC and that's it. Sirius is no replacement for short wave.

Radio Netherlands
Daily midnight, 8 am & 6 pm ET
Radio Netherlands is a multimedia organization. We share issues being
discussed in Holland with the rest of the world, in Dutch and several
foreign languages. We also cover regional developments in areas of the
world without free media. Radio Netherlands currently broadcasts radio
programmes and publishes Internet pages in six languages over its own
facilities: Dutch, English, Spanish, Portuguese, Indonesian and
Papiamento. The programme division also supplies stations in Africa
with radio programming via satellite in French, bringing the total to
seven. In addition, special television projects have included
production in other languages, such as Mandarin. Radio Netherlands
Television produces programmes in English and Dutch.

Israel Radio
Daily 1 am & 7:30 pm ET
Israel Radio was established in 1928 and currently transmits 130 hours
a day on eight networks. Apart from news and broadcasts reflecting
events in the country, the channel transmits documentaries on Judaism,
the history of the Israeli people, Israeli culture and discussions on
immigration and absorption.

Earth & Sky
Daily 1:15 am & 10:15 pm ET
Each day, Deborah Byrd and Joel Block discuss popular science subjects
that affect our everyday lives.

Channel Africa
Monday - Friday 1:30 am, 6:30 am & 1:30 pm ET
Saturday 1:30 am ET
Channel Africa in Johannesburg provides unbiased and reliable coverage
from and about the African continent: news, current affairs,
economics, technology, education, environment, tourism and sport are
all covered by Channel Africa. Special interest programs include
occasional round-table discussions with prominent African
personalities and surveys of developments in the world of arts and
entertainment.

China Radio International
Daily 2 am, 4 pm & 1:30 pm ET

China Radio International produces 208.5 hours of broadcasts every day in 43 foreign languages and Chinese dialects. The English Service is one of its most important divisions. CRI's English Service was founded on September 11, 1947.

Today it offers over 60 broadcast hours per day, with overseas listeners in Asia, Africa, Oceania, and North and South America, and domestic listeners in some 20 cities. It focuses on satisfying its listeners by providing informative, timely and interesting programs. In 1998, the English Service received over 150,000 letters from more than 100 countries. It is widely acknowledged that the CRI English Service is one of the world's most effective and convenient media to learn about China. Business people value the station for its promotion of economic and cultural exchanges and enhancement of mutual understanding between China and other countries.

Radio Sweden
Monday - Friday 2:30 am, 10:30 am, 3 pm & 9:30 pm ET
Weekends 2:30 am, 10:30 am, & 9:30 pm ET
Radio Sweden broadcasts programmes of political, cultural and social interest around the world with the aim of bringing all aspects of life in Sweden to foreign audiences and to keep Swedes in touch with their home base while abroad.

Radio Australia
Monday - Friday 3 am, 7 am & 3:30 pm ET
Weekends 3 am, 7 am, & 8 pm ET
Radio Australia is the international radio and online service of the Australian Broadcasting Corporation, the ABC. The Asia Pacific region is our home and we have been broadcasting for over 60 years in key regional languages including English, Pidgin, Chinese, Vietnamese, Khmer and Indonesian. Our blend of voices, music and images provides a truly unique perspective from a broadcaster in the Asia-Pacific region.

Voice of Russia
Daily 4 am & 7 pm ET
Voice of Russia (VOR) has been broadcasting in foreign languages since October 29, 1929. VOR aims to introduce the international community to Russia, present a close-to-life picture of Russian developments to the foreign listener and help the listener gain a feeling of closeness to, and an understanding of Russia. Annually VOR receives correspondence from people living in more than 160 countries around the world.

Radio Canada International
Monday - Friday 4:30 am ET
Radio Canada International offers a full range of Canadian and international news, information and opinion. RCI programs include news, sports, the weather in Canada, and current affairs features, such as reports, interviews, press reviews and backgrounders on political, economic, social and cultural issues.

Radio Prague
Daily 5 am, 2:30 pm & 10 pm ET
Radio Prague is the foreign-language broadcasting service of the Czech Republic. Our aim is to inform the foreign listener about current affairs and other developments in the country, mapping its past and discovering the cultural foundations on which the Czech Republic was built.

KBS World Radio (Korea)
Daily 5:30 am, 11:30am & 10:30 pm ET
KBS World Radio, the international voice of Korea, is the nation's sole shortwave radio network which targets the entire world.

KBS World Radio's primary goal is to strengthen the friendship and international understanding among the peoples of the world. We aim to do so by providing accurate and up-to-date programs and news on Korea's politics, society, culture, traditions and economy, as well as a variety of other information and entertainment on this Land of the Morning Calm. Through our programs, KBS World Radio's international audience, the size of which we have estimated to reach more than 40 million listeners worldwide, will be able to get a better understanding of Korea. KBS World Radio also broadcasts programs to the growing number of Koreans living abroad in recognition of their needs for more direct Korean news and information.

Radio Romania International
Daily 6 am, 11 am & 5:30 pm ET
With RRI you can listen to news and reports covering topical issues and the most relevant phenomena of the social life in Romania and other countries, as well as to commentaries on how they are perceived by the full spectrum of Romanian society. Thanks to RRI you can meet famous Romanian and foreign personalities and listen to the opinions of the man in the street. During our interactive programmes, you can also join in the dialogues with our guests and win important prizes if you give correct answers to the questions of the contests we organise every year.

RTE Ireland
Daily 9 am, 2 pm & 5 pm ET
Radio Telefï¿½s ï¿½ireann (RTE) is the Irish national public service broadcasting organisation. In a highly competitive broadcasting environment, RTï¿½ is the distinctive leader in the Irish media, noted for its performance in transmitting programs of cultural, educational and informational excellence on four radio and two television channels.

Deutsche Welle
Daily 10 am ET
Saturdays 3:30 pm ET
Deutsche Welle (DW) is commissioned to "provide listeners and viewers abroad a comprehensive picture of political, cultural and economic life in Germany and to present and explain the German position on important issues."

Radio New Zealand International
Monday - Friday 12 pm ET
Saturdays 6:30 am ET
RNZI is New Zealand's only shortwave station, broadcasting to the Island nations of the Pacific. Our broadcasts range from Papua New Guinea in the west across to French Polynesia in the east, covering all South Pacific countries in between. Our signal can also be heard in Europe and North America. We broadcast news, current affairs, business, and sports programmes. Our feature programmes include a Pacific business programme - TradeWinds, a regional current affairs show - Dateline Pacific, and a weekly programme for sports lovers. While broadcasting mainly in English, we also carry news in seven Pacific languages, making us one of the most listened to stations throughout the South Pacific.

Vatican Radio
Monday - Friday 12:15 pm & 8:15 pm ET
Weekends 12:15 pm ET
Every day Vatican Radio broadcasts programmes in 40 different languages in five continents, produced by over two hundred journalists located in 61 different countries. Vatican Radio: producing more than 42.000 hours of simultaneous broadcasting covering international news, religious celebrations, in-depth programmes and music. Vatican Radio: from topical subjects to in-depth programmes on moral questions. Vatican Radio: offers to everyone, catholic or not, the Church's point of view.

Radio Slovakia International
Monday - Friday 12:30 pm & 8:30 pm ET
Weekends 12:30 pm ET
Radio Slovakia International was created in 1993, with the emergence of independent Slovakia, its duty being to give other countries information about Slovakia and to keep contact with the numerous expatriate communities. Its programmes are broadcast in English, German, French, Russian and in Slovak for expatriates. The 30-minutes magazines broadcast daily contain news from Slovakia, features on Slovak economy, sciences, culture, geography, environment, sports, examples of verbal and musical arts and portraits of important personalities. Radio Slovakia International broadcasts worldwide on SW, satellites and Internet.

Radio Polonia
Daily 1 pm & 11 pm ET
Radio Polonia is Polandï¿½s external broadcaster.

United Nations Radio
Monday - Friday 8 pm ET
Saturday 4:30 am & 8:30 pm ET
Sunday Noon & 8:45 pm ET
UN Radio was founded in 1946 to promote the universal ideals of the United Nations, including peace, respect for human rights, gender equality, tolerance, economic and social development and the upholding

of international law. In addition to daily programmes, UN Radio produces approximately 1,200 features and documentaries a year, some of them award-winners at prestigious festivals around the world.

Radio Budapest
Daily 4:30 pm & 11:30 pm ET
Radio Budapest reports on the news and current affairs from a country rich in cultural heritage: Hungary may be a small country with only ten million people, but it is one that really punches its weight. Just look at a list of Nobel prize winners. Or read a history of the computer. Or find out who helped develop Windows 95. You'll find a staggering number of Hungarian names. Mix in the intricate and fascinating political changes going on here since the end of the Iron Curtain and it adds up to an irresistible blend, a daily window on our complex country.

It is a LW, MW, SW receiver that scans. Is alt.radio.scanner restricted to
discussion of scanning receivers that can tune only above 30 MHz?

Do a search in alt.radio.scanner:
http://groups.google.com/group/alt.radio.scanner/search?q=DX-394+OR+DX394+or+%22DX+394%22&
start=50&
- 66 threads found, dating from 1996.

>
> It's also NOT amateur equipment any more than it is a scanner,
> and CERTAINLY not 'homebrew'.

Why is the DX-394 NOT amateur equipment (I assume you mean 'amateur radio')?
It tunes the HF ham bands and does a credible job receiving the popular ham
modes on its own and is used with software to receive many digital modes. It
is found in many hamshacks. My first SW receiver was a 5-tube Heathkit AR-3
general coverage radio - it doesn't hold a candle to the DX-394 - but it was
the receiving part of my ham radio station.

I agree that the DX-394 itself is not 'homebrew' but the many mods are of
interest to some homebrewers as have the design discussions carried out in
rec.radio.amateur.homebrew.

When did you become the self-appointed policer of these newsgroups? As far
as I can tell, my original post was in the spirit of guidelines about
cross-posting. Your carrying on with this nonsensical criticism by
cross-posting replies is not.

End of discussion.

Tom

Source record: 68805

Well, I'll agree with you and with my earlier posting that it's no replacement for shortwave.

That said, for the listener to int'l new/info broadcasts, there's a bit more than just BBC and CBC Radio One on Sirius. The World Radio Network (WRN) on Sirius carries English language programming of the following broadcasters:

R. Netherlands
Kol Israel
Channel Africa
Banns Radio Int'l (from Denmark) (weekends)
China R. Int'l
R. Sweden
R. Australia
V. of Russia
R. Canada Int'l
U.N. Radio (weekends)
R. Guangdong (weekends)
R. Prague
KBS
R. Romania Int'l
R. New Zealand
RTE Ireland
Deutsche Welle
Vatican R.
R. Slovakia Int'l
R. Polonia
R. Budapest

Glenn Hauser's World of Radio is also aired weekly on the WRN.

CBC Radio One airs CBC R. Overnight from 1:00 to 3:00 am EST. Programming includes contributions from the following broadcasters:

BBC WS
R. Polonia
Channel Africa
R. Prague
R. Netherlands
Deutsche Welle
R. Sweden
R. Australia

Also, the PRI channel on Sirius carries an hour of Deutsche Welle news from 9:00PM to 10:00 PM EST. I believe, too, that a CBC program or two

is carried on the PRI channel.

A bit more than just CBC Radio One & BBC. I've not visited the Sirius
website; they would do well to expand on their int'l news content, if
those two were all that was displayed when you visited the site.
Perhaps their emphasis is on the music content (?)...

Junius

I have for sale a good condition R-2000 receiver, works great except the attenuator doesn't attenuate (no big deal). sounds great ! a nice low cost comm receiver
will include 50 feet of antenna wire. $195 plus shipping.

more info at: http://www.universal-radio.com/used/sold052.html

and you can see that my price is more than fair.

I still got a Grundig Satellite 400 from 1988. I still sometimes use it on
travel, only fault is that the dial is going difficult now (I did take it
in my backpackt to Madagascar where it did get a bit damaged).

At home I still use my NRD 525 G from 1990. Never any problem with it.

Regards,

Frank

You could be right there as well. I think Simon used to have some at around the same time as I did. Anyway they're still very relevant.

3443. Need info about Pyramid antennas and it's performance

Newsgroup: rec.radio.shortwave
Date: 2006-03-28 10:33:09 UTC
From: shan_rish@yahoo.com
Message-ID: <1143541989.383176.19260@e56g2000cwe.googlegroups.com>

Hi All,

I am a SWL from India and hope to get a ticket soon. I am constructing a simple receiver and i would like to construct a good antenna for my receiver and in future for my transmitter as well. I came across a design in a souvenir released by Hamfest India where an antenna called "Pyramid Antenna" is described. The author gave reference to one design published in Radio Magazibe 1982 by Steve Bauer,DJIUS. I came across another similar design described in http://www.warc.org.uk/clubmag/qsx13.pdf . I would like to know more about this antenna and the experience of using it, about it's performance. My house is near a 11KV power line and my antenna will be less than 15 feet from the above said power line.

Thanks in advance.

Regards
Shan
SWL

Once it's up there on a geo-stationary satellite it's not 'radio'. It's satellite crap. And it's sure as hell not short wave, and it's not medium wave either.

My NC-125 was built in the late fifties. I bought it used in the mid seventies, so I've had it for more than thirty years. I partially recapped it, re-tubed and re-alined it last year. It still works rather nicely, thanks.

My old DX-440 from 1989 is still working fine, and I
occasionally use it so that the kids will get a chance
to play with it.

The oldest radio that I own that still works is the
Hallicrafters SX-100 Mk1, which I obtained last
year. It's it pretty good shape; some recapping
(which I didn't get to this winter) and some other
work will bring it back to great condition.

The Hallicrafters S-20R Sky Champion would have
been working, if I hadn't gotten the idea in my head
to replace the driver on it. It's been in a state of
disrepair for the past 10 years.

I've come to expect most of the clerks at the shack don't know what they're talking about. And yes, you pay peanuts - you get monkeys. I just tell em I don't need any help when they ask.

I went in to the local shack couple years back and asked if they had ICs.
"Whaddayamean ICs" said the kid.
"Ya know, integrated Circuits"
"Nope, we don't have any of those."
So I reached over and plucked up the dual D flip-flop I was looking for and said, "You don't have any of these?"

Not long after that I went in to the shack for something else. I got what I needed and headed over to the cash register corral. I'm like sixth guy in line and there's one register open. I'm already getting kinda flustered cause I really don't like standing in line. I catch one of the clerk turds on the floor PLAYING WITH A RC CAR. I yelled up the line to the lone kid manning the only open register " Hey Buddy, think you can get your pal over here to put away the toy and open another register?" Got a few smiles and nods from the others in line.

I left the store and went over to Walmart and picked up a few things. Was about an hour later that I happened to walk by the Rad Shack and I saw the store manager playing with a RC car out on the sidewalk

Pay peanuts - get monkeys.

My early '40s vintage SX-28 is still going strong, although it needed a
partial recapping. The R-390 hasn't needed anything.

If you wanted to ask about medium wave, my 1916 Navy loose coupler
crystal set still works fine, other than occasionally having to look for
a new hot spot on the galena. ;-)

P.S. Tip for SX-28 owners--watch out for the coupling capacitors on the
6V6 grids. If they go and you don't catch them in time, they could take
out the (replaceable) 6V6s and the unobtainium output transformer.

Yeah, it's true, Universal's prices on used radios can be worse than
those on eBay.

>Not exactly in
> the same league as the $100

Nope, it's not. I acknowledged earlier that the '2600 would run ya
higher. I compared the two simply because of design similarities and
because they had both been discussed in this thread.

>

Yep, the '2600 is a fun radio. But for most shortwave listeners, it's
unlikely to have great appeal, unless there's a significant nostalgia
factor at play...

A good Sony ICF-SW7600GR or even some of the Kaito/Degen portables
would offer much more band for the buck.

Best of listenin' to ya...

Junius

Dear Jackie,

On April 6, 1962 I bought a Lafayette HE-10 ($79.95) and its associated speaker HE-11 ($7.95) along with a pair of Lafayette headphones ($1.49).

Being dissastisfied with those headphones, on July 27, 1962 I bought a pair of Clevite Brush BA-200 headphones ($14.79) and headphone cushions ($0.73).

For over thirty-eight years, until I bought my Grundig Satellit 800 in June of 2000, this was my primary shortwave receiver.

Except for a few tube replacements and a couple of full alignments (just to make sure!) over the years, it has always operated as it did when I first removed it from its box.

Now owning the aforementioned Grundig and an AOR AR7030 Plus (factory-customized), I do not use the Lafayette much anymore. I ALWAYS use it on April 6, its "birthday," (It'll be 44 this year.) but, aside from reliability and its operation, which I LOVE - there's nothing like heavy flywheel-weighted tuning knobs (TWO of them in fact), its overall performance cannot compare to a modern receiver.

But I'll never sell it! It's really nice to "fire it up" and relive my youth every once in a while.

Over the years I tried to replace it, most notably with a Radio Shack DX-400 which I purchased in May 1984. But that set was not in the same "ballpark" as the Lafayette, digital tuning and triple conversion notwithstanding. Until I bought the Satellit 800 and then later the AR7030, I had not found any radio which satisfied me the way that old Lafayette did.

My first portable shortwave radio was a Hitachi KH-1108S which I purchased on June 26, 1969. The only "servicing" this radio has had over the years is battery replacement (4 alkaline D cells last about three years!) and a thorough exterior cleaning which I did a couple of years ago - it now looks like "new" (except for the leather case which has hardened and cracked in places). I still use this radio, for local MW boadcasts - rarely for SW or FM, daily.

Best,

Joe

In outlook express, you can sort in ascending or descending order. I have three panes:
(1) top left quarter is the folders
(2) right top quarter is headers
(3) lower left pane is contacts
(4) right lower corner is view pane

In the "subject" pane in the right top quarter, click on the "sent" column and you will change the sort order; clicking again will sort the opposite way.

>Most likely. :) <

There's a pretty wide range of Republican and Democrat, though. A bit narrower, and maybe more on point, would be to say CINO, with the C meaning "conservative" as in its original sense "fiscal conservative." Most of them are still within the range of social "conservatives" and general policy "conservatives", even if they spend like rich teenage girls on a spree. It ain't the money, it's what you buy with it that separates the two factions.

Source record: 68960

I have a Drake R8B radio for sale. It is a very nice radio and I would like to keep it but I just have too many radios.

Radio has the VHF option and MS8 speaker that sounds very nice, and also a factory operation manual. I do not have the factory box that says Drake on it. I have a large foam in place box that I am told could be thrown out of a heliocopter without damage. I have recently sent it back to the factory for a new tuning resolver mechanism. That is what usually goes. I also had factory go through radio soup to nuts and tweak up to factory specifications. I have about $1300 into radio and would like to get my money back. I know that the radios with VHF option and speaker are going for at least that much on Ebay without a recent $200 tune-up. I have paperwork from factory and you can see my posts here on group concerning radio.

I would prefer not to ship radio. I like customer to see radio and play with it before handing over a bunch of cash. Also, I think it's nice to meet other radio people eyeball to eyeball. I live near Providence RI and you could come by and pick up radio. I will be traveling over the next 6 months from Upper New England to Rochester, Philadelphia and maybe even down near Manassas Virginia or North Carolina. So maybe I can drop off at your QTH or we can meet.

please email me yzordderrex(at)verizon.net if you are interested

3472. Three Antennas : Pyramid Antenna - Inverted "L" Antenna - Tilted Terminated Folded Dipole Antenna (T2FD)

Newsgroup: rec.radio.shortwave
Date: 2006-03-28 18:00:57 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1143568857.146324.168920@v46g2000cwv.googlegroups.com>
Source record: 68961

SHAN,

PYRAMID ANTENNA :
Your Pyramid Antenna would be more aptly described as :
Two Delta Loop Antennas fed out of phase; having a
common fed-point at Apexes; and Slanted at -30 Degrees
and +30 Degrees from the Vertical.

ANTENNAS AND POWER LINES :
Now as to placing this Antenna or any Antenna directly
under the or very near Power Lines : It is not and I repeat
NOT recommended [.]
- - - First consider a smaller simpler Antenna that is further
away from the Power Lines. (20m Inverted "L" Antenna
10m Up and 10m Out -or- 5m Up and 5m Out)

BASIC INVERTED "L" ANTENNA FOR
THE AMATEUR {HAM} OPERATOR
Dr. Ace's [WH2T] Inverted L Antenna Info
ILA => http://www.bloomington.in.us/~wh2t/invertedl.html
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/309
http://groups.google.com/group/rec.radio.shortwave/msg/76f4e4ded6f94686
NOTE: The Amateur/HAM Inverted "L" Antenna is usually made-up
of Two Equal Sections One Vertical 'Leg' and One Horazontal 'Arm'.
These Two Equal Section can be:
* 1/8th Wavelength = Quarter Wavelength Total
* 1/4th Wavelength = Half Wavelength Total
* 1/2th Wavelength = One Wavelength Total
Because of the 'equal' porportionality, the Amateur / HAM
Inverted "L" Antenna is most often Higher above the Ground
then the SWL Version.
Note - For Amateur Radio use the basic common
20m 1/2 WL Inverted "L" Antenna is :
= 1/4 WL on 40m
= 1/8 WL on 80m
= 1 WL on 10m

FWIW :
- Why not place this Pyramid Antenna in the Attic like
the original magazine article did ?
- If you have a Pitched Roof this Pyramid Antenna can
be Laid Top of the Roof using Insulated Wire.
- If you have a Flat Roof then this Pyramid Antenna can
be Laid Flat on a Roof using Insulated Wire.

ALTERNATIVE : T2FD ANTENNA
To the Pyramid Antenna for an out-side location consider
the Tilted Terminated Folded Dipole Antenna (T2FD)

Hard Core DX - "T2FD Antenna" - Info and Design Links
GoTo=> http://www.hard-core-dx.com/nordicdx/antenna/wire/index.html
- - - The Terminated Tilted Folded Dipole (T2FD)
- - - The "T2FD" is a Broad All Band Antenna for SWL.
http://www.hard-core-dx.com/nordicdx/antenna/wire/t2fd.html
http://www.hard-core-dx.com/nordicdx/antenna/wire/t2design.html
http://www.hard-core-dx.com/nordicdx/antenna/wire/t2fdfeed.html
http://www.hard-core-dx.com/nordicdx/antenna/wire/t2fdcomp.html
http://www.hard-core-dx.com/nordicdx/antenna/wire/t2fd_1.html

More About the Terminated Tilted Folded Dipole (T2FD)
* How To Build the TTFD : A Broadband Antenna for
Shortwave Reception - by Arnie Coro [RHC] Dxers Unlimited
http://www.radiohc.org/Distributions/Dxers/ttfd2.html
* Modeling the T2FD - by L.B. Cebik [W4RNL]
http://www.cebik.com/wire/t2fd.html

The Formulas for Calculating Terminated Tilted Folded
Dipole (T2FD) Dimensions are found at :
http://www.hard-core-dx.com/nordicdx/antenna/wire/t2design.html

Simple {No Math} Just-Cut-It T2FD Antenna :
In order to cover the main portion of Shortwave (5 - 30 MHz),
a T2FD Antenna will be roughly 20m (66 feet) long, with a
spacing of 60 cm (24 inches). With the Top-End mounted
about 40 Feet High and the Bottom-End mounted at 7 Feet
with a 30 Degrees from Horizontal Slant Top-to-Bottom.

hope this helps - iane ~ RHF

My Uncle bought a Hallicrafters S-40A in 1947 and gave it to me around 1970. I've since replaced the paper and electrolytic capacitors, restrung the dialcords and replaced a broken knob. The rectifier tube has been the only tube which has gone weak although I've managed to break a couple of the others due to mishandling. Most of the rest of the tubes are the originals and they still work fine. The radio now works as good as new. In fact, it's better than new, as the bandswitch was originally miswired and I've corrected that.

Source record: 68984

I've heard this before but I don't think it's in my logbook. I'm hearing middle-eastern music on 15510 khz at 1900 UTC. hfradio.org lists this as a VOA frequency during 1500-1900 UTC, and I wasn't listening to it before the hour mark so I didn't hear the transition if there was one.

Last time I heard this broadcast, it was just music and there was no voices or identification of any kind. Can anyone help identify it?

I'm using an Eton E5 with a 12-foot wire antenna. The signal has a lot of fading.

Oh yeah, you asked for the frequency.
Speed of light divided by wavelength of red light
in meters would be the 8 x 10^-7 meter band
(3 x 10^8) / (8 x 10^-7) = 375 x 10^12
So that would be 375 Terahertz I think.

I get the Sun on that channel not Sirius.

Living in the very center of Downtown Reno, with it's endless casinos and neon lights and other obnoxious RF mutilators, has done a beautiful job of wrecking my shortwave reception. The current solar situation is certianly not helping any either. That being said, is there an antenna that is sheilded or a loop antenna that i could build? My apartment is a studio and there is no roon for an outdoor antenna(which would pick up more noise anyway). I have an ANLP-1 active loop as well, which reduces the noise a little bit...but still not enough to enjoy listening.

What kind of tube tester do you have?

The audio output tube has got to be soft by now. Either that or the
radio never gets used.

Buying ICs these days means mail order. Digikey, Mouser, Active. etc.
Even a Fry's only sells NTE, not real parts.

Most foreign aid comes with stipulations that the recipients do
business with KBR/Bechtel type companies. It's a racket. The entire
system is corrupt from top-to-bottom. This is why I welcome global
calamity. It can only help.

the radio i had in my miss-spent youth was a beautiful 1947 firestone console. it had 6v6 push-pull output, a great sounding 12 inch speaker and a built in rotatable loop antenna. it was still working great in the early 1980's until i met my wife. spending lots of time with her (you know, i had a new toy!) i neglected my listening for two months. that was just enough time for a family of mice to move in and destroy everything! i didnt know and the first chance i had to use the old girl was the last! the fire left no chance of a re-build. we held a solemn funeral later as my friends carried her still beautiful carcass out and laid her to rest. (it still chokes me up just thinking about it!) you never get over your first! oh well......i still have the wife, it was a good trade........i guess........

Did they convert the Sundowner into condos or something? Or do you live in the Riverside? Either way, best thing to do would be to move to the suburbs. I agree with Ace and David here. Check the Gazette Journal, there's plenty of cheap apartments in the suburbs. If you're locked in to a long term lease, get a book on Nevada landlord/tenant law and try to find a loophole that will allow you to get out of your lease. If you can't move, get a Wellbrook active antenna, it's the best one out there. Pricey, and it's only available from vendors in the UK (which means paying in pounds), but it may be your best hope. But I doubt that even the best active antenna will do much. You'll ultimately have to move.

To decode LSB, you'll need a radio with LSB decoding capability, which I don't believe the 800 has. Most cheap radios that have SSB simply have an "SSB" button which is used more for muting QRN/M than for ham listening. For ham reception you'll need a tabletop. FYI.

I recall reading about a device that would sample the outside
electrical racket and apply it 180 out of phase to the radio input in
order to reduce the interference. Perhaps someone in the group has
information on it.
In the meantime some of the osculators in the streets of Reno could
send you some signals.

News, current-events/magazine programs, talk radio.
Once upon a time you could add serendipidy to that list, but not any more -- radio today is as predictable as a clock -- nothing new in the programming.

Older people of past generations may listen because they don't want to mess with MP3s or podcasting -- especially in a car.

Convenience combined with apathy. If you like, or at least can tolerate bland, mediocre programming, then domestic radio is for you.

World Band/Shortwave is still interesting enough, but they too are listening to marketing geniuses and going dark 'cause "nobody listens to shortwave."

Eduardo or Mark Byford -- birds of a feather.

Well, if I count the ones I've owned the longest, I have a
ten-year-old R8500... my regens of my youth are long gone, probably
sold by my parents at a garage sale.

The oldest radio I have is my R-392, one of the last run built in
1963. It has -- horrors! -- transistors in the audio stage.

(Try to think for yourself some time, and be much more skeptical about
what your TV tells you.)

As incompetent as George W. Bush has been in his response to the
disaster in New Orleans, he wasn't the one who began the process that
inevitably led to that disaster spiraling out of control.

That would be Ronald Reagan.

It was Reagan who began the deliberate and intentional destruction of
the United States of America when he famously cracked (and then
incessantly repeated): "The nine most terrifying words in the English
language are, 'I'm from the government and I'm here to help.'"

Reagan, like George W. Bush after him, failed to understand that when
people come together into community, and then into nationhood, that
they organize themselves to protect themselves from predators, both
human and corporate, both domestic and foreign. This form of
organization is called government.

But the Reagan/Bush ideologues don't "believe" in government, in
anything other than a military and police capacity. Government should
punish, they agree, but it should never nurture, protect, or defend
individuals. Nurturing and protecting, they suggest, is the more
appropriate role of religious institutions, private charities,
families, and - perhaps most important - corporations.

Let the corporations handle your old-age pension. Let the corporations
decide how much protection we and our environment need from their
toxics. Let the corporations decide what we're paid. Let the
corporations decide what doctor we can see, when, and for what
purpose.

This is the exact opposite of the vision for which the Founders of this nation fought and died. When Thomas Jefferson changed John Locke's "Life, liberty, and private property" to "Live, liberty, and the pursuit of happiness," it was the first time in the history of the world that a newly founded nation had written the word "happiness" into its founding document. The phrase "promote the general welfare" - another revolutionary concept - first appeared in the preamble to our Constitution in 1787.

Talk show cons and TV talking head cons and political cons - both Republican and DLC Democratic - repeat the mantra of "smaller government," and Americans nod their heads in agreement, not realizing the hidden agenda at work.

Reagan was the first American president to actually preach that his own job was a bad thing. He once said, "Politics is supposed to be the second oldest profession. I have come to realize that it bears a very close resemblance to the first." One can only assume he was speaking of himself and his fellow Republicans, and certainly the current Congress's devotion to the interests of inherited wealth and large corporations displays how badly his philosophy has corrupted a role so noble it drew idealists like Jefferson, Lincoln, and the two Roosevelts.

MFJ makes one also. But keep this in mind- it is not magic. The principle is
that it picks up noise on a sense antenna. You match amplitude and invert
the phase of the noise and then add that to the signal+noise coming in from
your RX antenna. Theoretically the noise cancels itself.
This will NOT work with multiple noise sources as the amplitude and phase
will be different for each source. If you have one dominant noise source,
like an arcing power transformer, it may be worthwhile.

If you're really passionate about shortwave listening, you might consider taking the hobby outside of your apartment. Are there any state/national parks, recreational areas, or wilderness reserves in your area? If you're the type who likes to listen for hours at a stretch, then take your radio and an antenna or two...then drive on out to such a location and do some listening in peace and quiet. Sure, it's not the sorta thing you can do every day, but it might be worth considering, if you're unable to move from your present location for the time being (and you don't want to give up on chasing DX).

For a time, i lived in an extraordinarily noisy urban apartment where reception was about as bad as I've ever encountered. On many a weekend, I'd retreat to the mountains about an hour's drive away and do some hour-after-hour listening.

Just an idea...

Junius

The recent cuts do indeed suck.

But the BBC does retain a radio presence in C & S Am:

I own an Grundig sat 210 amateur(it was buitl between 1969 and 1973) ,
I bought it about 25 years ago. And it has 2 failures: 1 defect on
first Rf stage : this is fixed. 2 ddefect switch for external
antenna.By pushing the button down and locking it with a pin it works.

Alll by all, in combination with my remote controlled remote mediumwave
loop it is perfect : extrem sensible and a perfect audio.

Greetings Han

you can also visit my website with recordings below 30 MHz.

Appears you simply enter your zip code, and it gives you an estimate of how strong local radio stations are coming to your locaion, in terms of decibels. Kind of a cool reference tool.

That *is* a useful site, isn't it?!

I've encountered a number of sites that are able to cross-reference ZIP codes to geographic coordinates - don't know where they're getting the data but my guess would be the Census Bureau has a database.

The technical facilities of the radio stations are available in databases downloadable from the FCC.

The firm that runs the site is a broadcast engineering consulting firm; their regular work involves the ability to predict field strength at a given distance, transmitter power, and antenna parameters.

Combine that, and you end up with what you see there.

Vertically polarized antennas pick up more manmade noise than
horizontally polarized antennas. So switching from a whip or random
wire to a horizontal dipole may help. It won't solve all of your
problems, but might make things a little better.

Sounds pretty hopeless. Just for kicks, try connecting a piece of wire from the ground screw on an electrical switchplate to your receiver's antenna port. This works pretty well with my the Sangean ATS-803 in my 2nd floor bedroom. The length of wire from the "ground" screw to actual rf ground can be pretty long.

I agree...he should try to get a wire up on the roof of his building. I know a ham in Brooklyn who was granted roof rights. He used the four corners of his large apartment building to erect a big horizontal loop. I don't know the construction details (how long, how high, etc.), but it works like gangbusters.

I lived in Reno for a few years, not far from the Peppermill casino on Virginia Lake. If he could get out of town, he could probably find a nice spot for SWL. In fact, I halfway suspect that most of his noise problems are coming from the very building he lives in. RFI, like charity, begins at home.

Maybe for the big commercial broadcasters, but some
small ones are still around.

> Older people of past generations may listen because they don't want
to
> mess with MP3s or podcasting -- especially in a car.

Which is actually not a bad idea; fewer distractions
means more attention paid to driving.

> Convenience combined with apathy. If you like, or at least can
> tolerate bland, mediocre programming, then domestic radio is for
you.

I suppose we're lucky in Cincy; we still have a 24 hour
public radio Classical station. We've also got school
(high school and trade school) programmed stations
that have some nice programming, too. We've also
got WAIF, one of the non-commercial community
radio stations around.

Oh, we've got the big guys, like Clear Channel,
Infinity and others, but we're not limited to them.

There's always stuff to listen to if you look hard.

> World Band/Shortwave is still interesting enough, but they too are
> listening to marketing geniuses and going dark 'cause "nobody
listens
> to shortwave."

And no one listened to punk after the 70's, too.
Then suddenly the Grunge movement sprang
fully blown on the world, proving that yes,
people did listen to punk after all. I'd not consider
shortwave dead yet just because the heyday
of WW2 and the Cold War is long gone.

This is a bit off the beaten path, but my old Astronaut-8 from Sadio Shack, a surprisingly sensitive and selective set, also had a big speaker in a big container that sounded good. Good reception off the whip, and looked/felt/sounded like a "real" radio. If you can find one used, in good shape, it's a keeper. I wish I'd kept mine.

I looked and found two of them in eBay completed items. One went for $9.99 and another went for $19.00. They didn't seem to be in the greatest shape, but I suppose if one keeps their eyes open they can come across a decent one.

Yeah, they show up there once in awhile...I saw a couple a few years ago. The ones in nice condition go for $75 to more than $100, in some cases exceeding their original value (I got mine for $109 way back when). One of these days... :-)

They do. You can see the whole family at

http://www.tivoliaudio.com/

I have a Model One that I use in my radio listening room (as an external speaker for some of my shortwave rigs) and a Model Two (stereo) in my work office. The sound is excellent on both, although a bit bassy for my taste (I've been suggesting to them for years to add a tone control, to no avail). I have no experience with the PAL or Songbook, but they look like cool radios, esp. the latter.

You know, Voice of Korea, China Radio International, that kind of propaganda. The more people that tune in to the CCP's version of events, the more people will see things the Party's way, goes the thinking. It helps to plant Party-made radios in places like The Sharper Image.

According to Passport, Radio Free Asia is on at that time and freq. Maybe you're hearing China's music jammer? Does it have lots of drums and flutes, rather frenetic, never stopping or pausing, no voices? If so, it's the Chinese music jammer blocking out Radio Free Asia. The jammer comes from many tx locations, so it's rather sporadic in reception. Sometimes I'll hear the jammer only faintly behind the Chinese language talking of RFA, sometimes they're the same level, and sometimes the jammer is the only thing on the frequency.

I think that when you're 20, there is no such thing as too much of the "good thing" that Bangkok offers. Only thing you really need is lots of money.

> say now Jesus is coming soon, hear that Ma? yeehew!

In fact, religion drives much of what the Republicans do. They invaded Iraq because Revelation says that the final war will be fought in the Middle East, and they were hoping to spark it by going into Iraq. There were many preachers saying that Iraq would herald the end of the world and that the sheep should praise Bush for hastening the return of Jesus. The evangelicals are eager to destroy the world because Revelation says the world will be destroyed before Jesus comes. Such an attitude is extremely dangerous when held by people who have their finger on the trigger of 15,000 nuclear weapons. I think that Bush's refusal to recognize the reality of global warming has the same root-the world will be destroyed anyway, Jesus is coming real soon, so who cares that Antartica is melting? It's like James Watt saying that natural resources should not be preserved because the time is short before Jesus returns. I suppose that the last Christians on earth, after the nuclear holocaust that they are determined to create, will be proclaiming that NOW Jesus is surely returning, in between puking up blood because of the radiation. I suppose that if anybody lives through THAT, they will abandon the religions that caused the headlong rush towards catastrophe, and humanity-all 2000 of them-will live in peace.

WHO?
Extension 720 with Milt Rosenberg
http://wgnradio.com/shows/ex720/index.html

WHAT?
Subject: THE HISTORY OF FASCISM
In the early 20th century, fascism swept across central and eastern Europe
and eventually dominated the governments of Spain, Italy and Germany and
gained adherents in the United States, Argentina, South Africa and Japan.
Though the fascist governments of Mussolini, Franco and Hitler differed
greatly, each was characterized by their extreme militarism, contempt for
democracy, and a belief in the rule of elites--all characteristics that made
them some of the most brutal and murderous regimes the world has ever seen.
...we examine the evolution of fascism from World War I to World War II with
two historians: STANLEY PAYNE, professor of history at the University of
Wisconsin Madison and an expert in the history of fascism, and PETER
FRITZSCHE, professor of history at the University of Illinois
Urbana-Champaign and an expert on the rise of fascism in Germany.

WHEN?
Friday, March 31st at 9 p.m. CST
(Saturday, April 1st at 0300 UTC)

WHERE?

- Cuban Missile Crisis -
We replay the Cuban Missile Crisis, taking full advantage of the declassified documents and taped conversations, with Arthur Cyr, professor of political science at Carthage College, and John D. Gresham, co-author of DEFCON-2: Standing on the Brink of Nuclear War During the Cuban Missile Crisis.(03/08/06)
http://archive.wgnradio.com:8080/ramgen/wgnam/shows/ex720/Audio/cubanmissilecrisis060308mr.rm

- The Cosmic Landscape: -
String Theory and the Illusion of Intelligent Design.
The father of string theory, Leonard Susskind, discusses the origins and landscape of the universe and how current research into string theory disproves the theory of intelligent design. The occasion for this conversation was the publication of his new book. (01/09/06)
http://archive.wgnradio.com:8080/ramgen/wgnam/shows/ex720/Audio/susskind060109mr.rm

- Alien Abductions -
Thousands of people each year claim that they have been abducted by creatures from another planet. Those claims, and the reasons behind them, are analyzed in this conversation with Susan Clancy, author of Abducted: How People Come to Believe They Were Kidnapped by Aliens. Joining her for part of the interview is Paul Kurtz, founder of CSICOP, the Committee for the Scientific Investigation of Claims of the Paranormal. (10/31/05)
http://archive.wgnradio.com:8080/ramgen/wgnam/shows/ex720/Audio/abductions051031mr.rm

- Churchill and America -
Sir Martin Gilbert, the official biographer of Sir Winston Churchill, discusses the unique relationship between Churchill and the United States, as outlined in his latest book Churchill and America. This interview also includes several excerpts from famous Churchill speeches, including the famous "Sinews of Peace" address given in Fulton, Missouri on March 5, 1946. (10/24/05)
http://archive.wgnradio.com:8080/ramgen/wgnam/shows/ex720/Audio/churchill051024mr.rm

- Putin's Russia -
In this conversation, we go inside Russia under Vladimir Putin with two people with on-the-scene experience. Peter Baker and Susan Glasser were the Washington Post's co-bureau chiefs in Moscow from 2001 to 2004, and they are the authors of a new book Kremlin Rising: Vladimir Putin's Russia and the End of Revolution. (06/23/05)
http://archive.wgnradio.com:8080/ramgen/wgnam/shows/ex720/Audio/russia050623mr.rm

- Immigration -
A panel of experts tackles the large subject of immigration in America and

what should be done to better control the influx of people into the United States. Our guests are Barry Chiswick, professor of economics at the University of Illinois Chicago, Anna O. Law, professor of political science at DePaul University, and Rob Paral, research fellow at the American Immigration Law Foundation. (03/16/06)

Perhaps, but with MP3 players as part of the dashboard radio, dropping
in a single disc and playing for hours on end doesn't seem like that
horrendous a distraction.

I don't disagree -- but there is a sharp decline because of people
like Eduardo convincing them that their cash flow is an illusion.

>

Shortwave isn't dead, and probably won't die. World events will keep
it alive, along with acts of nature: Satellites die off because of
solar storms, micrometeroids, radiation or simple age. Whenever there
is a world disaster people in the know will listen to shortwave and
those not in the know will get interested again.

But you and I are discussing facts. Eduardo doesn't deal in facts, he
deals in numbers produced by "market research," which bear little
resemblance to facts. His customers, however, can't tell the
difference (and neither can he). They make decisions based on
numbers, not facts.

The more stations deal with his numbers, the more they will die off.

Shortwave, by contrast, is dictated by politics and a different set of
numbers, also pretending to be facts. Mark Byford is augering the
BBCWS into the ground based on his numbers. The IBB is doing the same
with VOA (and all its illigitamate stepchildren). China sees a
different set of numbers and is acting in a completely different way.
Who do *you* think is right this time?

Technology is neither good or evil, shortsighted or not -- only those
who use it possess those attributes.

While many users of tecnology are ignorant or intentionally
shortsighted, there is a significant number that see the world
differently and act accordingly.

However, this means nothing to Prickets, who has already shown himself
to be utterly psychotic by declaring that only hatred exists.

But, to be fair, he should be allowed to demonstrate his commitment in
his beliefs. If everything touched by humanity turns to shit, and
since (biologically speaking only), you are part of humanity, you can
slow down the utter destruction of humanity by removing humanity from
the picture. The ultimate place to start, and to show your commitment
to this ideal, would be with yourself.

Yeah!
I use is quite a bit..

Plug in your Zip Code, and a list of AM / FM stations
With their signal strength comes up..

then you se if you can pic them up.

I have had Very good results with the Degen DE1105 and A few yards of
external antenna..

Very good site

Many people did not hear punk until after 1980, since the 1970's were cram-full of disco and even many college stations did not play punk until the 1980s. I don't consider much of the new grunge to be eligible for a "punk" label. And even that is still avoided by most stations in favor of every other type of music. If punk had gotten the airplay that (c)rap music does now, I'd sure have been happy.

Please stand by while we switch to digital hybrid IBOC mode....SCRTCHSHSHS

I try to go that extra mile for whoever would purchase a radio from me.

the R7 is back on the shelf next to the NRD-515

I listed it because it only cost a dime and I wanted to see if I could get a
nice price (for me)

Groan, I've been there too.

Here's a wild idea that worked for me as well as anything did back in my urban apartment days.

Assuming you have metallic window-screens (plastic screens do NOT work at all), try wrapping one end of a length of wire around your radio's whip (or push wire into center coax connector) and the other end hooked around some part of your window-screen.

The window-sceen acts as a capacity hat and seems to allow decent signal pickup.

That said, a tuned loop would work better but will cost you time or money.

You might try the Sony AN-LP1 if you don't mind switching bands and listen mainly to the standard SW broadcast frequencies. It doesn't cover the utility bands.

Still, a length of hookup wire is cheap, so I recommend trying this first to see if it improves things. It's certainly true that you can spend any amount of money on radios and antennas, and even so there are no hard guarantees of results.

Good luck.

I deal in the Census, proprietary data and talking with listeners. Market
research is simply speaking, one by one, with real listeners. Your
contentions are simply stuff you blow out of your butt.

> His customers, however, can't tell the
> difference (and neither can he). They make decisions based on
> numbers, not facts.

The numbers are are fact. Even a poll is "fact" as the user knows the margin
of error and accepts the consequences.

Advertisers support over 11 thousand US stations. they demand a
quantification of thier investment, based on the cost per listener reached.
Otherwise, there is no way to quantify the effectiveness of the investment.

It is a fact that Bush is obsessed with religion. It is a fact that there were people saying that invading Iraq was good because it would lead to The End. Read American Theocracy and With God On Their Side.

By the way, a "cadre" is a group, not a person. You consistently call David Rickets a "cadre" when in fact that is an incorrect use of the word.

RD - 'your' so called broad statement 'facts' are at best
Exaggerations of a few individual statements by a small
minority of persons who are NOT representative of the
majority as a whole.

RD - Repeating More Liberal Lies :
Does Not Make Them True [.]

RD - Repeating More Lifet-Wing Distortions :
Does Not Make Them Facts [.]

FWIW - One Book - Does Not Make "A Fact" -or-
For that Matter make a Misstatement "The Truth".

Cadre is as Cadre Does : Cadre can be equally applied to
the 'individual agent' of a Group or to the Group as a whole.
Most good dictionaries will give more that one possible
meaning for a Word and it's Uses.

NOTE - RD that 'you' and Greg seem to think alike :
"A cadre is a group... A person is not a group.
A person cannot be a cadre. - Greg "

RD - 'you' appear to be another single definition liberal : A
Good Person Who's Humanity is Limited by His Body-Politic.

RD - 'F Y I'
How To Educate {Up-Set} a Liberal
[Tell Them The Facts and Give Them The Truth]
" C A D R E "
Merriam-Webster OnLine Dictionary
http://www.m-w.com/cgi-bin/dictionary?va=cadre
+ + + Plus Three 'other' Online Sources
http://dictionary.reference.com/search?q=cadre
http://www.answers.com/cadre&r=67
http://www.thefreedictionary.com/cadre
1 - A nucleus of trained personnel around which
a larger organization can be built and trained:
a cadre of corporals who train recruits.
2 a - A tightly knit group of zealots who are active
in advancing the interests of a revolutionary party.
2 b - "A Member of such a Group."
3 - A framework.

1) Your statement doesn't address the trend towards fewer and fewer
stations each year. How many owners were there 10 years ago? 20
years ago?

2) 3500 is much less than half of 13,500, implying that the majority
of owners own more than one station. "Most" are small? NO.

>

Tell it to the WSJ.

Don't try to tell a statistician about the infallibility of
statistics. You have improper assumptions about your listener market,
your station reach, and how to measure the power of that reach. You
don't even consider much of your listener base to even exist. You,
sir, are full of shit.

No, the numbers are not are not fact! The numbers are a massaged
sample of polling data gathered in ways to support sales of your
services, nothing more.

>

What they get is a skewed model pretending to represent all listeners.
They *could* get more accurate figures, but they don't want to pay for

them, so they hire someone like you, and you take advantage of them.

I looked it up. It can be singular

George Bush doesn't give a rat's ass about religion. That's just a
tool to get votes. He is plain old fashioned in love with wealth and
power. With a little sadistic streak on the side.

Oh, I forgot...I have a BC348Q built in 1943...also re-tubed and
re-alined last year. I know nothing of this radios history during WWII
and know only a couple of its post war civilian owners. This radio was
built to survive near misses from 37 mm cannon fire...perhaps it has.
It still works well today.

Fired up my ICF-2002 after years of inactivity, replaced the batteries, and have forgotten how to set the time.

I can set time by simultaneously pressing the Set and H or M keys, but when I release the keys, a different time is displayed. The time I set is somewhere in memory, as I can see it by pressing the Set key.

Incidentally, the AA batteries in the radio were in good shape, but were two years out of (max use) date. The D batteries in the external battery case presumably had another year of use, but what a mess! I thoroughly washed the case with hot water and shined up the connectors with a typewriter eraser. I was really lucky the AA batteries were ok

Hallicrafters S-38EB radio and a Grundig AM/FM/Shortwave/Phonograph wooden cabinet floor model radio (I say it was built by Telefunken because everything in the two little owners/operators pamphlets that came with the radio refer only to Telefunken as far as brand name goes,but on the front grill is a warped [warped from age,I guess] pot metal thingy that says Grundig and the only date I can find in only one of the two owners/operators pamphlets/booklets says 1957) and a Grundig Opus 7 AM/FM/Shortwave wooden cabinet radio.

I dont know which of those three radios is the oldest.I still need to locate a power cord for my Grundig Opus 7 radio so I can try it out and see if it works,when I bought the radio at a Goodwill store,the power cord was missing.The other two radios (which I also bought at a Goodwill store do still work,but I dont doubt they need some recapping or whatever and a good tune up so they will work as good as new and I dont know how to work on radios.

Source record: 69026

Hello all,

I am new to the group but have a specific reason for joining. The primary reason I joined, like many of you I am sure, is to get information about short wave radio. My situation: I have the appropriate parcel of land (110) acres that is free from any legal impediments to building a short wave radio tower. The land is located in West Central Alabama, in rural Fayette County.I also have the necessary funding to build a short wave radio tower and transmitter. The site has been evaluated as a perfect location that is virtually free from any potential liability and from the perspective of reaching millions of people in Mexico and Central America.

Questions for the group:

1. What are the potential financial rewards for owning and operating a short wave radio transmitter/tower?

2. How does an owner go about establishing a revenue stream from potential purchasers of air time.

3. Who would the primary customer base be?

Comments or suggestions?

Thank you,

DrJoe (newbie)

Well, I don't know the answers to all your questions, but the most obvious question for you is: Do you have a license from the FCC yet? Before you actually get a legal license to start broadcasting, all your other questions are pretty much moot.

Hi Invader3K,

No, I do not have a license. I am really not at that point in my quest yet. All I am really looking for at this point is whether or not it is a viable economic opportunity. If so, where would the income stream come from, and how to go about obtaining customers who want to lease air time.

:)

There are stations going dark every year, because even with multiple ownership, they still can't produce numbers to justify their expense. Personally, I think that if the bean counters got out of the way, there would be a somewhat different landscape, but that's not where Radio is today.

Decisions are made based on a stock price and profitability. Long gone are the days when a station that scored a 15% percent margin was considered a super performer. When I left CBS, Chicago, one station in the group was recording a 72% profit margin. That was unheard of when I started. 20% was off the charts then. Common ownership, and some union decertification has made higher numbers possible. Salaries aren't what they were, except for the anchor names, expenses are squeezed until the staff runs blue. With profits like these, common ownership, and the ability to get banks involved (where they wouldn't touch Radio before) mom and pop shops are being swallowed up by investor groups, media companies, and corporations looking to diversify. The Florians owned WNIB/WNIZ in Zion. They were a pair of successful commercial classical music stations in Chicago metro. And they routinely waxed WFMT in the book. They were determined to stick it out. No debt, the stations were low stress, very profitable, and had strong followings. Bonneville offered them 12 figures for the pair. They said 'no.' Bonneville came back at them. And kept coming back each time they declined the offer. Eventually, they relented. And took not much less than a half a billion dollars for the pair of stations.

With that kind of lucre, you're not going to find many single station owners willing to hold out for long. Especially since many stand alone stations are nowhere near as profitable as the Florian's.

Single owners are down. They do still exist, though. But usually in smaller markets, and nearly always with signals not desireable by heavier investors.

The number of stations, however, is still quite high. And some will be going dark because there are just too many of them for them all to be profitable. And in the US radio is and always has been about the money.

13,500 is a LOT of signals.

>
> 2) 3500 is much less than half of 13,500, implying that the majority
> of owners own more than one station. "Most" are small? NO.

Small stations are not defined by their ownership, but by the installation, their coverage, their staff and the total investment in the property. Most stations are small stations. You don't find $50 million stations in Watseka, Illinois. And even here in Chicago, there are only a few "large" stations. Many of them coming in from the collar counties. Even WROK/ZOK in Rockford are considered 'smaller' stations.

Most of them are small.

And with a handful of groups accounting for more than half the stations on the air, what's left are smaller groups of stations by smaller companies.

The industry may be influenced by CCU and CBS, but it's not owned by them. The largest company owns less than 11% of the properties. The next, a fraction of that. Everything else is smaller by definition.

Now, you're right, that things are dramatically different than they were 15 years ago. And that diversity of ownership, and the fierce competition for ratings in a single format are largely over. Formats are structured more strategically, to protect producing properties, or garner saleable numbers collectively, instead of going head to head and pouring hundreds of kilobucks into bludgeoning a single competitor into a stupor. Today, it's done much more scientifically. And I think the results are less exciting, often less interesting. That's why I don't listen near as much as I once did. But then, I'm not being served by the media, either. I don't fall into any of the desireable demo- and psychographic grid spaces. So, what I think is largely of no interest to Radio.

It's cold. But unless I can show Radio how to make more money than they're making by doing something different than they're making now doing what they're doing...it is what it is.

>
>> I deal in the Census, proprietary data and talking with listeners. Market
>> research is simply speaking, one by one, with real listeners. Your
>> contentions are simply stuff you blow out of your butt.
>
> Tell it to the WSJ.

WSJ is in the business of serving investors. Not in the business of encouraging creativity, or manufacturing innovative products. They serve investors. And investors are interested only by dividends. WSJ serves

that interest, nothing else.

Wall Street getting involved in Media took the focus OFF of the things that are important to you and me (such that they are, anyway...those things had been in decline for two decades anyway), and put them squarely on the minutiae of maximizing profits. Which reduced Radio and Radio content to a commodity. Wonder Bread with a ground plane. Content retooled and revised until it's devoid of surprises, but that sells. And that's what investors want: Products that sell, and sell with INEXPENSIVE production. So, profits can skyrocket. And the numbers create a demand for other investors. It can, and has been, argued that investors insure the future of radio stations. And as businesses, this is true. But it doesn't do anything for content. And content can be contrived to sell, at low cost, virtually in perpetuity. Unless there is a public revolt, it will continue to be so. Because, beleive me, if there were a demand for something done differently, CCU and the other media companies would be lining up to get it done.

But there is no such demand. Only bitching from guys like you and me...and those of us here dissatisfied by the current state of Radio. If you want to change things, then create a movement. Make some noise. But you have to show them how to make more money by doing something differently than they're making by doing what they're doing.

Complaining in a USENET newsgroup is not likely to make a big difference. Because there's no easy money in it.

>
> Don't try to tell a statistician about the infallibility of
> statistics. You have improper assumptions about your listener market,
> your station reach, and how to measure the power of that reach. You
> don't even consider much of your listener base to even exist. You,
> sir, are full of shit.
>

That's really unnecessary, Eric. And beneath you. What's difficult to get through to people who haven't gotten to spend time behind the curtain is that the assumptions are not made by Radio, but by the people paying the freight: Advertisers, mostly, and, at least today, the investors. Radio is the facilitator, not the driver. Advertisers are the drivers. And most advertisters of any size, are driven by advertising agencies who created the models you find so offensive. Agencies, seeking to insure that they got the most bang for their buck, how to get the most qualified impressions for each dollar spent with zero waste. Not how to get the most impressions....or how to spend the least dollars, but now NOT to spend a single dollar on a wasted impression.

For that you look at what's under the bell curve. The mean plus one standard deviation, if that. And you do that for each of the parameters under consideration, including geographic coverage by signal strength. Then you take the intersection of all these subsets and that's the target. The EASIEST, most cost efficient way of producing numbers.

Strictly commodity thinking.

Does this orphan real listeners? Yes. Are there numbers of them? Yes. Do they matter? No, because expressed as a percentage of the defined target, they're statically insignificant, AND they are more likely to be wasted impressions.

It's cold. But this is how the agencies actually spend money. And advertisers call the shots. Radio would rather say, "look we've got a signal from Mackinaw to Bloomington, with a population of 9 million. $5000 a spot." Advertisers aren't going to buy $5000 spots beaming out over 100 miles of water, or in towns were the signal strength is lower than the spark noise of the neighbor's lawn mower. Not because there are NO listeners there. But because those listeners arent' under the bell curve. There are too few of them to be measured and targeted efficiently. Now, those listeners MAY be otherwise targetable. But for them, there are other media. Like the local stations in Bloomington. But when negotiating with Chicago stations, that topic doesn't come up. And stations in Chicago aren't interested in hearing that they can't get $5000 a spot. So the advertisers work up these models. The ratings companies deliver the figures, the ratings interpretation companies package the numbers and the sale profiles and the agencies work up a cost per point, or a cost per thousand figure. That's the figure they buy the stations for. With all the non questionable or statistically insignificant listeners excluded from the buy. Those listeners are picked up on other buys....local buys....but not from the single station with the big fringe.

And again, it's not radio stations that create these models. It's advertisers. Do radio stations adopt them? Sure they do. There's money in it. But they don't create them. They get them from resources serving the people with the money. Radio works these models based on the assumptions as defined by advertisers for their own sales pitch, but the don't sell what the advertisers don't want to buy. And the cold truth is that they orphan listeners every day, because those listeners are of no interest to the advertisers. The advertisers who tell the radio stations what they're interested in.

Put that directly: Reach is not defined by the Radio Stations. Reach is defined by the Advertisers, by what they're interested in. Advertisers TELL Radio what Advertisers want to buy, and how the Radio station's reach works for them. It does NOT come from Radio stations.

So, while I don't really have any use for consultancies in Radio, what David does is show the Radio Station how to maximize it's profitability. So the station may serve it's investors/stockholders. What assumptions are made come from Advertisers. Not radio stations. And certainly not consultants.

What's highly misunderstood is that Radio stations somehow create programming to serve the public. This is only showbiz. The purpose, especially after Telecom 96, is to create programming that will hold an

audience between advertisements. It's the advertisers' needs that the offending assumptions are made to meet. Not the listeners.

Radio has two audiences....one is the listeners, the other is the advertisers. The purpose of the radio station is to sell the listeners to the advertisers and present the advertisers to the listeners. To that end, only the advertisers needs matter. And the advertisers call the shots. It's not the Radio stations that determine who are the important listeners. It's the Advertisers. So to serve the listeners the Advertisers find important, Radio looks only at those listeners. Instead of all listeners.

I"m not defending it. But it is what it is.

Anything else is showbiz. And King Kong is never really more than 3'6".

On the broadcast side, unless you hope to get paid by the government for broadcasting propaganda or clandestine traffic, the only other income source would be from advertisers or some other form of sponsorship.

You might also be able to lease space on your antenna(s) to other services like cellphone companies or operators of two-way radio services.

> 2. How does an owner go about establishing a revenue stream from
> potential purchasers of air time.

Presumably, you send them bills, and they pay them.

> 3. Who would the primary customer base be?

People with markets in your target areas.

Hey Bert,

I appreciate your responses. Is there a specific group or entity (other
than FCC) to talk to other tower owners?

Thanks,

Joe

3645. Question regarding Deoxit products

Newsgroup: rec.radio.shortwave
Date: 2006-03-30 18:41:12 UTC
From: junius <junjunius@yahoo.com>
Message-ID: <1143744072.564912.71520@u72g2000cwu.googlegroups.com>
Source record: 69036

So, looking at the Caig website, there is the following run-down on three product lines:

DeoxIT - Contact Cleaner & Rejuvenator - Brings Old Systems Back to Life!

DeoxIT Gold (formerly ProGold) - Contact Conditioner & Protector - Maintains New System Performance!

DeoxIT Shield (formerly PreservIT) - Contact Protector - Maintains New System Performance in Severe Environments!

Okay, so the first of these, DeoxIT is the D5 stuff that everyone in here seems to use for cleaning purposes. I guess, then, that this is what I"m in need of. My question is this: what is this DeoxIT Power Booster that Radio Shack sells along w/DeoxIT Gold? Link below:

http://www.radioshack.com/product/index.jsp?productId=2104746&cp=&kw=deoxit&parentPage=search

Asking because, if it's the case that this Power Booster is the same product as the D5, I'd prefer to pick it up, rather than order it online.

Thanks in advance for any insight provided w/regard to the above question...

Junius

I don't have the data, but I'd take a guess and
say that the top 5 owners of radio stations
probably account for over half of the 13,500.

The ad for "gold" indicates it should be used on
"gold, silver, rhodium, copper, bronze, nickel, etc." Basically, plated
contacts. I suppose that it would not be good for potentiometers.

That said, I just use the plain Deoxit on just about everything. The
only other product I use is calilube (nopefully not renamed).

> years ago?

Actually, there are more stations every year. There were 10,197 in 1995 and 10,731 at the end of 2005 per M Street Directory. There have only been a dozen or so stations going permanently off the air in any average year, and many of these are rural daytimers that got an FM and no longer want the AM or stations that lost licenses in a legal issue or stations that lost a land lease and can not get permits for a new site or AMs that have been bought and deleted to allow another station to improve coverage.

Since the number of stations has increased, even with consolidation, there are nearly as many owners now as in the past. It is just that there are more stations. If you went back to pre-Docket 80-90, there were over 1200 less stations in the late 80's than in 1995.
>
> 2) 3500 is much less than half of 13,500, implying that the majority
> of owners own more than one station. "Most" are small? NO.

A lot have always been small, even with multiple owners. The owner of an AM/FM in 1965 in Independence, Iowa is still a small owner, then or now.

A good example of a small owner from 1960: Les Biederman's Paul Bunyan Network out of WTCM in Traverse City, MI. Class IV AMs (250 watts) in Traverse City, another Class IV in Petosky, another in Alpena and one, I think, in Cadillac. This is hardly "big" as these are tiny markets and tiny stations. There are and always have been thousands of AM and FM combos that count as multiple ownership, and many hundreds of tiny groups with two, three, four stations in a rural section of a state. This goes back to the 40's in fact.

>> I deal in the Census, proprietary data and talking with listeners. Market

I have no idea what you are talking about here. The WSJ is about
investments, not about the local market operation of radio stations.

> sir, are full of shit.

We know we have listeners outside our markets. We know we can not monetize
it. So we ignore that listener base, as it can neither be served due to
distance and existence of local stations nor can any revenue be generated
from it.

Who says they are "massaged?" You? Radio stations which operate commercially
try to get themost accurate data on thier listeners and competiton possible.
They do not massage it.
>
>>
>> Advertisers support over 11 thousand US stations. they demand a

The syndicated ratings data is good enough to use for the sale of
advertising. For anything else, stations do internal research that is
proprietary. It is all that is necessary... and the costs have to be limited
to the dimensions of the total radio ad dollars available and which would
not expand if more or bigger research were done.

The top 5 owners account for 14.7% of the total. By the time you get to the top 10, you still do not have 20% of the total. The #10 company only owns 68 stations. #20 owns 35. #30 owns 22. So there are less than 30 companies that own more than the pre-consolidation 14/14 limits.

You'll need more than a single tower. If I'm not mistaken, the FCC requires SW broadcasters to have some sort of directional array. I suppose a Yagi or quad could be operated from a single tower, but those normally are good for only a single band and they are cumbersome at the most used SW frequencies.

> The land is located

WRNO in New Orleans tried something like that. I don't think it ever made money. There's a bunch of domestic SW transmitters now, and nearly all the programming consists of fringe evangalists, conspiracy theorists and wierdos. It's my suspicion that these guys are far more entertaining for the listener rather than for the broadcaster.

>
> Questions for the group:
>
> 1. What are the potential financial rewards for owning and operating a
> short wave radio transmitter/tower?

A couple of years ago, Dave Frantz was soliciting people to buy time on WWRB for $25.00 a half hour. Considering all the expenses, it sounds like a good way to turn billionaires into millionaires!

>
> 2. How does an owner go about establishing a revenue stream from

Get paid in advance. Brother Stair has claimed he pays as little as seven or eight dollars an hour for SW airtime.

>
> 3. Who would the primary customer base be?

Give the dial a spin and listen to who is currently buying time on the other US SW outlets. I suspect your first contacts will be guys who've been kicked off WWCR, WWRB, WRMI and the others for not paying their bills.

Has anyone used NiMh batteries in conjunction with the charging unit in the Grundig Satellit 700? Will it charge them without damage to the battery or the radio?

Also, I'm looking for EPROM chips to use with this radio. Who might have them and do you know any chip type numbers? Thanks in advance.
B.

Hi DrJoe,
Well, you have a lot of questions. This indicates that you probably don't
have much experience in the sw broadcast business. If you want answers, I
would think the best thing to do would be to try to talk to some managers at
various sw broadcast stations around the country. Most are government run
or managed by a certain church denomination. There aren't many strictly
commercial sw stations in the USA that I know of.. Some you might talk to
are WWCR, WHRI, VOA, etc. Send them an email and try to get a feel for the
business. If you're just looking for a revenue generator, you can get a
tower company to set up a tower and lease out space to cellular, two-way,
teleco microwave, local broadcaster microwave, etc. They usually pay
anywhere from $500 to several thousand per month to lease space on the
tower. Check with some of your local cellular providers. They may even
erect the tower and pad at no charge to you, just to be able to lease land

space from you.

WRNO has been planning a comeback for sometime, though I think H. Katrina put
another crimp in their plans.

They still have frequencies listed for A06 in the FCC database:

http://www.fcc.gov/ib/sand/neg/hf_web/A06FCC01.TXT

See 7355, 7395 and 15420.

I once found a mostly empty spray can of CRC 222 at a scrap metal yard about twenty years ago.The best stuff I have ever used for removing battery corrosion,yes,it was amazing to me how well it worked.When that old can of CRC 222 ran out,I checked the industrial supply stores and some other stores for CRC 222.Not available anymore.I haven't ever used Deoxit before,but I very much doubt if it is much good.

Is it just me, or do others find that in way over 50% of the time that I hear something on "X" frequency at "Y" time, and look it up in Passport, there's NOTHING listed?
Example: Right now, 23:23 on 15.340, I'm hearing some music that sounds like it belongs in some musical. I look in Passport, there is NOTHING listed for that freq/time...
Kind of defeats the purpose of buying the book...

As most folks know PWBR is usually only fairly accurate for the bXX broadcasting season. Anything other than that is merely an educated guess on their part.

We are now in the a06 season.

I'm not so sure. The are the same voltage per cell. Unless there is some
difference in the method of charging, I would think it would be alright. Do
you know anything a bit more technical about charging differences or where I
might find out?

Another private short-wave station is WBCQ. You might find it useful to listen to them (7.415, 5.110, 9.330, and 18.910). It seems to be a labour of love combined with the perils of Pauline. The minimum power requirement of 50,000 watts seems to be a heavy financial load and money problems seem to be right up front. They have been in business for 8 years . <www.wbcq.com>

It doesn't matter if they all are piled on top of each other,
interfering with each other, and programmed 12 at a time out of a
single building playing the same boring pap.

It's a lot of *signals* but not a lot of *content*. Remember the
song, "57 channels and nothing's on?" Now it's radio that is that
way.

Eduardo's response, and my response to it, were based on Mr. Lawson's
comment about a small station in the Cincy market. I suspect he
wasn't referring to a 100 Watt flea-power station but rather a strong
local *indepenent* station. In that sense, it is small.

> The industry may be influenced by CCU and CBS, but it's not owned by

1450 stations based on perhaps 6 formats, all playing the same
computerized lists, with "DJ"'s (in name only) handling a dozen

different stations with a canned set of remarks.

That's domination.

And the other large owners do exactly the same thing. It's those with
the shallow pockets who can't afford to run 100 lights-out operations
from one building who are "forced" to give real programming.

Except that this thread was started by Carter on March 2 in

Message-ID: <wxHNf.55729$dW3.51188@newssvr21.news.prodigy.com>

where he referred to a WSJ article about the *listener
dissatisfaction* with IBOC. No listeners, no ad revenues, no matter
what the crappy model shows. WSJ picked up on that. The "experts"
didn't.

>
> Complaining in a USENET newsgroup is not likely to make a big

> >
>
>
> That's really unnecessary, Eric. And beneath you.

Why? Seriously, why?

Some station is fulfilling a niche market and making a good steady profit, but wants to stretch a little. Eduardo's "services" are brought in, and he tells them, nonono, you don't have listeners 22 miles away, but you do 21 miles away -- this chart proves it. And you'll never make any *real* money in your niche; you have to sell the same bland pap as the other 15 stations that can be heard on your boom box but don't really exist here, but the listeners 22 miles away hear perfectly. Switch to the pap and you'll be rich, Rich, RICH!!! Here's my bill -- cash, small bills, nonsequential only.

That's bullshit. And he peddles it. And radio is poorer for it.

> For that you look at what's under the bell curve.

STOP RIGHT THERE!!!!

Who the FUCK says that a bell curve -- a normal distribution -- applies to the model? Prove that the assumption is valid before continuing at all.

> The mean plus one
> standard deviation, if that.

Which picks up a big chunk of non-normal distributions even though sigma may not apply. Because they pick up *some* people, they assume they got most of them.

They are wrong.

> Strictly commodity thinking.

Yup, going for the lowest hanging fruit because it's easy. 13,500 stations fighting for them, while the rest of the tree is ignored.

>
> Does this orphan real listeners? Yes. Are there numbers of them? Yes.
> Do they matter? No, because expressed as a percentage of the defined
> target, they're statically insignificant, AND they are more likely to be
> wasted impressions.

Only based on the model. The model must be validated, first, and I don't believe it is remotely close.

> It's cold. But this is how the agencies actually spend money. And
> advertisers call the shots.

But they get their info from people like Eduardo, with a broken model. It doesn't matter if everyone tells you the sky is green -- it isn't. No amount of marketing will change that.

The earth isn't flat; the sky isn't green; and the model is wrong.

> And again, it's not radio stations that create these models. It's
> advertisers. Do radio stations adopt them? Sure they do. There's money
> in it.

Sure, everyone goes for the least effort. But they aren't maximizing
their reach.

> But they don't create them. They get them from resources serving
> the people with the money.

That's Eduardo. And he still is full of shit.

> So, while I don't really have any use for consultancies in Radio,
> what David does is show the Radio Station how to maximize it's
> profitability. So the station may serve it's investors/stockholders.

At the expense of listeners, the ultimate source of revenue. The
listeners have other choices now, and will go away. The points I made
to Mr. Lawson about why anyone wants to listen now are valid, but that
isn't the music biz -- that's the news junkies. They're only a
moderate amount of the market, and the other formats will slowly
shrink.

>
> I"m not defending it. But it is what it is.

I disagree. You are defending it -- passively -- by being fatalistic:
"I can't change it so it will be that way forever and ever, amen."
But it won't be -- the rest of the world is changing and more
entertainment options are out there and that number will increase.

Radio and its myopic model is killing itself. It will doubtless
change as the problems become increasingly difficult to ignore, but by
then much damage will be done. The WSJ, home of the capitalist, will
have been one of the first in the business world to notice.

I suspect that IBOC will be a casualty of radio's decline and change
of direction. A poorly thought out solution to a problem that doesn't
exist.

Eduardo can sit, fat and happy with pockets full of wads of cash, but
radio itself will suffer because of what he does to it.

There's also the issue of your target audience. By law, shortwave broadcasters in the U.S. cannot target the U.S. as an audience. Of course the private ones do so, but that's because they follow the letter, if not the spirit of the law.

I think some more fundamental questions need to be asked: What is your goal? Hobby/fulfillment of a dream? Making money? Spreading a certain message to a certain area/demographic?

After you answer that question, the next question is, what is the best way to fulfill that goal? (Note that I didn't say, "How can a shortwave transmitting site help me reach that goal.")

Unless the shortwave transmitter is an end unto itself, you may find yourself in way over your head. I can't imagine trying it.

(If I were trying to reach an american audience via shortwave, I'd set up in a foreign country that allowed private ownership of a shortwave transmitter.)

Good luck, whatever you do -- and if you do pursue this, keep us posted. It will be an interesting story, and I know I'd like to hear about it!

That's true. I think Eton must keep them in business.

I enjoy the book, and have bought it for the three past years. I personally think they should condense the book a bit, lower the price to about fifteen bucks US, and release two a year. One for "winter", one for "summer." That way they could update things every six months. It would definitely help the schedules sections. They could split up the reviews...maybe the winter issue could handle tabletop receivers and antennas, and the summer one could focus on portables, or something. I mean, let's face it, there aren't that many new receivers that come out every year anyway. Also, rather than just one feature story per year (which is usually excellently written), they could possibly do two.

As far as more accurate sources, primetimeshortwave.com is great, I just wish it was a little more interactive in letting you search for things, rather than having to scroll by time or frequency.

You addressed nothing of the real point. David consults radio. But the data are created, modeled and excecuted by ADVERTISERS. David doesn't create the model...Advertisers do. David only tells the stations how to maximize their performance within the model created by advertisers and those who serve them. That's not David. He doesn't create the tool. He only shows how to use it.

But you're not paying attention to tha that point. And that, too, is beneath you, Eric.

Don't get me wrong, I understand your frustration. I'm no less frustrated than you are. But the business doesn't work to serve the likes of you and me. It works to serve itself. And we're not the ones being servered today. There are, however MILLIONS who do believe they're being served by Radio today (whether or not they really are), and as long as they continue to use radio as they are, advertisers will continue to use Radio as THEY are.

That's not David's fault. He doesn't create the tool, he only shows the stations how to use it to meet advertisers wants. It's the advertisers who create the tool. If you want to be angry at someone, start there.

Affect the bottom line, you creat change.

Going back to the original post, you said you want to target Mexico and Central America. What kind of programming would you plan on providing? Spanish language talk? Music? News coverage?

Someone suggested clandestine broadcasting. I'm not sure how or if the US government contracts private broadcasters to conduct clandestine broadcasting, but I'd imagine it could happen. Maybe you could target Cuba...

It sounds like an interesting idea, just that you might have to flesh it out a little more, as others have said.

> Exposing Shocking Horrors Inside China's Concentration Camp

100 year old international Hong Kong news agency go to Sujiatun and
Lanzhou University to investigate Epoch Times' allegations, and they
find a pile of hooey:

* Lanzhou University student registry doesn't have students named in
Epoch Time's article, no one has been arrested as alleged:
http://groups.google.com/group/soc.culture.china/msg/91ee0e42566d1f0c

* Reporters investigate concentration camp at Sujiatun stroke clinic
find no evidence:
http://groups.google.com/group/soc.culture.china/msg/e2349b8ca53de2ec

Here's bio of TaKungPao.com: a web division of 100 year old Hong Kong
newspaper TaKungPao that sells 45% of it's papers in US and Canada:

http://www.takungpao.com/inc/ziliao/introduce.asp

> single building playing the same boring pap.

They are all in accordance with the FCC's technical rules. They do not interfere in areas where, per the FCC's tables, the signals are usable. In fact, signals are protected to far greater extremes in the USA than in any other country in the world that has commercial radio in it.

For example, Mexico allows stations in the same city to be only 20 kHz apart on AM, and only separated by one channel on FM. And they allow far higher powers, yet allocate other stations on the same or adjacent channels far closer together.

As to the content, radio programs what will get audiences large enough for advertisers to be interested (with the exception of brokered and religious staitons, which program whatever is paid for generally). That reduces the chances of having a reggae station in Minneapolis or a Jazz station in Cleveland. Since the US has realtively unregionalized taste, the same formats are going to be available in every city in the country.

A small station is one with low power and limited coverage. Period. It is not a term ever used to describe a big station with local ownership.

> 1450 stations based on perhaps 6 formats, all playing the same
> computerized lists, with "DJ"'s (in name only) handling a dozen
> different stations with a canned set of remarks.

Actually, it is currently 1180 stations for Clear Channel, with nobody else having over 400, and the 10th largest company not even havingg 70.

Voice tracking has been used since the late 60's, and is not that common today compared with the 70's and 80's.

> And the other large owners do exactly the same thing. It's those with
> the shallow pockets who can't afford to run 100 lights-out operations
> from one building who are "forced" to give real programming.

The most you can have "in one building" are 8 in the US. Compare thaat to groups with up to 14 in Mexico, where radio is economically far better off than in the US.

Three are very few "lights off" operations except in small markets, where automation has allowed stations to remain on 24/7 where they used to sign off overnight.
>
> where he referred to a WSJ article about the *listener
> dissatisfaction* with IBOC. No listeners, no ad revenues, no matter
> what the crappy model shows. WSJ picked up on that. The "experts"
> didn't.

The article is a classic "jump the gun" publication. there are very few HD radios out there, and until a few months ago, the only ones were targeted at station engineers who were installing HD. The timetable for HD is to get more HD-2 channels on in the top 50 markets this year, and roll out advertising and new radios around the holidays and at CES 2007. This is a multi-year project.

Eveyone I know who has listend to HD or an HD 2 channel loves it.

> brought in, and he tells them, nonono, you don't have listeners 22
> miles away, but you do 21 miles away -- this chart proves it.

You don't get it. One, I work for one company in the US and no one else. I am not "brought in" for anything.

Second, markets are defined by a combination of the OMB and Arbitron's own clients. Advertisers budget by market, and the market budget is spent on local staitons, whether there are any non-locals being heard there or not. To do any other thing is too much pain for no gain by the advertising agency, so they do not do it.

Individual radio stations do not define markets.

> And
> you'll never make any *real* money in your niche; you have to sell the

> my bill -- cash, small bills, nonsequential only.

I have no idea what you are talking about here. Stations program for local markets. This is because on air advertising is only one of the services they provide. the most importent part of the services is the client servicing, including commercial preparation, client consultation, remotes, in-store promotions, marketing events, concerts, street appearnaces and dozens of other things. None of this can be done for listeners outside the metro as the costs vs. benefits do not have a favorable balance. And, mostly, because the advertisers DON't WANT OUT OF MARKET STATIONS:
>

> At the expense of listeners, the ultimate source of revenue. The
> listeners have other choices now, and will go away.

No, the source of revenue is advertisers for radio. To get them, the station must provide ears. More ears, more revenue. Better programming, more ears.

That is not about local radio sales and programming. It is about HD radio by
someone who does not understand radio written well before the new HD content
started to become available. Poppycock, in other words.

Actually, I work fulltime for the 9th largest radio company in the US. I only do consulting in Latin America when the time permits... which with the present 70 hour weeks, it does not permit much of.

Keep in mind, also, that the average Latin American city has far more radio stations than the Average US city. So many, that it is really absurd to think many people would find anything on SW, from the US, that would be better than the multitude of clean, local signals.

Argentina, with about 37 million population, has 8,300 radio stations. The US, with nearly 300 million, has 13,500.

Why would anyone thing that there is anything that listeners in Latin America would want to hear that a broadcaster who has to ask questions on this board could provide.

Here's my idea: a studio where various immigrant groups, many of them people from vital parts of the world (Iran, Afghanistan, Pakistan), that live in California produce programs with honest, uncensored news about their homelands and that show how great their lives are in the US. We could have sermons and Quran readings from liberal imams. Then contact a transmitter broker like TDP and buy airtime on strategically located, already existing tx's. This effort would be funded by some rich people and by fundraisers in the immigrant communities. It would be sort of a bottom-up VOA, a station singing the praises of America by the countrymen of the oppressed peoples. I call it Radio California, but it wouldn't be licensed and it wouldn't have an exclusive transmitter farm. What do you think?

Radio is an ART, accountants and advertisers do not, and never will understand art. You can't sweep water up a hill, and you can't make a pig sing. The money radio makes is not plowed back into the art, but skimmed off for the business. Corporations are like sharks and only notice whether the wallet is getting fatter or thinner, and will do ANYTHING to keep it getting fatter. They also look down at their feet while they are walking, which means they aren't looking where they're going. This ensures that they will walk into walls or other obstructions, this is why radio has been shooting itself in the feet every step they take. Vampires ought pull out at least once in a while to let the host recuperate. Go ahead, keep sucking, watch radio die. The din of Ibiquity IS the sound of the last few drops of life blood being suctioned out.

Actually, it's more simple than that. I'm among those no longer
being served. So I, too, have largely abandoned Radio as a member of the
audience. I listen far less than I used to. They don't care, they won't
miss me.

And I can't change the way Radio does business. My influence, even
from the inside, was minimal. Why? Because the issue isn't coming from
within Radio. It comes from the outside through advertisers and
investors. I actually have more influence now, by directly consulting
advertisers, than I ever had on the inside at Radio.

But the effect is still minimal. Because the mechanics of how money
is spent on advertising works. There's little motivation to change it.

> But it won't be -- the rest of the world is changing and more
> entertainment options are out there and that number will increase.

Yes, it will. And Radio will adapt. In the car I listen to my iPod. At home, other than shortwave (what's left of it), there are a couple of stations I listen to occasionally for music. WFMT, WDRV are two. And WLS when I'm in the mood for talk. And some WBEZ on weekends. The AM dial is trashed by IBOC hash, here...even WGN is tough to read cleanly. So, my listening options are getting slim, but of what's there, little interests me. The bulk of what I listen to are Radio alternatives: XM, CD's. A bit of occasional vinyl. Or just sitting out on the banks of the lake with a Dr Pepper and the dog listening to the birds, the waves and the boats. Which saves a lot on batteries.

As a clinical phycologist,you could examine politicians from afar like Dr.Justin Frank examined bush and you could give your opinions about those crazy insane politicians.(they are all crazy and insane,ya know)

Hmmm,,, I own a half acre of land in Putnam County,Florida.(Northeast Florida) It is sort of out in the sticks,so to speak.I wonder if I could get a cell phone company or two or three or whatever in that that area to put up a tower (all at their own expense,of course) and pay me a bunch of bucks each month?

part of U.S.federal government's plan to destroy Analog Radio?
google that if y'all want to.
I say it IS part of fed govts plan.

A couple of weeks ago,someone in another news group said the reason for digital radio broadcasting is to free up more space for cops and Firefighters.
Is that true?

The Addresses Plus section is pretty decent, too, I'd say.

A better editing job could be done on PWBR, though. On the WL-500 review in this year's Passport, it's stated that the unit has been discontinued; nevertheless, it's written that "this is a new model" in the next to last note (a failure to update a comment from the year in which the antenna was first reviewed). I laughed aloud when I saw that Eton's toll-free tech support was listed as one of the Eton Mini 300PE's "Cons". Is their tech support THAT bad??

Preachers, preachers, preachers.

To the best of my knowledge, WWCR is profitable. I don't think you're
going to find shortwave broadcasting to be a route to riches though.
WWCR's owners had years of experience with similar programming on
regular AM stations before they tried shortwave.

No. IBOC digital doesn't open up any spectrum - it operates in the guard bands between existing stations. (and on AM, on top of existing stations) Should digital see enough uptake to make it possible to shut down analog transmitters, the spectrum previously used by the analog signal will almost certainly be used to allow the digital broadcasters to transmit more programs.

Digital *TV* will in part open up space for public safety radio. Four of the "Upper 700MHz Band" channels are reserved for this purpose. It is not entirely clear whether this extra space will actually accomplish anything... (unless you're a lobbyist or politician!)

I was driving near Harrisburg Pa and spotted WMLKs set-up.
http://wmlkradio.net/Images/fieldshot.jpg
It doesn't look that complicated.

What you would want to do is find some religious whack-jobs to lease
your land and have them build the transmitter by passing the hat. Put
in the lease some clause that if they don't pay the rent you get to
repossess the transmitter. Then you could rent it out to the enemies of
the New World Order or some other religious whack job(s).

If you look at it like a land bank, it may not be that stupid of a
deal. This presumes you have no better use for the land (storage units,
graveyard, etc.).

Brian O - David was right ~ RHF

Think of it like this :
A 40 Watt and 100 Watt incandescent Light Bulb may both fit in the same Standard Light Socket -but- Their Internal Resistance is different along with their Power Consumption and Dissipation. The same size NiCad and NiMH Batteries may have the same outward physical characteristics -but- Their Internal Electrical Characteristics are Different and thus a Charger built for a NiCad Battery with not effectively work for a NiMH Battery and may be in-fact Hazardous {Un-Safe} to do so.

His interest is in maintaining the status quo as defined by...
whomever. Advertisers don't care about radio; they care about
selling. They have specialists they turn to for information about how
to sell to rado. They have different specialists for information
about selling to TV, or newspapers, or direct marketing, or whatever.

His interest is in supporting the model. But it's more than an
interest to him; it's a slavish devotion to the model: His words!
"The numbers are the facts." Numbers only represent something. If he
clung to that belief in MY field, he'd be unemployed.

> But you're not paying attention to tha that point. And that, too, is
> beneath you, Eric.

No, I am paying attention to that fact. But I don't accept the idea
that Eduardo is "just doing what the advertisers want." He is part of
the problem and is part of perpetuating the problem. He is NOT part
of the solution.

Oh, his stations will make money over the next 3-5 years, and for a
corporate holding company, that's all that matters. All they really
care about is the quarterly statement for THIS quarter, after all.

But in the long run, it will decline. The holding companies will
eventually sell off or close down the stations, and radio will change.

But that change will come about because of his NEGATIVE impact on
radio.

And "Little Boy" was only 28 inches wide, 120 inches long, weighing 8,900 lbs.
Some yield figures I have seen estimate the equivalent to be 15 - 16 kilotons.

"Fat Man" was 62.5 inches wide, 128 inches long, weighing 10,300 lbs.
Yielding about 21 kilotons.

They were different in that "Little Boy" was a gun assembly weapon using
uranium U-235 and "Fat Man" was an implosion assembly weapon using plutonium.

That's correct. That's absolutely correct. AND THEY call the shots.

They have specialists they turn to for information about how
> to sell to rado. They have different specialists for information
> about selling to TV, or newspapers, or direct marketing, or whatever.

Advertisers do not sell to Radio, TV, newspapers, etc, they BUY from
them. Advertisers buy media. And they do it based on their data, their
numbers and their own wants or needs.

>
> His interest is in supporting the model. But it's more than an

> "The numbers are the facts." Numbers only represent something. If he
> clung to that belief in MY field, he'd be unemployed.

His expression is an oversimplification. Numbers are truly
representations. But they're bought by advertisers as facts. It's
advertisers who create the numbers, the model and they call the shots.
In that context, numbers are facts, because there is nothing beyond them
to the people who call the shots.

Again, exactly right.

>
> But in the long run, it will decline. The holding companies will
> eventually sell off or close down the stations, and radio will change.

Also true. But it will survive. Perhaqs not in the form you recognize
today, but it will survive.

>
> But that change will come about because of his NEGATIVE impact on
> radio.
>

No, that change will come about because of the need to respond to
advertisers changing needs in a climate of changing realities. David's
impact, like a program director's, or any consultant's, is in the area
of keeping the numbers saleable on a shifting sales landscape. Again,
his impact will be in facilitating the changes necessary to respond to
changing competitive realities: impact toward survival of the medium, by
continuing to maintain the revenue stream as alternative media present
themselves. Survival is not negative.

But consider this: As competitive alternatives present themselves,
and Radio adapts to survive, the negative impact of current advertiser
policies and practices will have to change as well. This is the impetus
behind CCU's "Less is More" policy. Its the reason, the VERY reason, why
XM changed their own advertising availablities while they still had
control over them, shifting primary revenue focus from advertising to
subscription. David, and his like and kind, will be instrumental in
showing Radio how to survive in wake of those advertising policy and
practice changes.

As you have said, and rightly so, programming is what holds
listeners. To survive, Radio will have to create opportunities through
programming to hold onto the numbers. David and his like and kind will
be the ones showing them how to do that.

To get an accuarte technical explaination. I found the people in the
electronics group to be very helpful. Thank you for your kindness.
B

"Asking about the difference between NiCd & NiMH battery chargers -

The Cadex site (www.cadex.com) says that there are important differences between the chargers. They claim that:

The charge termination criterion is different. Most NiCd chargers stop (or transition to trickle charge) on a characteristic voltage drop. The NiMH voltage drop is more subtle. Most NiMH chargers transition based on temperature.

The NiMH cell requires a smaller trickle charge. "A trickle charge that is acceptable for the NiCd will overheat the NiMH and cause irreversible damage."

In this case, I defer to the M Street data. M Street's Directory has the credibility today that the Boradcasting Yearbook had from 938 to the early 90's.

In any case, I checked with BIA, a daily-updated directory that costs over $10 k a year. It shows Clear Channel today at 1176 statons, Not even 10%.
>
>>
>> The most you can have "in one building" are 8 in the US.

I do not know what "Complex" you are referring to, but suspect you think they broadcast out of a dungeon in San Antonio with hundreds of studios, which they don't.
>>
>> The article is a classic "jump the gun" publication.
>
> Oh, yeah, the WSJ is well known for getting waaay ahead of the curve.

They were so far ahead of the curve that there were no consumer targeted radios on the market when they did hte article. In addition, no station had an HD 2 channel running at the time, and the algorhithm was not final and the design specs for consumer radios had not been released to manufacturers.

> Get real. They saw what you refuse to.

We see considerable interest in bothe the improved quality of existing stations and the HD 2 channels. What we do not see yet by design is the next generation of radios or the launch campaign, which are not yet ready to go waiting on more content in more markets.
>
> Maybe you should read Peter's post where he refers to the IBOC hash
> decreasing the number of listeners he has. Clearly he's suffering
> from delusions, too, then?

In several markets, the HD signal covers more than the usable analog signal
of our AMs due to is robust resistence to interference and noise, and the FM
HD looks usable beyond the 64 dbu contour on FM... which is where nearly 99%
of all measured listening stops in major US markets.
>>
>> Eveyone I know who has listend to HD or an HD 2 channel loves it.
>
> I bet "nobody you know voted for Nixon," either.

I campaigned for him as a kid in '60. I did not vote for him in his second
go at it, as residents of Puerto Rico are denied the vote. My family all
voted for him. My mother was Cuyahoga County campaign manager for Nxon Lodge
in 1960, in fact. So I knew hundreds who voted for him. Most are probably
dead now, though.

> Or Bush.

Not only did I vote for him, two of my associates have met him in the White
House.

So, your suppositions are crazy and wrong and, of course, irrelevant.

> But that
> famous statement is just as wrong as yours. When you look only at a
> scewed sample, you will see a scewed result.

A "screwed sample" consisted of a random sample who was given a blind taste
test. Every listener liked HD better than the same station in analog.

>> No, the source of revenue is advertisers for radio. To get them, the
>> station
>> must provide ears. More ears, more revenue. Better programming, more

>>
>
> No listeners, no advertisers. The advertisers don't bring the
> listeners; it's the other way around.

Programming brings listeners. That is what have done since 1964... or all
but 4 years of my career. Better programming = more listeners. More
listeners = more revenue.

Source record: 69192

Dear Jim,

PASSPORT's "What's On Tonight" section is fairly accurate, based on information available at presstime and educated guesses. The "Blue Pages" frequency list is more accurate when the book is first available, growing somewhat less so as time goes on and as we enter the summer schedule. PASSPORT is at its strongest with regard to its product reviews which are, in my opinion, the finest available. While not totally "unbiased" (as long as you have human beings you will have bias!) they are far more informative and accurate than, say, users opinions on eHam, etc., valuable as those are. PASSPORT actually uses laboratory instruments to measure the SW products being tested and I know of no other source which does that.

For frequency schedules, WRTH is more accurate, as it is published later in the year than is PASSPORT, and WRTH updates their frequency list online when the summer season starts. WRTH has far more frequency and station information than does PASSPORT, especially for MW and/or TV DXers.. WRTH is weaker with regard to product reviews.

PrimeTimeShortwave is, in my experience, the most accurate and up-to-date schedule list and is updated very fast. However, its main limitation is that it does not show what "shows" are playing (and, of course, you have to be "online" to read it or download it). I personally still prefer looking things up in a book though, of course, I realize that an online list can be inherently more accurate.

All that said, I find both PASSPORT and WRTH to be invaluable guides and I buy them every year. Frankly, I don't see how a serious SWL can do without them. I couldn't! Of course, I also make use of whatever other sources of information I can. They ALL have their place.

Best,

Joe

3752. Re: ILG Radio Database for the A06

Source record: 69193

Dear "Helmsman,"

Based on past experience, I did not expect to see the A06 schedule in the ILG database for several weeks. Nonetheless, I checked them yesterday morning and, of course, it was not there. They must have posted it after I checked!

Thanks much for the "heads-up." I just got my new password and downloaded the file.

I wonder if my password will be "good" for the entire A06 season (their revisions and updates) or if I will have to get a new password each time I want to download a new file.

In any case, the process is fast and easy.

Thanks again!

Best,

Joe

Speaking of mushroom clouds, here is what one official said...(as per the news report)...

"It is the first time in Nevada that you'll see a mushroom cloud ... since we stopped testing nuclear weapons (in 1992)," James Tegnelia, head of the Pentagon's Defense Threat Reduction Agency, told reporters Thursday.

Am I wrong, or weren't the latter-day atomic tests conducted in Nevada all subsurface at rather large depths? I didn't think any surface detonations of nuclear weapons had occured since well before the 1990's, maybe back to the '60's...I recall seeing newsfilm of the surface during and underground nuclear test, and the scene looked like what it was, an underground explosion, with some surface disruption across a ciruclar area, but no "mushroom cloud" at all - more like somebody banging on the side of a round pan filled with dirt and having it vibrate and ripple.

Anyone have a date on the last above-ground test in the U.S.?

>Anyone have a date on the last above-ground test in the U.S.?

Bruce Jensen <

Well! Just found an answer to my own question...

>From http://nuclearweaponarchive.org/Usa/Tests/index.html -
"Atmospheric testing concluded with the test Dominic/Fishbowl Tightrope on 4 November 1962. The signing of the Atmospheric Test Ban Treaty on 5 August 1963 in Moscow halted all further atmospheric testing by both superpowers. "

After that time, all newly scheduled nuclear tests were underground, and (presumably) did not generate a mushroom cloud.

This is not say that conventional weapons tests after that 1962-63 date would not have resulted in such a cloud - but James Tegnelia's quote suggests that the end of mushroom clouds is linked with the start of the 1992 test ban treaty.

I once read somewhere (I dont remember where or when) that some of those underground nuke test's in Nevada are still venting into the air.I dont know if that is true or not.I bet some Geiger Counter equipment would tell.

I own an old hand held Geiger Counter (it is yellow and it has CD markings on it) that I bought for five dollars years ago at a Goodwill store.There is a Museum somewhere in U.S.A.that has a lot of old Geiger Counters and related thingys on display.

I think the model of Geiger Counter I own is one they are looking for,for the Museum.I am not going to get rid of my old Geiger Counter.I dont think it works anyway.Some sort of a hermetically sealed tube thingy that probally needs to be replaced with one that works properly.I like to collect all kinds of old things and I dont get rid of my old things either.

The plan the original poster presented, broadcasting into Latin America from a Gulf State, was pretty much what WRNO tried. But, it's my impression that big time advertisers weren't interested because they didn't know how many people were actually listening. WRNO's rhombic antenna also put a HUGE signal up through the Northern US Midwest and the center of Canada. They couldn't get their commercial radio model to work, so they ended taking just about any programming which came along. I think it was WRNO which was embarassed into cancelling a Nazi leaning racist program which was broadcast in German.

The other issue is that ads for each country in Latin America are placed locally... there was no ad market for 20 different countries on one station. Since, in Latin America, there is a distributor for each nation, the ad budgets are strictly by country and not consolidated. Even creative is different, owing to the vast differences in language. The word for bus in the Antilles means baby in Ecuador. The word for "take" in many countries means "have intercourse" in Mexico... so there is no way of consolidating.

As the saying goes, "20 nations separated by one langauge."

Actually, (I've got some old postings about this) Cramonlin disappeared
in the US when the people in Germany who made it got hacked off at Caig,
who were claiming that they invented it. So Caig cloned it and named
it DeOxit. Cramolin is still made there, and I hear that you can get
at foreign brand automotive suppliers, as it's the preferred cure for
electrical problems in various German car lines.

It is possible that a bomb of fertlizer and petroleum is more stable than the rather unstable and dangerous TNT and is therefore easier to deliver - or, perhaps they are looking for an explosion with the specific characteristics that fert/petro bring to the table. It is also possible (maybe likely) that they are just checking to see if their calcs are right on this style of bomb. I admit, I do not know much about this topic, so I am talking out my hat, but just some cud for rumination...

>Isn't nitrate the major component in either formulation?<

Sure is - but as you know, some nitrate-based explosives are far more volatile and subject to destablization during movement than others (liquid nitroglycerine is notoriously unstable). Dynamite and TNT are better and improve on the original liquid formula (thanks, Alfred!); but I was simply suggesting that this recipe might yet improve on the others. Again, my knowledge is limited, so if you think this is just too off-the-wall - it probably is!

Hanford was the one producing the plutonium whilst Oak Ridge was doing the U-235. Some demonstration work was done earlier on at Oak Ridge with regards to the process for producing plutonium from uranium, but the material for "Fat Boy" came from Hanford.

WAIF is small enough; it's hard to be heard beyond
the I-275 loop (about a 15 mile radius or so). WOBO
way out on the east side of the loop is hard to hear
on the western edge of the loop without an outside
antenna. The same thing goes with some of the other
stations I mentioned. The big one range-wise of the
stations is WGUC (no longer affiliated with UC, btw),
which can reach about 50-60 mile radius. I don't know
the wattage off the top of my head, but I could
hear it in Dayton and I could hear it in Carrolton, KY.

AFAIK, it does exist. They used to have occasional
pieces in the paper about how they run 10 or so MIX
stations out of one location, and the DJ has to
constantly read up on newspapers on all the localities
to keep up and sound local.

Then again, the agressive nature of Clear Channel
is kind of inherited from Jacor, who as memory
serves, back in the mid-80's bought the competing
album oriented rock station, and then was forced
by the FCC to sell it. Of course, they sold it after
they converted the format to country, so they
wouldn't have any competition. And they took
the best DJs, too.

You know David, lots of people in the Vegas area work for the govt, and believe me, if this had any, repeat any radiation involved, the word would have gotten out a long time ago. No way would the local papers, TV, etc keep quiet on this, and the memories of relatives that got cancer due to the above ground nuke tests would make a lot of people flip out if there was any nuke involved.

I'm sure there will be people with geiger counters downwind, checking anyway.

There is no such facility. Never has been. When out of market talent is used to voice track specific shifts, the only thing sent to the station are the voice "clips" which are sent over a WAN from one digital workstation to another. The clips are played, along with music, local commercials, and whatever else the local station does, in each market.

They had to sell it when Jacor and Clear merged, as it put them over the maximum locl market cap. This happened in about 20 markets, in fact.

> Of course, they sold it after
> they converted the format to country, so they
> wouldn't have any competition.

What prevented the owner from flipping back? Or another station form changing? There are no restrictions on format changes in the USA:

> And they took
> the best DJs, too.

Maybe they _wanted_ to continue to work for the company. If they didn't, they could have resigned and been hired elsewhere. There are no slaves in US radio.

You are referring to the Atomic Museum in Las Vegas. The last time I was there, they didn't seem to be hurting for Geiger counters. In the days when they were in North Las Vegas and nobody went there, I brought in my geiger counter and did a comparison with their calibrated counters. [Close enough match for government work.] They have a few sources such as gas lantern mantles. The also have a nice collection of dosimeters.

http://www.ntshf.org/aboutatm.htm

Technically, there would be no release from an underground test to the atmosphere. [The water table is another story.] However, they do a drill back to analyze the explosion, and this vents radioactive gasses.

For above ground testing, the spot off the test site that got hit often is Queen City Summit. It is a summit, but there is no city full of queens there.

World Wide Radio GUN Net Broadcast on ZFM
« Thread Started on Today at 7:12am »

Lennie

The Gun Discussion has Gone Bananas !!!

Thanks for recording the news this morning
When I was a breakfast announcer I always had a
cup of tea . I worked on air in Australia,
New Zealand,England and Israel

I never worked in Gunland though. Always wanted to

Posters here (everyone) are invited to participate in a special
60 Minute Talkback Radio program on GUNS to be broadcast to everyone in
the world hy ZFM on the net in two weeks time.

Millions will hear it

Its time to leave the stone age and it will be interesting to see how
many people can use talking emails as a form of communication

Step 1 is

http://www.radiotalkback.net/page2.html

Step 2

Send it to

talkback@zfm.com.au

thats talkback at zfm dot com dot au

Step 3 is to tell us on this board here that you have sent a comment.

Step 4 is to listen on your compter. All comments will be broacast
being Pro or Anti Gun.

Keep your comments to 60 Seconds and intro them with

Hi Im(Your name) fromTown/Country

Close your Opinion with. And thats What I think !!!!!

Think about what you are going to say

Words are bullets

especially when spoken

Keith

Full credits and the URL of this board will be advertised Free of
Charge during the Hour Program to say thanks.
As well as your comments we hope to have some from people like the NRA.
Brady,GCA,etc

Nitro Glycerine.My dad worked for Michael Baker Engineers (www.mbakercorp.com home based here in Jackson,Mississippi) from back in the 1930's up to 1965 when I was at Fort Knox,Kentucky,Ordanance Armor school) and he (he was a construction supervisor at Michael Baker Engineers) owned a little wooden box that was supplied by Michael Baker Engineers.

After he passed away,I looked in that little wooden box.I didn't know what all of those little glass vials/tubes of chemicals was all about.I took them over to the Michael Baker Engineers office and let them have them.

I think I remember one of those little glass/vials had a label on there that said Nitro Glycerin.Seems to me those chemicals had something to do with soil testing.

The K7RA Solar Update

SEATTLE, WA, Mar 31, 2006--Sunspots continue to be scarce, although numbers have risen the past couple of days. March 25-27 had zero spots, but then they rose over the next few days to 11, 31 and 35, respectively. Geomagnetic conditions have been nice and stable and should continue that way until April 6.

Even last weekend when there were no sunspots, 10 meters was active during the CQ WPX contest. Bill Hohnstein, K0HA, of Seward, Nebraska reports A35RK in Tonga worked EA8TX in the Canary Islands, a path of nearly 11,000 miles, on March 26 around 2153 UTC. Around that same time, K0HA worked both stations, plus many strong Central and South American stations, ZD8Z on Ascension Island and AH6RF in Hawaii. Bill also copied the ZL2MHF beacon, which runs 10 W to a vertical antenna. His longest-path QSO was with ZL1ANJ, 7709 miles, at 1957 UTC on March 26.

For more information concerning propagation and an explanation of the numbers used in this bulletin see the ARRL Technical Information Service Propagation page. An archive of past bulletins is on the ARRL Web site.

Sunspot numbers for March 23 through 29 were 36, 44, 0, 0, 0, 11 and 31, with a mean of 17.4. The 10.7 cm flux was 76.6, 75.8, 75.6, 73.6, 74.3, 79.3, and 81.7, with a mean of 76.7. Estimated planetary A indices were 5, 4, 7, 7, 9, 6 and 6, with a mean of 6.3. Estimated mid-latitude A indices were 2, 2, 4, 5, 8, 4 and 4, with a mean of 4.1.

Sounds to me like you described the scenario
perfectly. It's all run remotely, only minimal
staff is needed at the site to keep things running.

Here's a story on their recent move to a newer
studio around town:

http://www.enquirer.com/editions/2004/06/02/biz_biz1aclear.html

> > Then again, the agressive nature of Clear Channel
> > is kind of inherited from Jacor, who as memory
> > serves, back in the mid-80's bought the competing

> > by the FCC to sell it.
>
> They had to sell it when Jacor and Clear merged, as it put them over
the
> maximum locl market cap. This happened in about 20 markets, in fact.

No, it was before then, back when you were
allowed to only own one FM and one AM
station in a market.

> > Of course, they sold it after
> > they converted the format to country, so they
> > wouldn't have any competition.
>
> What prevented the owner from flipping back? Or another station form
> changing? There are no restrictions on format changes in the USA:

The new owners changed it back 3 years later
when the country format wasn't selling. Jacor
tried to buy it then, but was rebuffed. Jacor
then signed a deal to program a small third station
with that station's owners, and programmed
a similar format two the first two stations. The
attrition between the three competing stations
caused the owners of the station that Jacor wanted
gone to change formats and sell the station. Then,
the third station changed format to keep from
drawing listeners from their big rock station.

> > And they took
> > the best DJs, too.
>
> Maybe they _wanted_ to continue to work for the company. If they
didn't,
> they could have resigned and been hired elsewhere. There are no
slaves in US
> radio.

Tsk tsk. There are no slaves anywhere, last
I checked. I presume that like anywhere else
there's a merger, there is a "Black Monday"
when heads roll and some few people are
allowed to keep their job if they join the
new company. Otherwise, the new owners
might decide to "go in a different direction"
and can the lot of them. Having survived
several Black Mondays myself, you're just
relieved to have a job.

I buy PTWBR mostly for the equipment reviews. I also like the highlights on various countries' program offerings and their spotlight on a particular region/nation (2006 features China). I find that *sometimes* the blue page schedules are dead-on, but oftentimes they're not. That's why I also have primetimeshortwave.com fired up and ready to search in case I come across a broadcast that is not listed in PTWBR.

When they pass the Guest Worker program make their employers pay all "their guests" Social Service bills - I.E. medical care, education. Then we shall see how much they like "their immigrants".

The farmers don't want to spend the money on modern farming machinery. It is pure greed in a nutshell.

"Verstaldin" <mjmiller@surfglobal.net> wrote in message news:e0jr6g01iiq@enews2.newsguy.com...
Here in Washington state, farmers are complaining because they LIKE their illegal immigrants. It would cost them too much to pay citizens to do the same work. In fact, it was the farmers who started hiring the illegals. How did they ever get their crops in before we declared mexico the 51st state of the union <g> ? Put the farmers in jail LOL.

Nawwww,ya seeeee,,,, When I first bought my half acrea of land in Florida about fourteen years ago.I had the idea I would buy three or four big old house trailers and hook the trailers up all together as one big old house with doorways I would install in the ends of the trailers (of course,I would have my own private house trailer for my own peace and quiet once in a while) and put some double decker bunk beds in them trailers and rent them out to some college girls at the University of Florida in Gainesville,Florida and have my own harem scarem.

I chickened out on that crazy idea.I still think it is a good idea though.

As soon as they think they have a critical mass of subscribers,
they'll see the profit in advertising. They don't want to stop
attracting users who want the commercial-free broadcasts until
critical mass, but as soon as they believe they'll retain a
sizeable enough subscribership while advertising they'll start
commercials.

People laughed at me when The Stain first started on television,
and I predicted that it wouldn't stay a tiny, translucent
broadcaster logo but would evolve into full-color, obtrusive,
animated advertising. People laugh at me now when I predict
that TV will eventually reserve a significant part of the
screen (probably the bottom 15%) for advertising during the
programming. Just watch and see what happens.
